

The principles that should underpin the strategy

Our starting point is one of principle. Before considering how best to tackle the problems associated with alcohol misuse we need a clear understanding of why Government should play a role at all.

1. Why should the Government get involved in managing the harmful effects of alcohol misuse? At what point does Government intervention become justified?

Government have a role in the well being of its citizens whether they be the victims of illness and injury arising from their alcohol use or the victims of neglect, nuisance, injury or crime and disorder caused by alcohol abuse.

2. How far is alcohol misuse a matter of individual responsibility and when does Government have a responsibility to intervene, whether through services, legislation or persuasion?

It ceases being an issue for the individual when it has a significant detrimental effect on someone in need of the others care or when the activities effect the quality of life of others or put others at risk.

3. How can we strike a balance between individual and community rights and choices?

Each policy - legislation etc will in any case be scrutinised for Human Rights compliance. Substantive 'alcohol' related offences ie. Drink Drive etc will always be clear cut. The blurred edge comes with the results of excessive use or low level nuisance and disorder.

4. What are the respective roles and responsibilities of consumers, voluntary groups, commercial interests and others?

Commerce will push out the boundaries to make money. It is up to the state to legislate control

5. What principles should underpin a national alcohol harm reduction strategy?

The cultural and behavioural issues around alcohol use and misuse

Alcohol misuse and its impacts play out against a wider canvas of behaviour and attitudes related to alcohol: we need to understand this wider picture in order to understand how to influence and reduce harmful effects.

Questions

6. How do you define alcohol misuse? What factors do you take into account?

When it detrimentally effects your health, your work, your family.

7. What drinking patterns should an alcohol harm reduction strategy seek to affect? How susceptible are such patterns to change? Where should Government concentrate its efforts in prevention?

Target the young and begin to stigmatise the act of getting very drunk. The culture that

accepted drinking and driving was changed so we should be able to change attitudes towards drunkenness.

8. Is there a relationship between trends in drinking and wider social changes – e.g. the spread of higher education, changes in workplace culture, later marriage and/or family formation? Where does this suggest we need to focus attention in influencing behaviour?

9. One group we need to focus on specifically is young people, where the evidence suggests a rise in consumption, particularly by young women. Are there other groups we should be focusing on? For example are there specific issues around minority ethnic attitudes to, and use of alcohol which we should bring into our analysis?

10. It is easy to focus on the negative aspects of alcohol use and misuse. But what are the positive cultural and behavioural (as opposed to economic) aspects? What parts of our culture would change for the worse if we did not have alcohol?

11. Is there such a thing as a recognisably English drinking culture and if so what does it look like? What are the factors which influence it – for example are there sharp regional differences? Does it look different for different ages groups?

12. What factors influence behaviour – fashion and marketing, family background, education and information, financial, legal and regulatory, scientific, environmental? Which are the most influential in your view? How easy is it to exert influence through those factors?

Marketing alcohol to make it appear fun, sophisticated and cool. Emphasis on drinking for youngsters med holidays etc. Very damaging and unrealistic. Ban advertising on TV as with nicotine or counteract by public information films redressing the balance.

13. How do attitudes to risk affect use of alcohol?

Health: prevention, treatment and the impact on the NHS

The effects of alcohol misuse cost the NHS money. There are direct costs both to the NHS and in social care in treating those with alcohol dependence. And there are a host of indirect costs through alcohol-related illnesses and accidents; through violence fuelled by alcohol; and through mental illness and depression associated with alcohol misuse; and through the mixing of alcohol with illicit drugs. But there is also some evidence that moderate alcohol use for some groups can be beneficial to health.

Questions

14. How do you define harmful drinking? What factors do you take into account in deciding whether heavy drinking has become problematic drinking

15. How clear is the evidence both for the health costs and the health benefits of alcohol? Are there key pieces of research of which we should be aware? Where are the gaps in the evidence?

16. What are the costs for the NHS both directly and indirectly due to alcohol? We will be examining evidence on this but would welcome your views and any evidence you think we should be aware of.

17. What, in your experience, are the most appropriate means of prevention of alcohol dependence and serious alcohol misuse? What forms of training are most appropriate for professionals in health and social care, as well as other fields, who play a role in prevention.

18. "Brief interventions" can be offered to patients who have been identified as at risk from alcohol misuse. They may consist of a short session with a doctor or nurse to discuss a patient's drinking and to offer help and support to cut down on alcohol intake, if the patient wishes to do this. How effectively do you think those at risk are identified? How well have you found brief interventions to work and how might they work better?

19. Do current treatments for alcohol dependence and hazardous drinking work? Are they sufficiently tailored to meet differing individual needs? Are there other forms of treatment we should be aware of? Is there a need for guidance for the commissioners of local treatment services? How should individuals best access treatment services?

