

## **CHANGES TO CBML BASELINE AWAITING IMPLEMENTATION**

The following changes will be incorporated into the next issue of the CBML Baseline:

### **RE: CBML Baseline v4..1 Sections 4, 6 and 7**

1. Replace the element: “category”;  
with two elements: “categorising category” and “dividing category”.

The reason for the change is: To distinguish between those categories that have inheritance and those that do not.

### **RE: CBML Baseline v4..1 Sections 9, 11 and 12**

2. A CRQ defines a number of QTY characteristics that share a common “of what”.

These are characteristics not fragments and consequently may have plurality attached

The reason for the change is: Inconsistency

Example: A CRQ may have for the same type of object, “re-order quantity”, “maximum quantity” and “actual quantity”. “actual quantity” may have *time plurality* but “maximum quantity” and “actual quantity” do not.
