

# Consumer Price Inflation, January 2015

Coverage: UK

Date: 17 February 2015

Geographical Area: UK

Theme: **Economy**

## Key points

- The Consumer Prices Index (CPI) grew by 0.3% in the year to January 2015, down from 0.5% in December 2014.
- Falling prices for motor fuels and food were the main contributors to the slowdown in the rate of inflation.
- Smaller price falls than a year ago for clothing partially offset the slowdown.
- CPIH (not a National Statistic) grew by 0.4% in the year to January 2015, down from 0.6% in December 2014.

## A brief description of Consumer Price Inflation

Consumer price inflation is the speed at which the prices of goods and services bought by households rise or fall. Consumer price inflation is estimated by using price indices. One way to understand a price index is to think of a very large shopping basket containing all the goods and services bought by households. The price index estimates changes to the total cost of this basket. ONS consumer price indices are published monthly.

ONS has published a [video](#) and an [infographic](#) that explain how consumer price inflation is calculated.

A price index can be used to measure inflation in a number of ways. The most common is to look at how the index has changed over a year. This is calculated by comparing the price index for the latest month with the same month a year ago. This is known as the 12-month inflation rate. This bulletin measures inflation to January 2015, so the 12-month rate measures changes in prices between January 2014 and January 2015.

ONS publishes a range of measures of consumer price and other price inflation. [A tale of many price indices](#) summarises information on the different measures.

## Consumer Prices Index (CPI)

### What is the CPI?

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. First published in 1997 as the Harmonised Index of Consumer Prices (HICP), the CPI is the inflation measure used in the Government's target for inflation.

The CPI is also used for purposes such as uprating pensions, wages and benefits and can aid in the understanding of inflation on family budgets. For more information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

### Latest figure and long-term trend

The CPI 12-month rate (the amount prices change over a year) between January 2014 and January 2015 stood at 0.3%. This means that a basket of goods and services that cost £100.00 in January 2014 would have cost £100.30 in January 2015. This is the lowest 12-month rate on record. The previous lowest CPI 12-month rate was 0.5% in May 2000 and December 2014.

