Outcome Indicators for Children Looked after

_Twelve months to 30 September 2008_  
_England_

**SUMMARY**

The main findings of the SFR are as follows:

1. At 30 September 2008 there were 43,700 children who had been looked after continuously for at least twelve months by English local authorities. This is a decrease of 1 per cent from 30 September 2007.

2. 33,000 of these children were of school age and of these 28 per cent had a statement of Special Educational Needs, 12 per cent missed at least 25 days of school, and 1 per cent received a permanent exclusion. The percentage of pupils with a Statement of Special Educational Needs is similar to 2007 and the percentage of looked after children with a permanent exclusion has decreased by 0.2 percentage points from 2007.

3. On average 56 per cent of those children looked after in the appropriate age group achieved level 2 at Key Stage 1, 50 per cent level 4 at Key Stage 2 and 31 per cent level 5 at Key Stage 3. The comparable percentages for all children were 85 per cent, 82 per cent and 74 per cent respectively.

4. 46 per cent of children looked after continuously for at least 12 months who were aged 11 in 2008 achieved at least level 4 at KS2 English. This is the same as in 2007 and an increase from 43 per cent in 2006. 44 per cent of children looked after continuously for at least 12 months who were aged 11 in 2008 achieved level 4 in maths at Key Stage 2. The corresponding percentage for 2007 was 43 per cent and in 2006 41 per cent.

5. In school year 11, 66 per cent of children looked after obtained at least one GCSE or GNVQ compared with 99 per cent of all school children who achieved any qualification. These figures are an improvement on 2006 when the corresponding figure for children looked after was 63 per cent. 31 per cent of children looked after did not sit an examination of this type in 2008 compared with 32 per cent in 2007 and 34 per cent in 2006.

6. 14 per cent obtained at least 5 GCSE's or GNVQs at grades A*-C compared with 65 per cent of all children who gained 5 or more A*-C at GCSE or equivalent. This compares to 13 per cent of looked after children and 62 per cent of all children in 2007.

7. At the end of school year 11, 69 per cent of children looked after for at least 12 months remained in full-time education and 16 per cent were unemployed the September after leaving school. In 2007, 66 per cent remained in full-time education and 17 per cent of children looked after were unemployed.
8. 9 per cent of children looked after aged 10 or over, were cautioned or convicted for an offence during the year, twice the rate for all children of this age. This rate has decreased since 2007.

9. 82 per cent of children looked after had immunisations that were up to date, 87 per cent had a dental check, and 87 per cent had an annual health assessment. In 2007 these figures were 80 per cent, 86 per cent and 84 per cent respectively.

10. 5 per cent of looked after children were identified as having a substance misuse problem during the year, of which 63 per cent received an intervention for their problem during the year.

COMMENTARY

Introduction

The OC2 statistical collection

11. In September 1999 the Government established 11 objectives for children’s social services in England. One of these is ‘to ensure that children looked after gain the maximum life chance benefits from educational opportunities, health care and social care’.

12. In order to collect the data needed to monitor progress towards this objective three new statistical collections were introduced. One of these (OC2) covers a range of outcome indicators for children looked after in England. This publication presents the results of this collection for the twelve months ending 30 September 2008. The figures presented include the National Indicator Set indicators 99 and 100.

Data Quality

13. This is the eighth time that social services departments have been asked to supply this information. Information about substance misuse of children looked after was collected for the first time for a twelve month period ending 30 September 2006.

14. In some authorities the number of children looked after in some of the categories on the OC2 return is relatively small; caution is required when considering these figures as they are more susceptible to chance variation than figures based on larger numbers of children.
Rounding and suppression of very small numbers to preserve confidentiality

15. We have again applied rounding and suppression conventions to all data in this publication, in order to conceal very small numbers. This is to prevent the possibility of individual children being identified in the statistical tables. The conventions used are now applied to all personal social services statistics publications, and closely follow the established guidelines to protect the identity of all children looked after.

16. A result of applying this procedure is that some columns of data at individual Local Authority level, which largely consist of very small numbers, contain many dashes (-) to replace actual numbers in the range 1-5. For further details about rounding and suppression see the Technical Notes at the end of this document.

