

Consumer Price Inflation, October 2014

Coverage: UK

Date: 18 November 2014

Geographical Area: UK

Theme: **Economy**

Key points

- The Consumer Prices Index (CPI) grew by 1.3% in the year to October 2014, up from 1.2% in September.
- Smaller falls in transport costs than a year ago – notably for motor fuels and air fares, and price rises for computer games were the main contributors to the rise in the rate of inflation.
- Food and motor fuel prices, which have historically been upward contributors to the 12-month CPI rate, are currently reducing it by 0.3 percentage points.
- CPIH (not a National Statistic) grew by 1.3% in the year to October 2014, up from 1.2% in September.

A brief description of Consumer Price Inflation

Consumer price inflation is the speed at which the prices of goods and services bought by households rise or fall. Consumer price inflation is estimated by using price indices. One way to understand a price index is to think of a very large shopping basket containing all the goods and services bought by households. The price index estimates changes to the total cost of this basket. ONS consumer price indices are published monthly.

ONS has published a [video](#) and an [infographic](#) that explain how consumer price inflation is calculated.

A price index can be used to measure inflation in a number of ways. The most common is to look at how the index has changed over a year. This is calculated by comparing the price index for the latest month with the same month a year ago. This is known as the 12-month inflation rate. This bulletin measures inflation to October 2014, so the 12-month rate measures changes in prices between October 2013 and October 2014.

ONS publishes a range of measures of consumer price and other price inflation. [A tale of many price indices](#) summarises information on the different measures.

Consumer Prices Index (CPI)

What is the CPI?

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. First published in 1997 as the Harmonised Index of Consumer Prices (HICP), the CPI is the inflation measure used in the Government's target for inflation.

The CPI is also used for purposes such as uprating pensions, wages and benefits and can aid in the understanding of inflation on family budgets. For more information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

Latest figure and long-term trend

The CPI 12-month rate (the amount prices change over a year) between October 2013 and October 2014 stood at 1.3%. This means that a basket of goods and services that cost £100.00 in October 2013 would have cost £101.30 in October 2014.

Over the last five years, the three main contributors to the 12-month inflation rate have been housing, water, electricity, gas & other fuels, transport (including motor fuels), and restaurants & hotels. Combined, these three sectors have, on average, accounted for half of the 12-month inflation rate each month.

In the year to October 2014, food prices fell by 1.6% and prices of motor fuels fell by 4.8%. Historically, these prices have been among the main causes of inflation, though this has gradually changed over the course of 2014. Prices for these product groups provided the largest downward contributions to the CPI 12-month rate for October. A recent article published by ONS outlines some [possible factors that may be affecting prices](#).

Figure A shows the CPI 12-month rate over the last 10 years. Table A shows the CPI 1-month rate (the amount prices change between two consecutive months), 12-month rate and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

Consumer Prices Index (CPI): What are the main movements?

This section explains which goods and services had the biggest impact on the change to the 12-month rate between September and October 2014 and, where relevant, considers the longer-term inflationary trends for these goods and services.

The change in the CPI 12-month rate can be calculated by comparing the 12-month rates for two consecutive months. An alternative, and equally valid, approach is to calculate it by comparing the price change between the latest two months and the price change between the same two months a year ago. [Explaining the contribution to change in the 12-month rate \(37.1 Kb Pdf\)](#) is a diagram explaining the calculation.

The CPI increased by 0.1% between September and October 2014, a comparable rise as between the same two months in 2013. This led to the CPI 12-month rate rising from 1.2% in September to 1.3% in October. The 0.1 percentage point difference between the movements in the annual and monthly rates is due to rounding.

The largest upward contributions to the change in the CPI 12-month rate between September and October 2014 came from:

- **Transport:** prices, overall, fell by 1.1% between September and October this year, compared with a larger fall of 1.5% between the same two months a year ago. The largest contribution came from prices for motor fuels – notably petrol. Prices have been falling this year with falling oil prices and increased price competition between supermarkets noted as possible factors. The price for petrol fell by 2.5 pence per litre between September and October this year. However this compares with a larger fall of 4.9 pence per litre between the same two months in 2013 when there were reports of a fall in wholesale fuel prices. Air fares also contributed to the rise with a smaller fall in prices on the month than a year ago, when the fall in prices between September and October was larger than usual. These upward contributions were partially offset by price movements for second hand cars and sea fares.
- **Recreation & culture:** prices, overall, rose by 0.4% between September and October 2014, compared with a more modest rise of 0.2% between the same two months a year ago. By far the largest upward contribution came from price movements for games, toys and hobbies – notably computer games where a number of new titles have been released in the run up to Christmas replacing cheaper titles in the computer games charts. The upward contribution was partially offset by small downward contributions from price movements for a broad range of other recreational goods and services.