20. What can we learn from drugs prevention and treatment?

21. How, in your experience, can we minimise and prevent the injuries that are presented to A&E departments as a result of alcohol related assaults (often with glasses and bottles) or home and workplace alcohol-related accidents?

22. What are the links between alcohol misuse and mental health problems, including depression and suicide? How are services – both those aimed at prevention and treatment – best co-ordinated?

Crime, disorder and anti-social behaviour: the effects on our surroundings and community

The most visible effect many of us see from alcohol misuse is in our town and city centres: pavements littered with broken bottles and streets too intimidating to pass through. Links between alcohol and disorder are as much a matter for concern as are links between alcohol and crime.

Questions

23. What evidence is there about the links between alcohol and crime and the links between alcohol and anti-social behaviour? Are there key studies or pieces of evidence you think we should be aware of? Where are there gaps in the evidence?

The vast majority of public order offenders appear to have consumed alcohol. Likewise violence offences at night. Summer nights in parks and recreational areas are plagued by youngsters drinking and upsetting the locals. I am not aware of any objective evidence to support this other than what we see locally.

24. In your experience, is alcohol a factor in habitual re-offending? Does it lead to particular types of crime? How far does it lead to one-off offences?

Many types of violence including domestic violence is known to be fueled by alcohol. Otherwise decent individuals find themselves getting involved out of character when drunk.

25. To what extent can alcohol convincingly be demonstrated to be a factor in criminal and disorderly behaviour? How much is perception and how much is reality? What fuels the perceptions and are they accurate?

From my 25 years experience of policing I am convinced that alcohol is a significant contributor to violence, nuisance and public disorder. Drunks do commit many other crimes whilst under the influence although I am less certain that the alcohol fuels the crime of merely provides Dutch courage to the burglar etc.

26. Alcohol is far from being the only factor in crime and disorder. Other factors are involved – for example town centre disorder can be influenced by lack of availability of transport or design of environment. What other factors might be involved? How easy are these factors to influence? Who is responsible for them?

Locally we have a joint agency approach to the night time economy and its safety. A lot of violence occurs around the taxi ranks and food outlets. Staggered closing times for clubs, with entry prevented to all after a certain time as a stay put measure would reduce the numbers queuing for cabs and food etc. It is difficult to influence closing times now. Why not let them stay open as long as they liked. They would be then more amenable to staggered closing.

27. How does the impact of alcohol on urban environments differ from its impact on rural environments? What are the differences between urban and rural drinking patterns and how do they affect those communities and surroundings?

28. To what extent can impacts on the environment (including crime, disorder, noise and waste) be designed out, for example by use of plastic drinking glasses? Are there examples of good practice it would be helpful for us to be aware of?

locations of taxi ranks, CCTV, queuing railings inside food takeaways, security staff

29. There are some examples of good practice where a range of organisations responsible for dealing with different aspects of alcohol have successfully 'combined efforts' and shared information to tackle alcohol-related crime and disorder together. Should this approach be encouraged more widely? What inhibits organisations or communities from taking such an approach?

30. Is it right that anti-crime and anti-social behaviour initiatives need to be targeted on young people?

Yes. Although not exclusive to the young they are by far the vast majority involved.

31. Should we be encouraging different drinking patterns – in terms of time spent drinking, location of drinking etc – in order to tackle alcohol-related crime and disorder?

Yes. De-restrict the hours completely. Let market forces apply.

32. How can the law on, and policing approaches to public drunkenness and street drinking help to tackle these problems? Are existing controls and powers (such as those for local authorities to introduce no drinking zones) effective? Are they sufficient?

A glass of wine in a park or drunk and boisterous at 0100am on cans of lager in a park. The law and the policing must address the real problem. No drinking zones should be easier to designate and on the spot fines applicable.

33. One person's good evening out can be another person's sleepless night. Are there principles to guide the balance of individual rights and responsibilities?

34. Drink-drive policies are generally acknowledged to have been successful. What can we learn from them?

Change the culture. Attack the drinks industry portrayal of alcohol. Demonise the violent drunk.

35. Domestic violence is often associated with alcohol misuse – either by the perpetrator, or, on occasion, by the victim. What in your experience, is the nature of this link and what would you see as good practice in tackling the interrelationship between domestic violence and alcohol misuse?

The implications for vulnerable groups

Some people may be more vulnerable to the harmful consequences of using alcohol.

Certain groups of young people in particular are at higher risk of developing a range of difficulties that include alcohol-related problems (for example children in social care, those excluded from school and youth offenders). Families and carers can play an important role in protecting young people from problems but it is important to recognise that living with a parent or carer with an alcohol problem can itself become a source of vulnerability.