Coverage of OC2

17. The OC2 collection covers all children and young people in England who had been looked after continuously for at least twelve months at 30 September. These figures exclude children looked after under an agreed series of short term placements (sometimes called ‘Family Link Placements’, ‘Short Breaks’ or ‘respite care’) during that period. These figures include asylum seeking children.

18. From the overall group of children who had been looked after for at least twelve months at 30 September, smaller subsets are defined by the scope of some of the data items. These subsets are listed in Table 1.1 in the Technical Notes section.

19. Where a child has ‘slipped’ a year or more (e.g. is taking key stage tests or GCSEs later than expected from their date of birth) their results are not included.

Duration in Care

20. The 2008 OC2 collection shows that 43,700 children had been continuously looked after for at least twelve months at 30 September 2008, a decrease of 1 per cent from 30 September 2007 when 44,200 children had been continuously looked after for at least twelve months. This represented approximately 73 per cent of all children who were looked after on 30 September 2008.

21. The figure of 43,700 from the OC2 returns closely approximates an estimate for children at 31 March 2008 who had been looked after for twelve months or more which can be derived from the SSDA 903 return.
Comparability of figures from OC2 with figures for all children

22. Several tables include comparative figures for all children in England alongside data collected from OC2. The figures for ‘all children’ are collected on various slightly different bases, which are explained below.

Comparability of educational results (Tables A, B, C, 1,2,3,4,5)

23. The figures for educational information including SEN and exclusions in Table A and educational attainment in Tables B, C, 1, 2, 3, 4, and 5 are collated according to the Local Authority (LA) to which each school belongs. Many children looked after in foster or residential placements are placed out-of-council and this is particularly the case in the Greater London area, where typically more than 60 per cent of all foster placements are placed out-of-council and may well attend a school belonging to a different LA to the council which is looking after them. Caution must therefore be used when comparing educational data collected on OC2, with that for all children.

24. Figures for children looked after at local authority level include maintained schools, including mainstream and maintained special schools, City Technology Colleges and Academies. Figures for “all children” at national level include all schools, including independent schools whereas local authority figures include maintained schools, including mainstream and special schools, CTCs and academies.

25. Comparability between educational attainment data for children looked after and all children at local level have to be viewed with these caveats in mind.

26. The national SEN figures are based on the January school census. All other figures are based on a school year running from 1 September to the following 31 August.

Comparability of education, employment and training status (Tables D and 6)

27. The comparative figures in Tables D and 6 were provided by the Connexions Service and are based on a survey of all year 11 pupils in maintained schools in England in the school year which ended in August 2008. They exclude data from a small number of independent schools.

Comparability of offending data (Table 7)

28. The figures for all children cited in Table 7 are for Police Force areas, which do not necessarily follow the same boundaries as individual authorities, and in many instances include the areas of a number of authorities. These figures must therefore be treated with caution. At present the ‘all children’ data collected on this basis are the only figures available to provide a comparison
with children looked after.

**Figure 2.2: Comparability between reference periods of OC2 data for 30 September 2008 and the data for all children obtained from other sources.**

Educational Information

Children who have statements of Special Educational Needs (SEN) (Tables A and 1)

29. Children have special educational needs if they have a learning difficulty which calls for special educational provision to be made for them. Further definitional and background information is provided in the *Special Educational Needs Code of Practice* which was published in November 2001.

30. 33,000 of the children looked after continuously for at least twelve months were of school age at 30 September 2008. It is estimated that of these, 9,200 (28 per cent) during the 2007/08 school year held statements of special educational needs.

31. Compared to national figures for all children in England, children looked after are almost 10 times more likely to hold a statement of special educational needs. Just under 3 per cent of all school children in England held a statement of SEN as at January 2008.

32. The comparator figures in Table A for all children in England represent the position at January 2006 to January 2008.

33. Figure 3.1 shows the variation between authorities in the percentage of their children looked after for twelve months who had statements of SEN on 30 September. As can be seen, in nearly two-thirds of authorities the incidence of children looked after with special educational needs lies between 21 per cent and 35 per cent inclusive.