The only notable downward contributions to the change in the CPI 12-month rate between September and October 2014 came from:

- **Furniture, household equipment & routine maintenance:** prices, overall, fell by 1.1% between September and October this year, compared with a more modest fall of 0.4% between the same two months a year ago. The largest downward contribution came from prices for furniture and furnishings – notably three piece suites and settees where there were a number of sales and reports of increased competition among retailers.

Impact of education fees

Education fees overall rose by 7.9% between September and October 2014, compared with a rise of 8.2% between the same two months in 2013. However, due to the increased expenditure on education compared to a year ago this resulted in a small upward effect on the all items 12-month rate change. The upward contribution came from UK and EU student tuition fees. These rose, overall, by 18.3% in October compared with a larger rise of 20.4% a year ago but the smaller percentage rise this year was more than compensated for by the increased expenditure weight. Of these, full time undergraduate fees increased by less than a year ago, while fees for part time and postgraduate students increased by more than in 2013.

Figure B shows the contributions from each part of the CPI basket of goods and services. A larger version of the chart can be viewed by clicking on it (HTML version only).

Figure B: Contributions to the change in the CPI 12-month rate: October 2014

United Kingdom

Source: Office for National Statistics

Notes:

1. Individual contributions may not sum to the total due to rounding.
2. More information on the contents of each group can be found in Table 3 in the accompanying consumer price inflation reference tables.

CPIH

The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index. [Full details](#) can be found on the UK Statistics Authority website and an [explanatory note \(313.9 Kb Pdf\)](#) on the ONS website.

CPIH is a measure of UK consumer price inflation that includes owner occupiers' housing costs (OOH). These are the costs of housing services associated with owning, maintaining and living in one's own home. OOH does not include costs such as utility bills, minor repairs and maintenance, which are already included in the index. CPIH uses an approach called rental equivalence to measure OOH. Rental equivalence uses the rent paid for an equivalent house as a proxy for the costs faced by an owner occupier. In other words this answers the question "how much would I have to pay in rent to live in a home like mine?" for an owner occupier. OOH does not seek to capture increases in house prices. Although this may be inconsistent with some users' expectations of measures of OOH, the inclusion of an asset price and therefore capital gains would make the index less suitable for a measure of consumption. OOH currently accounts for just over 15% of the expenditure weight of CPIH. This has increased notably from a weight of 10% in 2005.

Currently, the method of calculation, the population coverage and the basket of goods and services are the same as the Consumer Prices Index (CPI), with the exception of OOH. The method of deriving the weights for CPIH and the data used for these are also the same as for CPI, with the exception of OOH. This can result in some differences from the CPI.

