Eastern Seedlings and Environmental Association (ESEA) is an N.G.O registered with the government of Uganda to operate in Mbale district to promote forestry and modern farming to avoid deteriorating environment due to poor policies towards protecting the environment. Climatic change being a global problem mentioned in earlier reports of scientists and environmentalists. We are happy to receive a new friend “Stern Review Team” to tackle this problem of climatic change collectively.

To protect the Ozone layer by green house gas emission, the task is being carried out with our fellow friends in the struggle globally through information exchange and financial assistance. Eg Mr. Mike Thomas President – Plant a Tree in Africa (PATIA) and FIOH coordinator UK. These information materials on global warming has helped our organization to sensitize the masses of the dangers of global warming eg the decrease in volume of rivers Nile has caused Uganda to loose millions of revenue from Owen falls dam in Jinja from electricity generation and supply.

We shall be always with you “Stern Review Team” in advocating for environmental friendly policies to avoid future regrets.

Attached are: Answers / Suggestions to Stern Review Team and some World Scientists predictions on whether conditions.

We are happy to joining you.

Yours faithfully

Wandera Zubairi
SEC- (ESEA)