*Figure 3.1: Councils ranked according to percentage of children looked after for at least twelve months at 30 September 2008 who held a statement of SEN*
Exclusions from school (Tables A and 1)

34. Children looked after also appear more likely to receive a permanent exclusion from school. Out of the 33,000 children looked after of school age, there were 170 permanent exclusions during the 2007-08 school year. Fixed-term exclusions are not included. Although this is a count of exclusions rather than children excluded, it is uncommon for the same child to receive more than one permanent exclusion during the school year.

35. The number of permanent exclusions expressed as a percentage of children who had been looked after for at least twelve months and who were eligible for schooling is 1 per cent. This percentage is very similar to last year.

36. This compares with 0.1 per cent of all children in England in the 2006/07 school year. The comparator figures of exclusions are for all children.

37. Small numbers have been suppressed in Table 1. For further details see the section on ‘Rounding and Suppression’ at the end of the Technical Notes.

Children who missed at least 25 days of school for any reason (Tables A and 1)

38. For the 2007/08 school year, 12 per cent of children looked after continuously throughout the year missed 25 days or more of school for any reason. This was formerly known as indicator C24 within Ofsted’s Performance Assessment Framework. There is no comparable data available for all children, although the Department collects information on absence from school this is only for pupils of age 5 to 15. Information is not available for pupils from all age groups.

Targets on attainment (Tables B, C and 3 and 5)

39. The current Public Service Agreement (PSA) Delivery Agreement 11 aims to narrow the gap in educational achievement between children from lower income and disadvantaged backgrounds and their peers. There are two indicators underpinning this target, Indicator 4 relates the proportion of children achieving level 4 at Key Stage 4.

- This aims to increase the proportion of children looked after at Key Stage 2 achieving level 4 in English to 60 per cent by 2011 and to increase the proportion of children looked after at Key Stage 2 achieving level 4 in mathematics to 55 per cent by 2011.

Indicator 5 relates to the proportion of children looked after achieving 5 A*-C GCSEs.

- This aims to increase the proportion of children looked after achieving 5 A*-C GCSEs or equivalent at Key Stage 4 to 20 per cent by 2011.
40. The target relates to children who were looked after on 30 September and had been continuously looked after for at least 12 months.

41. 46 per cent of children looked after continuously for at least 12 months aged 11 in 2008 achieved at least level 4 at KS2 English. This is the same as in 2007 but an increase from the 2006 figure of 43 per cent.

42. 44 per cent of children looked after continuously for at least 12 months who were aged 11 in 2008 achieved level 4 in mathematics at Key Stage 2. The corresponding percentage for 2007 was 43 per cent and in 2006 41 per cent.

43. 14 per cent of children continuously looked after for at least 12 months in year 11 attained 5 GCSE passes at grades A*-C (see paragraph 51). This figure compares to 13 per cent in 2007 and to 12 per cent in 2006.

44. In addition there are two National Indicators (NIs) derived from the OC2 data. NI 99 relates to the proportion of looked after children reaching level 4 in English at Key Stage 2, NI 100 relates to the proportion of looked after children reaching level 4 in mathematics at Key Stage 2.

**Key Stage and GCSE results (Tables B&C, and Tables 2, 3, 4 & 5)**

45. The performance of those children looked after continuously for a year at the end of the three Key Stages is shown in Table B. Overall on average, 56 per cent reached target level 2 at Key Stage 1, 50 per cent reached level 4 at Key Stage 2 and 31 per cent reached level 5 at Key Stage 3. (The comparable figures for school year ending August 2007 were 56 per cent, 49 per cent, and 30 per cent respectively.) It can be seen that the pattern of academic performance of children looked after mirrors that of the national school population. The equivalent national figures for key stages 1, 2 and 3 for the school year ending August 2008 being 85 per cent, 82 per cent and 74 per cent respectively. However the dip in performance at the higher Key Stages is steeper for children looked after.

46. Considering Maths and English only, on average, 46 per cent of children looked after for at least 12 months reached level 4 at Key Stage 2, the same as in 2007 and an increase from 43 per cent in August 2006. Figure 3.2 illustrates these figures more clearly and compares them against the equivalent figures for all children. Combining these figures in 2007/08 shows the proportion of children looked after continuously for at least 12 months aged 11 and achieving at least level 4 at KS2 English and Maths to be 57 per cent of the proportion for all children. This is the same as in 2006-07 and an increase from 54 per cent in 2005-06.
Figure 3.2: Percentage of children looked after for at least 12 months at 30 September 2008 reaching level 4 in both mathematics and English, compared with all children:

47. Figure 3.3 shows the percentage of children looked after attaining the target level at each Key Stage test, as a proportion of the percentage of all children attaining the target level for the 2007-08 school year.