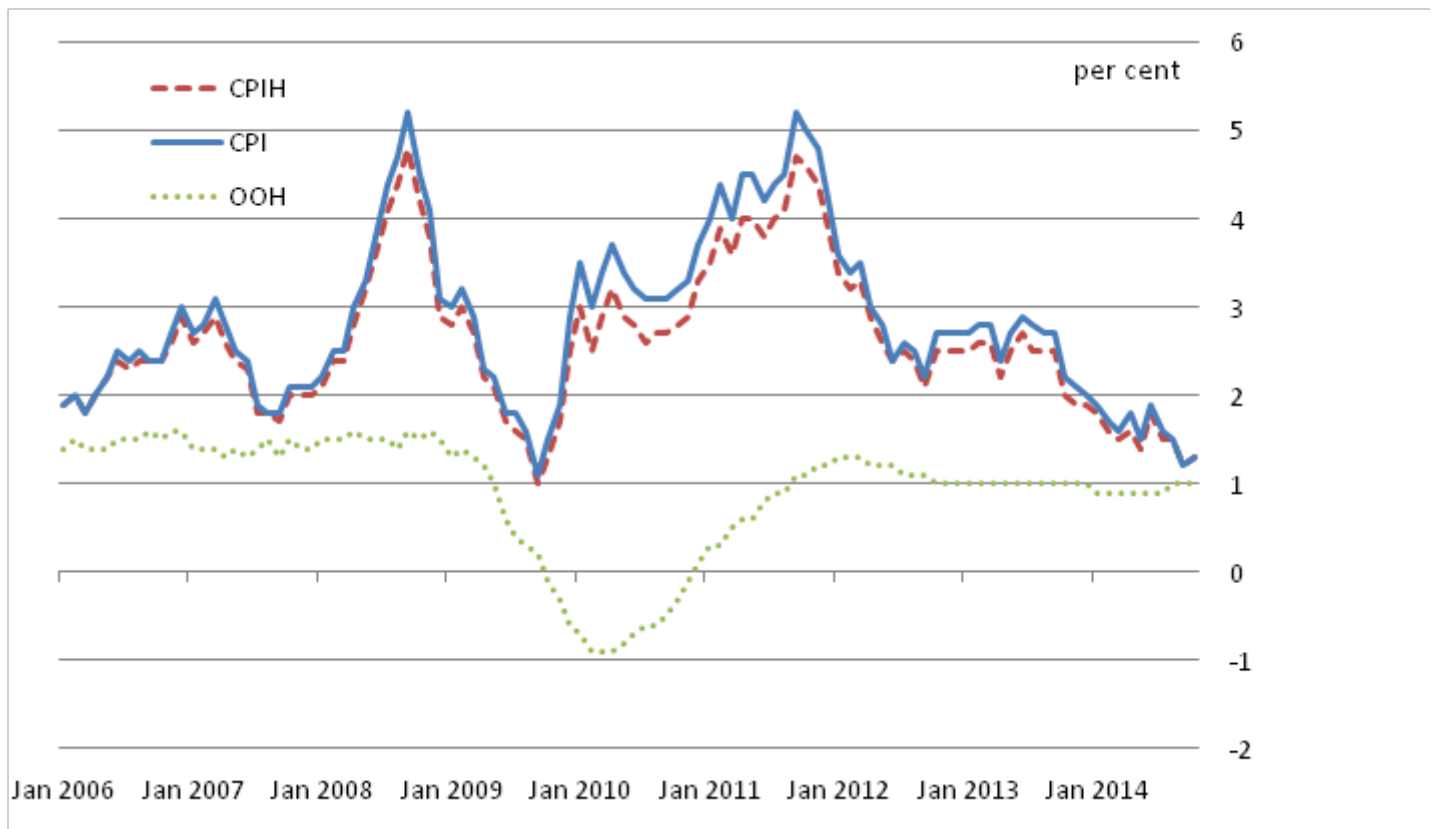

In October 2014, the 12-month rate (the rate at which prices increased between October 2013 and October 2014) for CPIH stood at 1.3%, up from 1.2% in September.

There was no difference between the CPI and CPIH 12-month rates in October 2014. Owner occupiers' housing costs increased by 0.1% between September and October 2014, a comparable rise as between these months a year earlier. These costs were responsible for a small upward contribution to the CPIH 12-month rate, though this was not of sufficient magnitude to create a difference between CPIH and CPI.

Figure C shows the CPIH and OOH component 12-month rates since January 2006 (the earliest date for which the CPIH 12-month rate can be calculated). The CPI 12-month rate has been included for comparative purposes. Table B shows the CPIH and OOH component 1-month and 12-month rates and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

Figure C: CPIH, OOH component and CPI 12-month rates since January 2006

United Kingdom

Source: Office for National Statistics

Notes:

1. The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index.
2. The time series for this chart will be gradually increased up to a time span of 10 years as more periods of data become available.

Retail Prices Index (RPI) and RPIJ

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

The RPI is a long-standing measure of UK inflation that has historically been used for a wide range of purposes such as the indexation of pensions, rents and index-linked gilts. For further information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

RPIJ is an improved variant of the Retail Prices Index, which is calculated using formulae that meet international standards. The rationale for creating RPIJ was to give users a better alternative to the RPI if their needs were for a measure of inflation based on the same population, classifications, weights etc as the RPI. Currently, RPIJ also acts as an analytical series in that it allows users to see the impact of using the Jevons (which meets international standards) in place of the Carli formula (which does not meet international standards) in the RPI. The use of the different formulae at the elementary aggregate level is currently the only difference between the two indices. ONS does not produce detailed goods and services indices for RPIJ.

In October 2014, the 12-month rate for RPIJ stood at 1.7%, up from 1.6% in the year to September.

