

As an LLU Operator specialising in unbundling rural locations, we welcome the interim report and look forward to working with Digital Britain to help achieve the broadband targets outlined. We are unbundling all exchanges in Rutland, a rural county suffering from poor broadband speeds. We are also delivering faster speeds to businesses and home users in remote villages using FTTC with sub-loop unbundling. Any gaps are plugged using our long-range wireless service. By such a combination of approaches, we believe we will comfortably exceed the 2Mbps target for every property in our county before 2012.
