Contract Terms and Conditions

1 Contract documents

1.1 This Contract sets out the specific requirements for voluntary compliance with Regulation (EC) 1492/2004 under the National Scrapie Plan where the whole flock/herd cull option is to be applied. The complete Contract comprises:

- this Contract Booklet (NSP 76)
- your Contract Agreement (NSP 77)
- your Contract Schedule (NSP 78)¹

¹The initial collection and disposal visit. If you restock within the three year restriction period, further annual visits will be scheduled to genotype progeny and carry out spot checks.

2 Definitions

2.1 In this Contract:

The owner of the flock or their appointed or authorised agent will be referred to as ‘You’ or ‘Your’.

The National Scrapie Plan Administration Centre (NSPAC) acting on behalf of the Secretary of State for Environment, Food and Rural Affairs, the Minister for Environment and Rural Development in Scotland and the Minister for Environment Planning and Countryside of the National Assembly for Wales will be referred to as ‘We’, ‘Us’ or ‘Our’.

A further Glossary and definitions list can be found at Annex A.

2.2 You may receive forms which refer to the Compulsory Scrapie Flocks Scheme (CSFS). These should be read/understood as a reference to voluntary compliance with Regulation (EC) 1492/2004, the terms of which are set out in this Contract Booklet.

3 Applications to comply voluntarily with Regulation (EC) 1492/2004

3.1 On confirmation of scrapie on your holding, a report is sent to the National Scrapie Plan Administration Centre (NSPAC) and your details will be registered by NSPAC.

3.2 Owners of flocks that have had a case of scrapie reported between 1 October 2003, the date from which Annex VII of Commission Regulation 999/2001 as amended takes effect and 20 July 2004 in England and Scotland, (1st November 2004 in Wales) the date domestic enforcement legislation comes into force may apply to NSPAC for voluntary action to be taken to comply with Annex VII of Commission Regulation 999/2001 as last amended by Regulation (EC) 1492/2004.

3.3 Annex VII of Commission Regulation 999/2001 as last amended by Regulation (EC) 1492/2004 allows two options to be taken where scrapie is confirmed in a sheep flock:

- the whole flock/herd cull option or
- the genotyping and selective culling option, ie culling sheep not of the required resistant genotype and culling of any goat herd epidemiologically linked to the affected flock.
3.4 Where the whole flock cull is carried out under Regulation (EC) 1492/2004 the owner can leave the holding free from sheep for a three year period from the date of cull. Or, the owner can restock with sheep of the required resistant genotype within that three year period. If you restock with rams of ARR/ARR genotype and ewes with at least one ARR allele and no VRQ allele then the flock will be subject to TSE testing of a sample of culled and all fallen stock for three years from the date of restocking. If you restock with sheep solely of the ARR/ARR genotype and do not introduce sheep of any other permitted genotype for three years from the date of restocking then no TSE testing is required.

3.5 Goats can be re-introduced immediately provided all sheep and goat housing on the affected holding has been cleaned and disinfected and also provided any sheep on the holding are ARR/ARR rams and ewes with at least one ARR allele and no VRQ allele. The holding will be subject to intensified TSE monitoring of all culled and fallen stock over 18 months old for three years from the date goats were re-introduced.

4 Veterinary assessment

4.1 NSPAC will contact your local Animal Health Divisional Office (AHDO) to arrange for a Veterinary Officer to visit you to complete a Veterinary Report Form. This form records details of the sheep and goats on the holding, the circumstances of the sheep flocks and goat herds and any other relevant information. It also records if there are any other sheep or goat products, such as semen, ova or embryos in store.

4.2 Where the owner wishes to comply with Regulation (EC) 1492/2004 on a voluntary basis the VO will inform NSPAC. The NSPAC Veterinary Advisor in consultation with the owner will decide the appropriate action: either whole flock/herd cull or genotyping and selective culling all susceptible sheep and all goats present.

4.3 This Contract covers the whole flock/herd cull action. The NSPAC VA after consultation and agreement with the owner, has decided the most appropriate option to be applied to the affected holding is whole flock/herd culling. This involves the killing and complete destruction of all the sheep and goats on the holding, together with any sheep and goat embryos and ova from the holding.