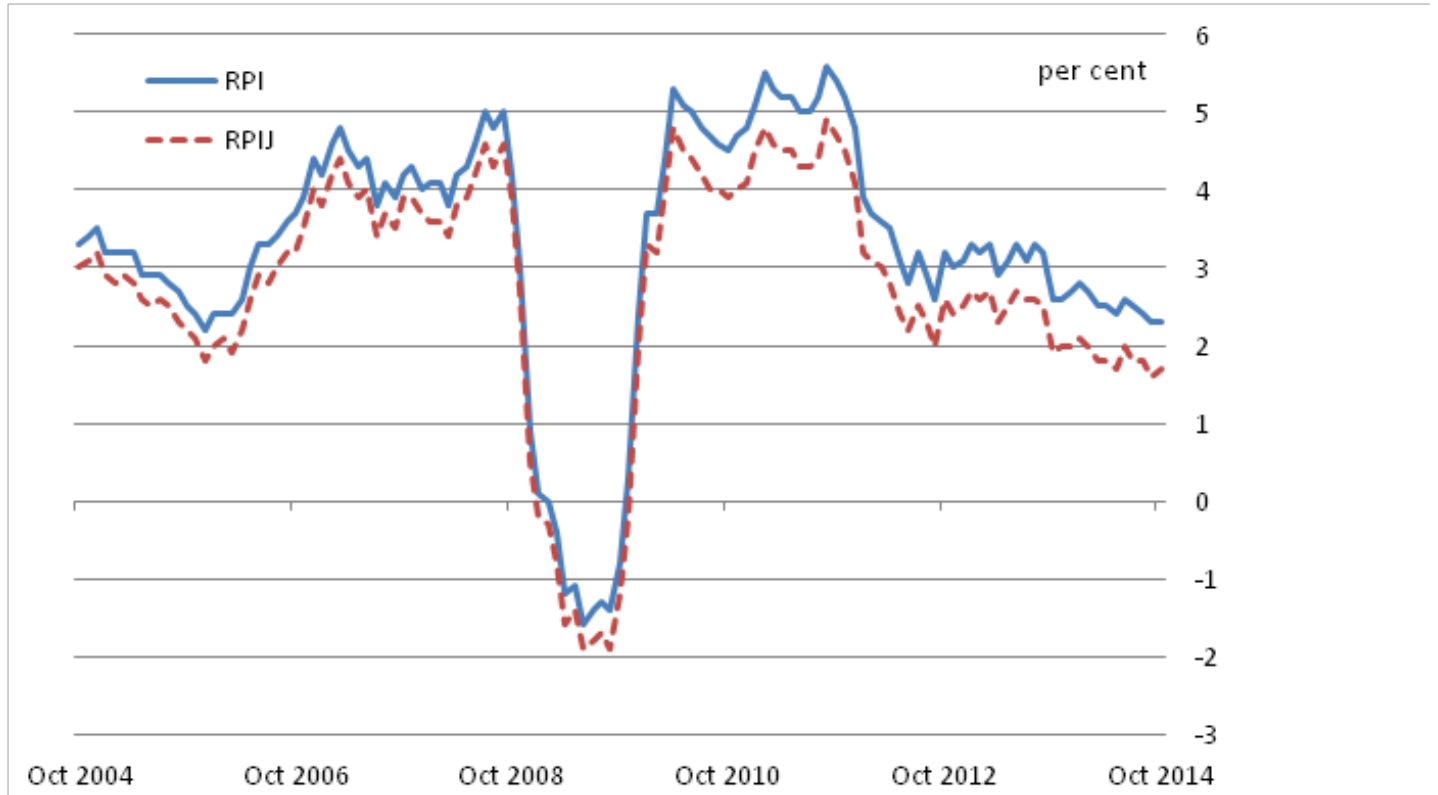

The RPI 12-month rate for October 2014 stood at 2.3%, meaning that it was 0.6 percentage points higher than it would have been had it used formulae that meet international standards.

Figure D shows the RPI and RPIJ 12-month rates for the last 10 years. Over this period the RPIJ 12-month rate has been, on average, 0.5 percentage points lower than the RPI but the difference has increased to an average of 0.6 percentage points over the last 3 years. Cumulatively, inflation as measured by the RPI is 36.6% over the 10-year period, compared with 29.9% as measured by the RPIJ. The use of the Carli formula has therefore added 6.7 percentage points to the change in prices over the last 10 years. A larger version of the chart can be viewed by clicking on it (HTML version only).

Table C shows the RPI and RPIJ 1-month and 12-month rates and index values for the last year.

Background notes

1. **News**

On 07 November, ONS published a short story called [‘What is affecting prices in the UK in 2014?’](#). The article considers possible causes behind falling food and motor fuel prices.

On 07 October, ONS published a [consultation on the development of a definitive house price index for the UK \(279.7 Kb Pdf\)](#). The consultation seeks users’ views regarding how the proposed methodology for a definitive house price index meets their requirements for official house price data. Details on how to respond can be found on the [ONS website \(279.7 Kb\)](#)

[Pdf](#)) or by e-mailing christopher.jenkins@ons.gsi.gov.uk. The closing date for responses is 12 December 2014.

On 03 December ONS will publish experimental estimates of owner occupiers' housing costs, calculated using the net acquisitions approach. These estimates are being produced in response to a European legal requirement.