Questions

36. Which children and young people do you see as being most vulnerable to the consequences of alcohol misuse?

37. What other groups would you identify as particularly at risk and vulnerable to the harmful effects of alcohol?

38. Those who are vulnerable to the consequences of alcohol misuse often have complex problems (for example they may be homeless and may have additional mental health or drugs problems) and such factors may be inter-related. What key factors need to be understood in addition to alcohol use that contribute to maintaining the problems facing such groups? Which of these factors should interventions be aimed at?

39. How can the services provided by the state and others to vulnerable groups with complex problems be joined-up most effectively? Are there examples of joined-up delivery it would be helpful for us to be aware of? What gets in the way of joining-up services?

40. How realistically can these vulnerable groups be dealt with by mainstream services and how far do they need services which are tailored to individual groups and indeed to individuals on a case-by-case basis? What is your experience?

Education and communication

All of us receive messages about alcohol to some extent. We see advertising for alcohol and respond in various ways depending on our preferences. Information on sensible levels of drinking is also available. And messages on the consequences of getting it wrong can be clear – most obviously for drinkdriving. These are powerful tools for giving information and shaping perception. Do they alter behaviour?

Questions

41. What should be the objectives in this area? Is the aim to raise levels of awareness? Is it to inform more specifically? Is it to change behaviour? Are there any particularly successful or unsuccessful examples we should be aware

of?

42. Given clear objectives, what is the evidence on the effectiveness of these approaches? What do they actually achieve? How can their effectiveness be measured?

43. How well is the sensible drinking message reaching its audience? Is it sufficiently clear? What is the evidence on its penetration and its effect on behaviour?

44. How well is scientific research feeding into alcohol education? Is the message based on sound, unbiased and uncontroversial research and are new findings effectively incorporated?

45. Should particular groups be targeted for information and communication? Is there a need to provide more intensive alcohol education to groups other than young people (e.g. elderly drinkers)?

46. What is the role of schools, colleges, universities and other educational institutions in providing alcohol education as well as support for alcohol-related problems? How can we best establish and preserve a healthy learning environment?

47. What role is there for families/parents as role models or in educating their children on sensible levels of alcohol drinking and the risks of alcohol misuse? How can they best be informed and engaged in this effort?

48. What does experience show on the most effective means of getting messages across? Are there circumstances in which the Government is particularly well placed to do so, or conversely might be particularly unsuccessful?

49. What can we learn from educational initiatives in the field of illegal drugs?

50. Do you have views on the existing regulation of advertising on alcohol?
Yes. Ban it on TV.

The shape of the market and market-based solutions

The drinks industry is a major part of the national economy. It provides large numbers of jobs both in supply and distribution; it influences trends and fashion through its

advertising; and it provides a substantial portion of tax revenues. Understanding how that market works, what drives it and how it responds to demand is essential to producing an effective strategy.

Questions

51. Do you have any thoughts on the likely evolution of the alcohol industry over the next decade?

52. What is the relationship between the creation of trends and fashions in alcohol consumption by the market and consumers responding to trends and fashions? Are there discernible patterns which the Government might use in responding to the effects of alcohol misuse? Is there useful evidence we might draw on?

53. How far do you foresee research and development creating innovative market-led solutions to the problems of alcohol misuse?

54. How best can Government work with the alcohol industry to reach consumers? What approaches have been shown to be effective in England, the devolved administrations and further afield?

55. Are there other commercial interests which can influence drinking behaviour?

The economic costs and benefits of alcohol

Alcohol has significant costs for the economy. It costs the NHS and the police. It costs business money because of lost productivity and in some cases the need to repair alcohol-related damage. And it can be expensive for individuals who drink heavily and may find themselves unable to hold down a job. But it also has benefits. It brings in tax revenue and contributes to GDP. And it contributes to personal and social wellbeing for many. Part of the work on the project will be to form a clear picture of these costs and benefits.

Questions

56. How clear is the evidence both for the wider economic costs and benefits of alcohol? Are there key pieces of research of which we should be aware?

57. Where are the gaps in the available data on the economic costs and benefits of alcohol? Are there any obvious limitations we should be aware of? Are there any particularly helpful methods for assessing costs and benefits we should be aware of?

[]

58. What principles could guide us in deciding who is responsible for costs? How far should they fall to individuals, how far to business and how far to Government?

[]

59. What are the economic benefits of having an alcohol industry? Can we easily quantify them?

[]

60. Alcohol misuse can increase absenteeism and decrease productivity, whilst moderate consumption of alcohol may be beneficial in terms of reducing stress and tension and facilitating networking in the workplace. What in your view are the links between alcohol use and educational and occupational attainment?

[]

61. Are there particularly effective workplace-based initiatives designed to tackle alcohol misuse that we should be aware of?

[]