4.4 For the purposes of this Contract, whole flock cull is defined as the cull of animals on a scrapie affected holding, identified by the veterinary inquiry/assessment. This is except for any existing NSP genotyped Type 1 sheep and Type 2 ewes with a functioning NSP Electronic Identification (EID) device in the form of a ruminal bolus. NSP Type 1 sheep may be retained or sold without restriction. NSP Type 2 ewes may be retained or sold only to holdings of similar status under the EC regulation.

4.5 If you are currently a member of any other NSP scheme or schemes, this Contract will supersede all the other NSP Contracts and they will be cancelled. You will be notified of these cancellations in writing. Also, all the sheep in your flock that have previously been NSP tested will have Regulation (EC) 1492/2004 restrictions applied to them immediately. You must abide by the sale, breeding, cull or slaughter restrictions for these sheep. Slaughter Forms will be issued if appropriate.

5 Disposal

5.1 NSPAC will issue a Sheep Collection Notice that will list all the sheep and goats and any of their embryos and ova in store that have to be collected and destroyed. If the sheep to be collected do not have an NSP EID, your local AHDO will compile a list of the ear tag numbers prior to the collection date and arrange a specific date and time for this as well as
the specific time and collection date in consultation with you. You must arrange for the animals to be gathered prior to collection. All animals must be identified by an ear tag with a unique number.

5.2 You must inform us of any sheep and/or goats that will need to be euthanased on farm for welfare or other reasons on the day of collection. Any sheep and/or goats that cannot be transported for welfare reasons outside the farmer’s control will be euthanased on farm, removed for disposal and compensation paid. You will not be compensated for animals that die before they are collected for disposal.

5.3 You must present the sheep and/or goats in good health, at least equal to that required when presenting sheep or goats to an abattoir. Failure to do so may constitute a breach of your contract and lead to penalties described in sections 20 and 21.

5.4 You must sign the Sheep Collection Notice once the sheep and/or goats have been loaded onto the haulier’s vehicle to confirm that all the listed animals have been collected or put down on farm for welfare or other reasons outside your control. The Sheep Collection Notice will be used to calculate your compensation payment. The Sheep Collection Notice will then be signed by the haulier and Animal Health Officer present at the time of collection.

6 Compensation payments

6.1 On receipt of the Collection Notice at NSPAC, your compensation payment will be processed. If you have completed and returned the Bank Automated Clearing System (BACS) Form enclosed with this Contract, your payment will be made direct into your bank account. Alternatively we will send you a payable order (cheque). We will advise you in writing when your claim has been passed for payment; you should expect to receive it within 28 days of that notification.

6.2 Compensation will be paid at the following rates:

- Adult sheep or goats: £90 each
- Lambs or kids up to 1 yr old: £50 each
- Cull ewes: £30 each
- Embryos: £150 each
- Ova: £5 each

²£25 per lamb for any subsequent lamb crop where a derogation to use NSP Type 2 rams for breeding has been granted.

³A cull ewe is an NSP Type 3 ewe that has been used under derogation and not culled as part of the initial cull.

6.3 No farm visit will be made to premises on which restrictions (such as movement) have been placed for the purposes of other disease control such as Foot and Mouth Disease. Similarly, a collection visit cannot take place if, to reach a farm, contractors are obliged to travel through an infected area or controlled zone which has been imposed for other disease control reasons. Where a farm visit has to be abandoned for such reasons, we shall re-organise collection after restrictions have been removed.
6.4 If you restock within the three year restriction period outlined at paragraph 3.4 you will be sent a new Contract Schedule detailing the visit dates and our proposed actions for any further blood sampling visits deemed necessary.

7  **Assistance payments to replace culled/slaughtered rams with NSP Type 1 rams**

7.1 Where you are restocking and replace a culled or slaughtered breeding ram with an NSP Type 1 ram we will make an assistance payment in line with the rates set out below on receipt of a completed Assistance Payment Claim Form (NSP 44 (VC)) and the required documentary evidence.

7.2 These payments are only available for breeding rams that are purchased before the next breeding season once the original ram has been culled or slaughtered. You will need to present acceptable proof of purchase for rams bought at auction or by private sale in the form of:

- An itemised bill of sale, signed and with individual sheep EID and farmer ID listed and priced (whereas collective totals e.g. 5x rams @ total price of £500 are not acceptable)
- And an NSP Genotype Certificate (NSP 4).

