To B.B.C. Charter review

Further to your invitation to comment on the B.B.C. I reply as follows

Bear with me when i say that it is estimated that one million people suffer from Migraine in the U.K. add to this the number ,the folk who experience extreme nausea and headaches from fflashes and sudden close movement and we are talking about a lot of people .of which i am one

Extreme close ups 100 mph panning rapid zooming ind out plus manufactuerd flashes all add up to Erratic camerawork equal E.C.... Because of the insistance of 80% of todays producers , each feeling they have to keep with each and todays technology .the use of E.C means all i can watch is 20% of programmes .I can of course watch repeats of Fools and Horses , The Good Life etc What really hurts is not being able watch The Commonwealth games (flasing of the white based logo on screen very frequently. For the same reason i could not watch euifa football , golden football flashed on screen every few seconds at times,we used to be warned on the news if camera flashes were about to be shown

page two

but now for some reason that escapes me , flashes ar given as a link from one picture to next what a state we are in when perhaps a million or m ore of cannot watch such an important programme

I am a keen gardener , but cannot watch such programmes because of Allan Titmarsh and mates walking and working at 90 M.P/H.

The wonderfull nature programmes are no longer watchable . i would never have dreamed that David Atten borough would be so silly.

If I had plenty of cash .I would sue the B.B.C and have the licence fee reduced by 80% for any one that produced a Doctors certificate .If you has a referendum on wether people wanted E>C mode .I think you would be amazed at the result .Please help us  
yours faithfully D.A.Wood Mr