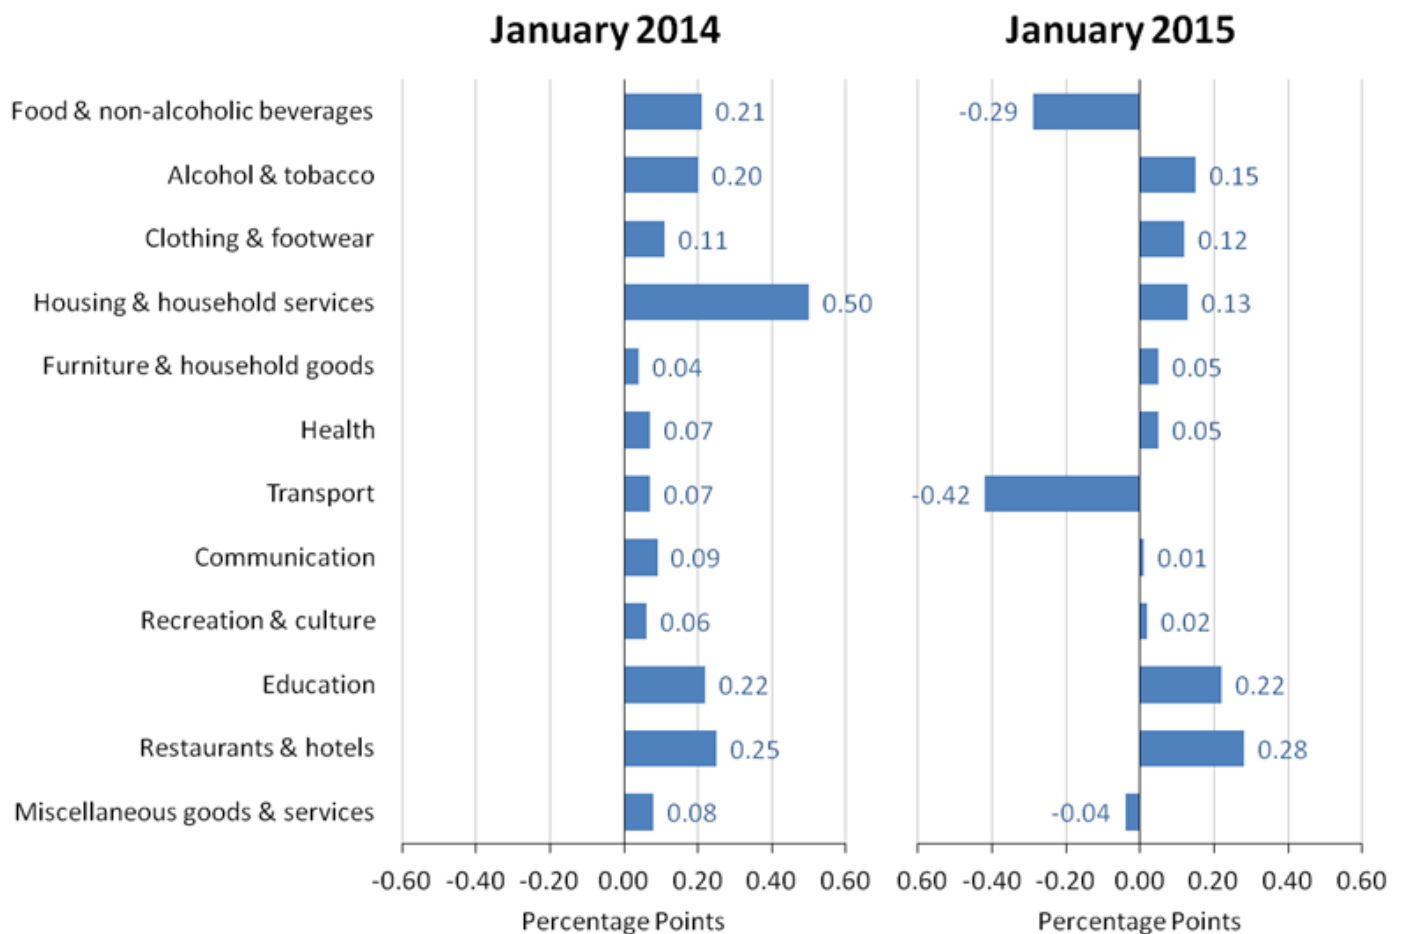

Over the last five years, the three main contributors to the 12-month inflation rate have been: housing, water, electricity, gas & other fuels; restaurants & hotels and transport (including motor fuels). Combined, these three sectors have, on average, accounted for just under half of the 12-month inflation rate each month.

In the year to January 2015, food prices fell by 2.8% and prices of motor fuels fell by 16.2%. This continues the downward trend in the price movements in these sectors, with prices falling or remaining unchanged on the year in these sectors for nine and 17 consecutive months respectively. The food and motor fuels product groups in total reduced the CPI 12-month rate by approximately 0.9 percentage points. An article published by ONS in November outlines some [possible factors that may be affecting prices](#).

Figure A shows the contributions to the CPI 12-month rate in January 2015 compared with the contributions to the 12-month rate a year earlier. A larger version of the chart can be viewed by clicking on it (HTML version only).

**Consumer Prices Index (CPI): What are the main movements?**

This section explains which goods and services had the biggest impact on the change to the 12-month rate between December 2014 and January 2015 and, where relevant, considers the longer-term inflationary trends for these goods and services.

The change in the CPI 12-month rate can be calculated by comparing the 12-month rates for two consecutive months. An alternative, and equally valid, approach is to calculate it by comparing the price change between the latest two months and the price change between the same two months a year ago. [Explaining the contribution to change in the 12-month rate \(37.1 Kb Pdf\)](#) is a diagram explaining the calculation.

The CPI fell by 0.9% between December 2014 and January 2015 – the largest monthly fall since January 2001. This compares with a smaller fall of 0.6% between the same two months a year earlier. The 1-month movement was therefore 0.3 percentage points lower this year compared with a year ago. This led to the CPI 12-month rate falling from 0.5% in December 2014 to 0.3% in January 2015. The 0.1 percentage point difference between the movements in the annual and monthly rates is due to rounding.