7.3 You may also be asked to supply further evidence in the form of a valuer’s or insurance certificate.

7.4 To claim assistance payments, you will need to complete the Assistance Payment Claim Form and send this along with your proof of purchase and Genotype Certificate to NSPAC.

7.5 Assistance payments will be paid when replacing the following categories of rams with Type 1 rams:

- for slaughtered rams (Types 2 and 4): up to max. £ 500
- for culled rams (Types 3 and 5): up to max. £ 410

7.6 You can continue to make assistance payment claims until you have used up your allocation, i.e. the number of breeding rams that you are replacing. NSPAC will have a record of the type of any NSP rams that are to be replaced and will pay assistance payments against any slaughtered rams first (provided an appropriate Slaughter Form has been received) and then against any culled rams.

7.7 Where the genotype of the stock rams in the flock to be whole flock culled is not known, they are culled and compensation paid. Therefore, the maximum assistance payment per stock ram will be £410 in these circumstances.

7.8 Where you present a proof of purchase showing a value less than the appropriate maximum amount above, you will receive an assistance payment equal to the proof of purchase value.

7.9 Assistance payments will be processed at NSPAC and either paid directly into your bank account if you have completed and returned a BACS form. Or, a payable order will be posted to you.

7.10 Payments will only be made to the name and address that appears on this Contract.

7.11 We will advise you in writing when your claim has been passed for payment. You should expect to receive your assistance payment within 28 days of that notification.
8 Free genotyping of prospective replacement sheep

8.1 If you propose to restock, we will carry out up to two free genotype tests of prospective replacement sheep for every breeding sheep culled under voluntary compliance with Regulation (EC) 1492/2004. The number of tests you are eligible for will be printed on your Source Flock Nomination Form (NSP 43 (VC)) that you will receive following the disposal of your sheep. Following the VA’s assessment, you may be permitted more genotype tests.

8.2 To take advantage of this free genotyping you must discuss the potential purchase process with the owner of the ‘source’ flock and agree prices before completing and returning the Source Flock Nomination Form to NSPAC.

8.3 Once the source flock genotypes are known, you must purchase the required number of sheep that are of suitable genotypes.

8.4 We will issue unrestricted and restricted NSP Genotype Certificates to the owner of the source flock for sheep of NSP Types 1 and 2 respectively.

9 Restrictions imposed by Regulation (EC) 1492/2004 following whole flock/herd cull action

9.1 Your holding will be under Compulsory Scrapie Flocks Scheme (CSFS) restrictions for a period of three years. This three-year period begins from the date when:

- culling action is completed and no sheep or goats are kept subsequently on the holding, or
- all sheep on the holding are NSP Type 1; or
- all rams are NSP Type 1 and ewes are NSP Types 1 or 2, providing TSE testing is carried out on all fallen stock and a sample of culled animals over 18 months of age for the restriction period; or
- restocking of goats occurs after cleansing and disinfecting of all sheep and goat housing, providing TSE testing is carried out on all culled and fallen stock over 18 months of age for the restriction period.

9.2 If you wish to restock the following restrictions apply for the three year period:

- Only NSP Type 1 rams may be kept and brought on to the holding
- Only NSP Type 1 or 2 ewes may be kept or brought on to the holding
- Only NSP Type 1 sheep may be sold to other flocks for breeding (Type 2 ewes may be sold to other CSFS flocks)
- You must inform your local AHDO if any sheep or goats over 18 months die on farm so that the carcass can be tested for TSE disease*
- You must inform your local AHDO if any goats over 18 months die on farm so that the carcass can be tested for TSE disease
- You must inform your local AHDO if you intend to cull any goats over 18 months of age so that TSE testing can be arranged*

* If the sheep flock comprises only NSP Type 1 rams and ewes then this restriction does not apply.
10 Derogations

10.1 Derogations are available where the frequency of the ARR allele within the breed or holding is low or to prevent inbreeding.

10.2 You can apply for derogation to bring on sheep to the holding that do not have the required genotypes provided they do not carry VRQ, for a maximum of five breeding years (see Annex B).

10.3 You may apply for a derogation to delay destruction of NSP Type 2 breeding rams and NSP Type 3 breeding ewes on your holding for up to five breeding years.

