

Elizabeth Coxon

Dear BBC,  
Because we are living in such desperate times I will be talking from the ways we can resolve our desperate situation. Therefore my dire desire to see that our children and for that matter adults will get morale education. I value BBC, for it can be most effective instrument for Education on large scale.

Up to now BBC was the source of immorality violence and all kinds of outrage, hopeful to please the public. Some are happy, but most of people realise it is a way of distraction of family life. And if our families fall apart what kind of nation we are going to be? Very sick, as we already sick now.

We all looking for the way to find happiness. And lets face it what people believed and practiced for long generation that more likely to give us happiness than the things conjured up by confuses present generation. More and more people realise that the life beyond is reality and none wants to head for hell.

We can not afford looking at life from secular point of view. Wars are everywhere and lot people die. We never know when we may have our own "11 of September" or when the Meteorite strikes, for it does not matter where? It will effect the whole earth.

So I repeat - Morale education will help us to find Gods protection, making our country more safe.

The rest of the questions are answered by professionals in BBC. but I am sure if you take care of our Morale problems you will have no other problems. If we have peace and harmony beginning with family then we shall have a peace in the world country and lead a way to peace in the world.

You have to find people that can convince viewers that it is in their interests to be good not only because you may end up in jail, but you may bring disaster in to our country. In science it is known that human mind influenced environment so we have calamities accidents and ill fortune (sickness, justice, crime)

BBC must take responsibility to work for the good of humanity to disperse ignorance, there are some wise people in this world will be glad to help. I know enormous amount of people that could help. But it is your responsibility. Save our nation.

Shree God Bless you

Sincerely E Coxon

## THE FOOD FOR THE THOUGHTS

The have been living with a threat of nuclear war for over 50 years. Now we have a threat of asteroids. The scientists before use to be more discreet or in doubt, that it will ever happened. It is possible that they were unwilling to speak openly for fear of creating panic. Now all kinds of terror seem to be no problem, just as the threat of nuclear war, we are conditioned to face our destruction!

On other hand many of us believe in existence of God and "have trust in God" to protect us. I believe that many do, specially Christians. Americans have on their Dollars written: "in God we trust" and it seem that God have not failed them for they seem to have all the luck and their dollar is the measuring stick for the world currency. At one time it were the British that had all the luck, I kept hearing: "and the best of British" (luck), but now it seem our luck to have run out. So how do we get to the way of good luck?

There is one fact is a reality: if a man or a wife in the family come to be involved in the love affair, the family is experiencing the setback and may fall apart as many families do. The suffering of members of the whole family is inevitable, specially children. Then the question arise, is it worthwhile to be married? Means there may not be happiness in marriage for the children, for they lose trust in marriage institution and if the problem on the large scale it does effect nation and eventually the world. Children in such situation are deprived of love, for the need of every child is the love of parents for the child to be normal. Children deprived of parental love become potential criminals. For you can not give that what you were not given therefor unable to love brother, friend and people around, such children filled with resentment. Love is so important for everybody. The reason for our ill luck is so obvious it is the low morale standard.

Once upon a time I see a book on Science. Being a Missionary only have time to read the Scripture and pray. Still I was curious, what would I read if I opened the book at random and I read, "the matter in it's lowest form responds to the mind of a human being." which surely means that our mind can effect our surrounding. Then I pick up anther smallest book I ever seeing. The author was Philosopher James Allen, the title was "The way man thinks" and I was amazed at what he said, in short it tells that our way of thinking we creates the way of our life. Our environment is the result of the way we think. I really feel that must be right.

I feel very strongly that our Media is responsible for our way of thinking, for they are in the position to influence the way people think. They also in the position to take the responsibility to educate peoples way of thinking and it seem that their education should improve our environment and improve our chace of survival.