The largest downward contributions to the change in the CPI 12-month rate between December 2014 and January 2015 came from:

- **Transport:** prices, overall, fell by 2.0% between December 2014 and January 2015 compared with a smaller fall of 0.6% between the same two months a year earlier. Most of the downward contribution came from motor fuel prices falling at a quicker rate than a year ago. The average petrol price fell by 8.5p per litre between December 2014 and January 2015 to 108.3p. The average diesel price fell by 7.3p over the same period to 115.6p. Petrol is now at its lowest price since November 2009 and diesel since February 2010.
- **Food & non-alcoholic beverages:** prices, overall, fell by 0.7% between December 2014 and January 2015, compared with a rise of 0.2% between the same two months a year earlier. The downward contribution came from price movements for food – most notably for milk (where there were price falls at a number of major supermarket chains for 2 pint cartons) and a range of fruits.
- **Alcoholic beverages & tobacco:** prices, overall, increased by 1.4% between December 2014 and January 2015, compared with a larger rise of 3.1% between the same two months a year earlier. Most of the downward contribution came from price movements for alcohol – most notably beer, where prices usually rise in the new year but fell this year.
- **Recreation & culture:** prices, overall, fell by 0.9% between December 2014 and January 2015 compared with a smaller fall of 0.5% between the same two months a year earlier. The downward contribution was broad-based across the sector.

The largest upward contributions to the change in the CPI 12-month rate between December 2014 and January 2015 came from:

- **Clothing & footwear:** prices, overall, fell by 3.7% between December 2014 and January 2015, compared with a larger fall of 5.4% between the same two months a year ago. Prices for clothing always fall in December and January during the winter sales period. However, the fall this winter was smaller than in recent years with reports of better than expected sales.
- **Furniture, household equipment & routine maintenance:** prices, overall, fell by 2.5% between December 2014 and January 2015, compared with a larger fall of 3.1% between the same two months a year ago. The downward contribution came from a range of goods, most notably household cleaning products, where there were a number of price recoveries this January compared with sales a year ago.

Figure C shows the contributions from each part of the CPI basket of goods and services. A larger version of the chart can be viewed by clicking on it ([HTML version only](#)).

**Figure C: Contributions to the change in the CPI 12-month rate: January 2015**

United Kingdom

(20 Kb)

**CPIH**

The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index. [Full details](#) can be found on the UK Statistics Authority website and an [explanatory note \(313.9 Kb Pdf\)](#) on the ONS website.

CPIH is a measure of UK consumer price inflation that includes owner occupiers' housing costs (OOH). These are the costs of housing services associated with owning, maintaining and living in

one's own home. OOH does not include costs such as utility bills, minor repairs and maintenance, which are already included in the index. CPIH uses an approach called rental equivalence to measure OOH. Rental equivalence uses the rent paid for an equivalent house as a proxy for the costs faced by an owner occupier. In other words this answers the question "how much would I have to pay in rent to live in a home like mine?" for an owner occupier. OOH does not seek to capture increases in house prices. Although this may be inconsistent with some users' expectations of measures of OOH, the inclusion of an asset price and therefore capital gains would make the index less suitable for a measure of consumption. OOH currently accounts for almost 18% of the expenditure weight of CPIH. This has increased notably from a weight of 10% in 2005.

Currently, the method of calculation, the population coverage and the basket of goods and services are the same as the Consumer Prices Index (CPI), with the exception of OOH. The method of deriving the weights for CPIH and the data used for these are also the same as for CPI, with the exception of OOH. This can result in some differences from the CPI.