10.4 Where you have difficulty in finding replacement sheep, you may apply for a derogation to bring on non-pregnant ewes of an unknown genotype until January 2006. They must be held separately from any other sheep or goats on your holding until genotyped by NSPAC and any susceptible animals culled. You may only retain those of the required genotype, NSP Type 1 animals and NSP Type 2.

10.5 You should discuss this with the NSPAC VA when your flock is assessed to determine the most appropriate course of action under the regulation. The decision of the NSPAC VA is final. For requests that are accepted, the three year restriction period (see paragraph 9.1) will not start until the derogated sheep and their male progeny other than NSP Type 1 and female progeny other than NSP Types 1 and 2 are removed from the flock.

10.6 You will be subject to the restrictions (outlined in paragraph 9.2) as to what you can send from your holding if you are granted a restocking derogation. NSP Types 3 and 5 sheep will be culled and destroyed. NSP Types 1, 2 and 4 may be slaughtered for the food chain.

11 Ongoing genotype testing

11.1 If you choose to restock either solely with NSP Type 1 breeding rams and ewes or with NSP Type 1 breeding rams and NSP Types 1 and 2 breeding ewes rather than leave your holding free from sheep for the statutory three year period, we will conduct an annual genotyping visit, in each of the three years from the date of restocking with sheep of the required genotype, to test all lambs that you wish to retain for breeding (except where all sheep in the flock are NSP Type 1 only). This visit will be arranged to coincide with your breeding programme so that you may take decisions as to which sheep to retain in the flock.

11.2 If we have granted you a restocking derogation (outlined in paragraphs 10.2 and 10.3), we shall carry out visits to blood sample and genotype progeny of derogated animals and carry out spot checks of other animals.

12 TSE testing

12.1 TSE testing is conducted by collecting a brain sample from a dead animal. The test determines whether the animal is actually infected by a TSE disease such as scrapie.

12.2 Regulation (EC) 1492/2004 requires that a sample of culled and all fallen stock on scrapie affected holdings be tested for TSE during the three year period (outlined at paragraph 9.1 above) with negative results. You must inform your local AHDO if any sheep or goats over 18 months of age die on farm, or if any goats over 18 months of age are to be culled. Your AHDO will arrange for the carcass to be collected under the fallen stock arrangements and taken for TSE testing.
12.3 Any positive TSE test result during that three year period would result in the measures required under Regulation (EC) 1492/2004 being applied anew.

13 Costs

13.1 We shall meet the full costs associated with blood sampling, genotype testing; the supply and application of an EID device; and if needed, collection, cull and disposal of cull sheep; along with the certification of individual sheep where appropriate.

13.2 You will be responsible for any costs associated with the gathering and handling of sheep and the partitioning of sheep in readiness for collection by authorised hauliers for cull and disposal.

13.3 We reserve the right to charge for the re-issue of lost or damaged NSP Genotype Certificates.

14 Validation checks

14.1 We shall undertake random periodic checking and re-sampling of NSP certified sheep to audit and maintain the integrity of the NSP programme. We reserve the right to carry out such checks, with prior arrangement, on any NSP registered sheep.

15 Ram Register

15.1 In order to facilitate the provision of replacement animals and in the interests of openness, we undertake to make publicly available in the form of a Register, details of NSP Type 1 rams together with the name and telephone number of the owner (or agent).

15.2 We shall not publish details of animals with an unacceptable genotype nor any other information about the owner (or agent) that may have been disclosed. We further undertake to update the Register at least monthly to ensure information is as up-to-date as possible.

16 Research data

16.1 We intend to make available to bona fide researchers, details of the sheep that are entered into the NSP. This might involve the numbers of sheep tested under the NSP schemes; the breed; the type of EID device used; and the genotype by geographical location. Data will be used for the purposes of further scientific research to help us determine the future direction of the NSP programme. Some data may be published in aggregate form. We undertake not to permit publication of any data that would disclose individual NSP members or their flocks, other than as stated in section 15.

