Introduction

Welcome to the first edition of *Regional Transport Statistics*. It is intended that this bulletin will be published annually.

Regional Transport Statistics replaces *Transport Statistics for Metropolitan Areas* which was last published in 2000. It contains over 60 tables bringing together a wide range of GB transport statistics which are available at Government Office Region and country level. Data for Metropolitan Areas are included where these are available.

The information in this Bulletin is intended to complement *Transport Statistics Great Britain* which was published on 11 October. The majority of the information is already available in the public domain or has been available on request. The value of the publication is in the availability for users of a single comprehensive source of regional transport statistics.

The information in this bulletin will shortly be available on the DTLR Transport Statistics website (www.transtat.dft.gov.uk).

I hope that you will find this bulletin useful. I would be interested to receive comments on the content of the bulletin and any suggestions for improvements.

[1] The national average is 1977=100. Hence the values shown represent increases or decreases relative to that national average. For example the mean value of 172.7 for all non-trunk roads in 2000 roads the North East Region implies that defects on these roads were on average 72.7% greater than on urban principal roads nationally in 1977.

[2] London has been excluded because of its small sample size.

[3] This is a weighted average which reflects the distribution of road lengths in each region. As this will differ from the national distribution, the regional figure for all non-trunk will differ from the national even if for each road class the regional index is equal to the corresponding national index.