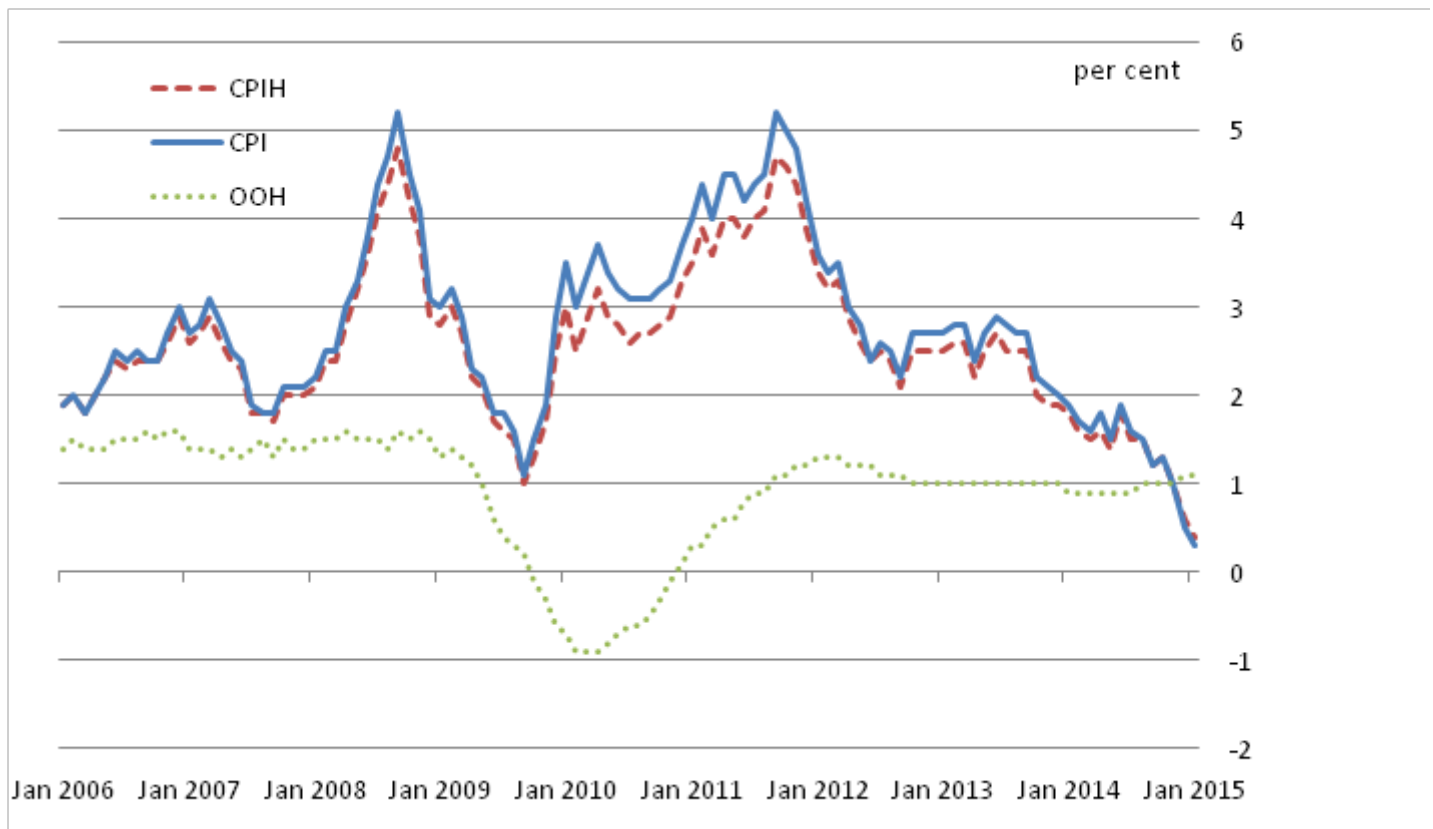

In January 2015, the 12-month rate (the rate at which prices increased between January 2014 and January 2015) for CPIH stood at 0.4%, down from 0.6% in December 2014. The change in the CPIH 12-month rate was therefore the same as the change in the CPI 12-month rate, despite a small upward contribution from rising owner occupiers' housing costs.