The UK Statistics Authority has published a [letter](#) from the National Statistician and the Chair of the Authority, plus a [response](#) concerning progress in the work ONS has been conducting in collaboration with the Valuation Office Agency to improve the owner occupiers' housing costs component of CPIH.

2. Understanding and accessing the data

A full description of how consumer price indices are compiled is given in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). This is supplemented by video, infographics and textual information available from the [guidance and methodology section](#) of the ONS website.

A more detailed [quality report \(141.9 Kb Pdf\)](#) for this statistical bulletin is available. The report assesses consumer price inflation statistics against standard dimensions of quality such as relevance, accuracy and accessibility. The report was last updated in October 2013.

The [mini Triennial Review \(1.75 Mb Pdf\)](#) of the CPI and RPI Central Collection of Prices is available.

The most efficient way to access the latest consumer price inflation data and briefing on the ONS website is via the CPI key figure on the [homepage](#).

In response to user feedback, all consumer price inflation data are available in one location. The [Consumer Price Inflation Reference Tables \(1.5 Mb Excel sheet\)](#) are provided via an Excel file.

To help users further, very detailed CPI data are now available including the [individual price quotes and item indices](#) that underpin the CPI. Please note, the data that are published are at a level which means that no individual retailer or service provider will be able to be identified. The data published cover January 1996 to June 2014. These data are updated once a quarter with around a two-month lag with the latest CPI publication. For example, the data will next be updated when the November CPI is published on 16 December 2014, at which point the detailed data published will be extended to September 2014.

Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union according to rules specified in a series of European regulations developed by the European Commission (Eurostat) in conjunction with the EU Member States. Eurostat released figures for the Harmonised Index of Consumer Prices (HICP) for the month of October 2014 for EU Member States, together with an EU average, on 14 November 2014. A summary of the latest European data is available from [Eurostat's database tables](#). Further information on HICP for the European Union, Euro area and other EU Member States is available from [Eurostat's HICP web page](#).

3. **Methods - CPI and other measures of inflation**

The CPI, CPIH, RPIJ and RPI are compiled using the same underlying price data, based on a large and representative selection of almost 700 individual goods and services for which price movements are measured in around 140 randomly selected areas throughout the UK. Around 180,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for one year at a time.

The selection of goods and services that are priced to compile these indices is reviewed annually. The contents of the 2014 basket are described in an article [Consumer Price Inflation: The 2014 Basket of Goods and Services \(138.6 Kb Pdf\)](#). The expenditure weights used to compile the indices are also updated each year. Additional details of the updated weights for 2014 are available from the National Statistics website in an article published on 25 April 2014 entitled [Consumer Price Inflation Statistics - Updating Weights for 2014 \(123.7 Kb Pdf\)](#).

Rates of change for the CPI and CPIH are calculated from unrounded index levels, rather than from the published indices which are rounded to one decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels for the CPI and CPIH are available on request. By contrast, rates of change for the RPI and RPIJ are calculated from the published rounded indices.

Further information on the methods used to construct the CPI, CPIH, RPI and RPIJ, including differences in the methods used for each index can be found in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#) provides further details of how consumer price statistics are used more generally.

4. **Revisions Policy**

On 15 October 2013, ONS published a [revisions policy \(49.6 Kb Pdf\)](#) for its suite of consumer price inflation statistics. The policy reaffirms the existing practices for CPI and RPI and sets out the policies for the new CPIH and RPIJ measures.

In summary, CPI, CPIH and RPIJ are revisable in theory though revisions only occur under exceptional circumstances. The RPI is never revised once published.

5. **Publication Policy**

This bulletin includes the October 2014 data, collected on and around 14 October 2014. Future [publication dates](#) for this statistical bulletin are available to January 2017 (the publication of the December 2016 inflation figures). Publication dates from February 2016 onwards are provisional.

Details of the policy governing the release of new data are available from the Media Relations Office. Also available is a list of the names of those given [pre-release access](#) to the contents of this release.

Consumer price inflation for November 2013 to November 2014 will be published on 16 December 2014.

1 Inflation rates prior to 1997 and index levels prior to 1996 are estimated. (Details are given in Economic Trends No.541 December 1998 available on the Office for National Statistics website)

2 More detailed CPI, CPIH, RPI and RPIJ data are available at: <http://www.ons.gov.uk>

3 The National Statistics status of CPIH has been discontinued pending work by ONS to investigate and improve the method for measuring owner occupiers' housing costs in this index. Full details can be found on the UK Statistics Authority website at <http://www.statisticsauthority.gov.uk/> and an explanatory note on the ONS website.

4 In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the code of Practice for Official Statistics and found not to meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>