17 Written notices

17.1 Any notices that are to be given to you under this Contract will be sent to you in writing at the address on your Contract Agreement. Any notice you are required to give to us should be sent to:
   National Scrapie Plan Administration Centre (NSPAC)
   Defra
   Whittington Road
   Worcester
   WR5 2SU
18 Termination of this Contract

18.1 This Contract will be terminated once you have successfully completed the three-year restriction period (set out at paragraph 9.1). You will be notified in writing and if appropriate, offered membership of any NSP schemes for which you are eligible.

18.2 This Contract will be terminated if, after 20 July 2004 in England and Scotland (1st November 2004 in Wales, any positive result arises from TSE testing during the three year restriction period set out in paragraph 9.1. Your flock/holding will then be subject to the current EC Regulation for scrapie affected flocks and UK legislation.

18.3 You must inform NSPAC before you sell the affected flock or let/sell the affected holding and provide the name, address and contact details of the new owner or lettee. You must confirm that they have been informed by you of the restrictions on the flock/holding under this Contract. You must also inform NSPAC if you stop sheep or goat farming during the period you are under restrictions of Regulation (EC) 1492/2004.

19 False or misleading information

19.1 If you provide false or misleading information in relation to your Contract, or if you tamper with or re-use NSP Genotype Certificates or EID devices, you may be liable to repay any compensation paid and any costs incurred in blood sampling and genotyping under this Contract.

20 Breach of Terms or Conditions

20.1 If you breach any of the Terms or Conditions of this Contract, we will ask you to promptly remedy the breach within a specified time. If you do not do so, or if the breach is not capable of remedy, you will be liable to repay all reasonable costs relating to the disposal, blood sampling, electronic identification, genotyping and certification of your sheep. You undertake to repay any such costs upon demand within 28 days of being requested to do so by NSPAC.

21 Repayment and other consequences of termination

21.1 In the event of termination under sections 19 and 20, you will be liable to repay all reasonable costs relating to the blood sampling, electronic identification, genotyping and certification of your sheep. In addition, and where circumstances dictate, you may be required to pay back in full, or in part, your assistance payments with interest. You undertake to repay any such costs upon demand within 28 days of being requested to do so by NSPAC. You agree that if any sum of money is recoverable from or payable by you under this Contract we may deduct that sum from any sum due or payable to you by or on behalf of Defra, SEERAD or the Welsh Assembly Government.

21.2 Any person who fraudulently or dishonestly makes a false or misleading statement for the purposes of obtaining benefits or other advantage under this Scheme, or to assist any other person to do so, will also be liable to prosecution.

21.3 If you breach the conditions of this Contract and subsequently re-apply to join any other part of the NSP programme, we may reject your application on the grounds of your breach of contract.
22 Suspension or termination

22.1 We reserve the right to suspend or terminate the Contract at any time, e.g. in the event of a localised or national outbreak of disease or similar emergency, which may draw State Veterinary Service resources away from their normal work. In such circumstances, the Government will not be liable for any costs you may incur or have incurred under the Contract.

23 Limitation of liability

23.1 We do not accept liability for any loss or damage howsoever caused or arising out of the performance of our obligations under this Contract except where this results from our negligence or wilful default. In that event, we do not accept liability for any resulting loss of profit, business, goodwill, revenue or anticipated savings, or any indirect or consequential loss or damage.

24 Casualty compensation

24.1 If a sheep is injured or dies as a result of any part of the blood sampling or EID device application process that is required under this Contract, we will pay reasonable compensation if applicable to the owner for this loss. This is provided an impartial veterinary surgeon has provided satisfactory evidence to prove that the injury or death was the direct result of this procedure. Compensation will not exceed the independently assessed market value of the animal. The carcass must be provided for post mortem examination.

25 Variation

25.1 The Terms and Conditions can only be varied with our prior written agreement.

25.2 We reserve the right to amend the Scheme Rules or Terms and Conditions and will notify you in writing prior to implementing any such changes.

26 Joint liability

26.1 Where joint applications are made to comply with the Regulation (EC) 1492/2004 on a voluntary basis, each applicant shall be jointly and severally liable under the Contract.

27 Confidentiality

27.1 We reserve the right to publish information in accordance with sections 15 and 16 and in any other circumstances where we are required to do so by law, or are able to do so without breaching confidentiality.

27.2 We undertake to consult you in relation to any other request for disclosure of information made by a third party.

28 Governing law

28.1 English law will govern this Contract
### Annex A