Figure D shows the CPIH and OOH component 12-month rates since January 2006 (the earliest date for which the CPIH 12-month rate can be calculated). The CPI 12-month rate has been included for comparative purposes. Table B shows the CPIH and OOH component 1-month and 12-month rates and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

**Figure D: CPIH, OOH component and CPI 12-month rates since January 2006**

United Kingdom

Source: Office for National Statistics

**Notes:**

1. The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index.
2. The time series for this chart will be gradually increased up to a time span of 10 years as more periods of data become available.

[XLS](#) [XLS format](#)

(30 Kb)

**Retail Prices Index (RPI) and RPIJ**

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

The RPI is a long-standing measure of UK inflation that has historically been used for a wide range of purposes such as the indexation of pensions, rents and index-linked gilts. For further information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

RPIJ is an improved variant of the Retail Prices Index, which is calculated using formulae that meet international standards. The rationale for creating RPIJ was to give users a better alternative to the RPI if their needs were for a measure of inflation based on the same population, classifications, weights etc as the RPI. Currently, RPIJ also acts as an analytical series in that it allows users to see the impact of using the Jevons (which meets international standards) in place of the Carli formula (which does not meet international standards) in the RPI. The use of the different formulae at the elementary aggregate level is currently the only difference between the two indices. ONS does not produce detailed goods and services indices for RPIJ.

In January 2015, the 12-month rate for RPIJ stood at 0.5%, down from 1.0% in the year to December 2014.

The RPI 12-month rate for January 2015 stood at 1.1%, meaning that it was 0.6 percentage points higher than it would have been had it used formulae that meet international standards.

Figure E shows the RPI and RPIJ 12-month rates for the last 10 years. Over this period the RPIJ 12-month rate has been, on average, 0.5 percentage points lower than the RPI but the difference has increased to an average of 0.6 percentage points over the last 3 years. Cumulatively, inflation as measured by the RPI is 35.2% over the 10-year period, compared with 28.4% as measured by the RPIJ. The use of the Carli formula has therefore added 6.8 percentage points to the change in prices over the last 10 years. A larger version of the chart can be viewed by clicking on it (HTML version only).

Table C shows the RPI and RPIJ 1-month and 12-month rates and index values for the last year.

**Background notes**

1. News

**Improvements to the measurement of CPIH**

On 30 January 2015, ONS published an article entitled [Improvements to the measurement of Owner Occupiers' Housing costs and Private Housing Rental Prices \(2.48 Mb Pdf\)](#). This article describes improvements to the rental equivalence measure of owner occupiers' housing costs (OOH) in CPIH. Consistent data sources and methods are also used in the construction of the

Index of Private Housing Rental Prices. The impact of these improvements on both series is presented within this article.

The revision to the OOH component in CPIH presents ONS with a one-time opportunity to revise the OOH weight in CPIH so that it is aligned with historical National Accounts estimates and it reflects planned changes to the methodology for measuring imputed rents that will be introduced in Blue Book 2016. The revised CPIH series, showing the impact of both revising the OOH series and updating the OOH weights historically (to reflect the Blue Book 2016 changes), will be made available in a separate article to be published on 17 March 2015. Once the March 2015 OOH weights revision has been implemented, the weights in CPIH will be left unchanged retrospectively, in accordance with the CPIH revisions policy.

## Consumer Price Inflation Weights

In line with usual practice, the January 2015 indices include the planned updates to the higher level CPI and CPIH weights. The 2015 CPIH weights include the improvements detailed above. The February 2015 indices will include the planned updates to the higher level RPIJ and RPI weights, and to the CPI, CPIH, RPIJ and RPI item weights. Details of the weights change will be published in an article on 17 March 2015.

## Update to the Consumer Price Inflation Basket of Goods and Services

The goods and services that are priced to construct the consumer price inflation indices (CPI, CPIH, RPIJ & RPI) are reviewed annually to ensure that the indices reflect the latest spending patterns by customers in the UK. Changes to the basket of goods and services this year, effective from the February indices, will be described in an article to be published by ONS on 17 March 2015.

## 2. Understanding and accessing the data

A full description of how consumer price indices are compiled is given in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). This is supplemented by video, infographics and textual information available from the [guidance and methodology section](#) of the ONS website.