48. The data show that the performance of children looked after achieving the target level for Key Stage 1 is between 62 per cent and 69 per cent of that of all children. For Key Stage 2, the performance of children looked after drops to between 57 per cent and 68 per cent that of all children, and at Key Stage 3, the attainment of children looked after is only around 42 per cent of that of the total school population at Key Stage 3.
Figure 3.3: The proportion of children looked after attaining the target level of each of the Key Stage tasks and tests, shown as a percentage of the proportion of all children attaining the target level. Twelve months to 30 September 2008

Year 11: GCSEs and GNVQs (Tables C and 5)

49. Of the children looked after continuously throughout Year 11 (Tables C and 5), 31 per cent did not sit a GSCE exam, compared with 32 per cent in 2007 and 34 per cent in 2006. 66 per cent obtained at least one GCSE at grade A*- G or a GNVQ. This compares to 64 per cent and 63 per cent for the school years ending 30 August 2007 and 2006. The equivalent figure for all children in England in year 11 who obtained at least one grade A* - G or a GNVQ during the school year ending August 2008 is 99 per cent.

50. 43 per cent of children looked after during the year achieved 5 or more passes at grades A*- G, compared to 92 per cent of all children.

51. Only 14 per cent of children looked after attained 5 GCSEs at grades A*-C, compared with 65 per cent of all children. This figure for children looked after shows a slight increase compared to previous years (13 per cent in 2007 and 12 per cent in 2006). The OC2 excludes the results of young people who left care after completing year 11 but before 30 September 2008.

52. Figure 3.4 compares GCSE attainments of children looked after in year 11 to the attainments of all children.
Education and employment at age 16 (Tables D and 6)

53. The OC2 return collects information on the position of those children looked after who finished compulsory schooling during the 2007-08 school year on completing year 11. It should be borne in mind that these data do not represent outcomes for care leavers, as all of these young people were still looked after on 30 September.

54. At 30 September 2008, 69 per cent of these young people were in or about to start full-time education. 7 per cent were in full-time training, 3 per cent in full-time employment and 5 per cent in part-time employment, education, or training. 16 per cent of these young people were unemployed at 30 September; for 1 per cent this was due to ill-health or disability. These percentages are similar to those which were reported for the position at 30 September 2007 (66 per cent were in full-time education, 7 per cent in full-time training, 4 per cent in full-time employment, 6 per cent in part-time employment, education or training and 17 per cent were unemployed).

55. Figure 3.5 and Tables D and 6 compare these outcomes with data for all children who completed year 11. The comparative information for all children is from the ‘Connexions/ Careers Service Annual Activity Survey 2008’. This survey was carried out in October 2008, covering all young people who were in year 11 during the 2007-08 school year.

56. The comparison shows that, at a national level, fewer children looked after remained in full-time education than in the comparator population, whereas more looked after children were unemployed, or in part-time education, employment or training.
Cautions and Convictions (Tables E and 7)

57. Children looked after of the age of criminal responsibility are twice as likely to be cautioned or convicted of an offence than others, 9 per cent of children looked after for a year or more who were aged 10 or over had been convicted or subject to a final warning or reprimand during the year.

58. This compares with a figure of 4 per cent for all children. The ratio of these two percentages was formerly known as indicator C18 within Ofsted’s Performance Assessment Framework. This figure (2 per cent) is lower than that for the twelve months ending 30 September 2007 (3 per cent).

59. Table 7 shows these figures at local council level. As explained above, the comparable figures for all children are for Police force areas, which do not necessarily follow the same boundaries as individual authorities and in many instances cover the areas of several authorities.

