

I was impressed with the wide range of opinions and speakers at yesterdays event. I would like to add the following comments and suggestions, in particular to the "evidence base" discussion (which was limited by the acoustics!)

1. It would be really useful to centralise a register of ALL current research work in the alcohol field. At yesterdays meeting I was struck by the lack of awareness of what was currently happening - there was a lot if talk about developing lists of gaps in the knowledge base, but to facilitate this we need a comprehensive picture of what is going on.