A more detailed [quality report \(141.9 Kb Pdf\)](#) for this statistical bulletin is available. The report assesses consumer price inflation statistics against standard dimensions of quality such as relevance, accuracy and accessibility. The report was last updated in October 2013.

The [mini Triennial Review \(1.75 Mb Pdf\)](#) of the CPI and RPI Central Collection of Prices is available.

The most efficient way to access the latest consumer price inflation data and briefing on the ONS website is via the CPI key figure on the [homepage](#).

In response to user feedback, all consumer price inflation data are available in one location. The [Consumer Price Inflation Reference Tables \(2.15 Mb Excel sheet\)](#) are provided via an Excel file.

To help users further, very detailed CPI data are now available including the [individual price quotes and item indices](#) that underpin the CPI. Please note, the data that are published are at a level which means that no individual retailer or service provider will be able to be identified. The data published covers January 1996 to September 2014. These data are updated once a quarter with around a two-month lag with the latest CPI publication. For example, the data will next be updated when the February CPI is published on 24 March 2015, at which point the detailed data published will be extended to December 2014.

Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union according to rules specified in a series of European regulations developed by the European Commission (Eurostat) in conjunction with the EU Member States. Eurostat releases figures for the Harmonised Index of Consumer Prices (HICP) for the month of January 2015 for EU Member States, together with an EU average, on 24 February 2015. A summary of the latest European data is available from [Eurostat's database tables](#). Further information on HICP for the European Union, Euro area and other EU Member States is available from [Eurostat's HICP web page](#).

### 3. Methods - CPI and other measures of inflation

The CPI, CPIH, RPIJ and RPI are compiled using the same underlying price data, based on a large and representative selection of almost 700 individual goods and services for which price movements are measured in around 140 randomly selected areas throughout the UK. Around 180,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for one year at a time.

The selection of goods and services that are priced to compile these indices is reviewed annually. The contents of the 2014 basket are described in an article [Consumer Price Inflation: The 2014 Basket of Goods and Services \(138.6 Kb Pdf\)](#). The expenditure weights used to compile the indices are also updated each year. Additional details of the updated weights for 2014 are available from the ONS website in an article published on 25 April 2014 entitled [Consumer Price Inflation Statistics - Updating Weights for 2014 \(123.7 Kb Pdf\)](#).

Rates of change for the CPI and CPIH are calculated from unrounded index levels, rather than from the published indices, which are rounded to one decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels for the CPI and CPIH are available from tables 64 and 65 of the [Consumer Price Inflation Reference Tables \(2.15 Mb Excel sheet\)](#). By contrast, rates of change for the RPI and RPIJ are calculated from the published rounded indices.

Further information on the methods used to construct the CPI, CPIH, RPI and RPIJ, including differences in the methods used for each index can be found in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#) provides further details of how consumer price statistics are used more generally.

### 4. Revisions Policy

On 15 October 2013, ONS published a [revisions policy \(49.6 Kb Pdf\)](#) for its suite of consumer price inflation statistics. The policy reaffirms the existing practices for CPI and RPI and sets out the policies for the new CPIH and RPIJ measures.

In summary, CPI, CPIH and RPIJ are revisable in theory though revisions only occur under exceptional circumstances. The RPI is never revised once published.

## 5. Publication Policy

This bulletin includes the January 2015 data, collected on and around 13 January 2015. Future [publication dates](#) for this statistical bulletin are available to January 2017 (the publication of the December 2016 inflation figures). Publication dates from February 2016 onwards are provisional.

Details of the policy governing the release of new data are available from the Media Relations Office. Also available is a list of the names of those given [pre-release access](#) to the contents of this release.

Consumer price inflation for February 2014 to February 2015 will be published on 24 March 2015.

1 More detailed CPI, CPIH, RPI and RPIJ data are available at: <http://www.ons.gov.uk>

2 The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index. Full details can be found on the UK Statistics Authority website at <http://www.statisticsauthority.gov.uk/> and an explanatory note on the ONS website.

3 In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the code of Practice for Official Statistics and found not to meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>