1. Data for all children are from the Home Office and are for calendar years 31 December 2004 to 2006, expressed as a percentage of all children aged 10-17.
2. For definitions of PAF C18, see table E and table 7.
Health Outcomes

Health Assessments (Table F and Tables 8 & 9)

60. Of the 43,700 children who had been looked after continuously for twelve months, 37,800 (87 per cent) had their annual health assessment and 38,200 (87 per cent) had their teeth checked by a dentist during that period.

61. It must be borne in mind when considering these figures that children have a right to refuse a health assessment or dental check. As the OC2 return is for children looked after for a year, all babies will have teeth and so they should be checked.

62. Around 35,900 (82 per cent) of children looked after continually throughout the year were up-to-date for their routine immunisations. This figure should also be interpreted with some caution. Children may enter care with their immunisations behind schedule, or unknown as in the case of unaccompanied asylum seekers, and it is not always possible for a local authority to ‘catch up’ with immunisations.

63. The combination of the percentages for dental checks and health assessments make up PAF C19. Immunisations used to be included in this calculation but have now been taken out. Previous years PAF C19 has been recalculated without immunisations for England only so a comparison can be made. The PAF C19 figure for the twelve months ending September 2008 is 87 per cent. This compares with a figure of 85 per cent last year.

64. In addition, 6,200 (88 per cent) of children under age 5 who had been looked after for at least a year had their development assessments up to date. This is the same as in 2007.

Substance Misuse (Table G and Table 10)

65. 5 per cent of children looked after were identified as having a substance misuse problem during the year, of which 63 per cent received an intervention for their problem during the year. This is similar to 2007.

TECHNICAL NOTES

Coverage of OC2

**Twelve month data period**

67. The data collected cover young people looked after at 30 September 2008 in England who had been looked after continuously for at least twelve months, defined as the period from 1 October to the following 30 September inclusive. This departs from the Department's other collections of children's personal social services data, which use a 'year' based on the period ending 31 March. The data period used for the OC2 was designed to accommodate the school year.
Boundaries of authorities

68. As explained in section 2 of this Commentary, some young people covered by the OC2 will have attended schools outside the boundaries of their home local authority social services department. Hence caution must be used when comparing educational data collected on OC2, with that for all children collected.

Rounding and Suppression of very small Numbers

69. To ensure that no individual can be identified from statistical Tables, similar conventions from last year have again been used in this publication for the rounding and suppression of very small numbers.

National Tables A - G

70. For this reason, all numbers which appear in the national summary Tables (Tables A to G) have been rounded to the nearest 100 if they exceed 1,000, and to the nearest 10 otherwise. Numbers from 1 to 5 inclusive have been suppressed, being replaced in the Table by a hyphen. Where any number is shown as zero (0) the original figure submitted was also zero.

71. All percentages at national level have been rounded to 1 decimal place. Wherever the numerator is 5 or less or the denominator is 10 or less of the underlying numbers from which a percentage has been calculated, the percentage has been suppressed and replaced by a hyphen. Where any percentage is shown as zero (0) either both the original figures from which it has been calculated were zero or the numerator was zero and the denominator is over 10.

Local Tables 1 - 10

72. At local authority level (Tables 1 - 10) the England total numbers at the head of each Table have been rounded either to the nearest 10 or 100, following the rule outlined above.

73. All other numbers at local authority level have been rounded to the nearest five, and numbers from 1 to 5 inclusive have been suppressed, being replaced in the published Tables by a hyphen. Where any number is shown as zero (0), the original figure submitted was also zero.

74. In local authority tables the England total percentages at the head of each Table have been rounded to 1 decimal place, following the rule outlined above.
75. Ratios and PAF indicators have been expressed to one decimal place. Where percentage figures from other sources have been quoted, they have been left in the form in which they were originally published.

76. In tables which include time series, this rounding convention has been applied to data for previous years for the sake of consistency.

**Suppression of other numbers**

77. It has also been necessary to suppress other figures whenever it would be possible to calculate the value of a suppressed number by means of simple arithmetic. The rule applied in these circumstances has been to suppress the next smallest data item.

**Symbols used**

78. The following symbols have been used in the Tables:

- 0 zero
- - Small number suppressed to preserve confidentiality. Normally this will be a number between 1 and 5 inclusive, or a percentage where either the numerator is between 1 and 5 or the denominator is between 1 and 10 inclusive.
