

Consumer Price Inflation, August 2013

Coverage: UK

Date: 17 September 2013

Geographical Area: UK

Theme: **Economy**

Key points

- The Consumer Prices Index (CPI) grew by 2.7% in the year to August 2013, down from 2.8% in July.
- The largest contributions to the fall in the rate came from the transport (particularly motor fuels and air transport) and clothing sectors. These were partially offset by an upward contribution from furniture, household equipment & maintenance.
- The other main inflation measures were unchanged between July and August: CPIH grew by 2.5% and RPIJ grew by 2.6%.
- These latest numbers continue the trend of broadly steady inflation seen since spring 2012.

A brief description of Consumer Price Inflation

Consumer price inflation is the speed at which the prices of goods and services bought by households rise or fall. Consumer price inflation is estimated by using price indices. One way to understand a price index is to think of a very large shopping basket containing all the goods and services bought by households. The price index estimates changes to the total cost of this basket. ONS consumer price indices are published monthly.

A price index can be used to measure inflation in a number of ways. The most common is to look at how the index has changed over a year. This is calculated by comparing the price index for the latest month with the same month a year ago. This is known as the 12-month inflation rate. This bulletin measures inflation to August 2013, so the 12-month rate measures changes in prices between August 2012 and August 2013.

ONS publishes a range of measures of consumer price and other price inflation. [A tale of many price indices](#) summarises information on the different measures.

Consumer Prices Index (CPI)

What is the CPI?

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. First published in 1997 as the Harmonised Index of Consumer Prices (HICP), the CPI is the inflation measure used in the Government's target for inflation.

The CPI is also used for purposes such as uprating pensions, wages and benefits and can aid in the understanding of inflation on family budgets. For more information on the uses of the CPI see [How ONS consumer price statistics are used](#).

Latest Figure and Long-Term Trend

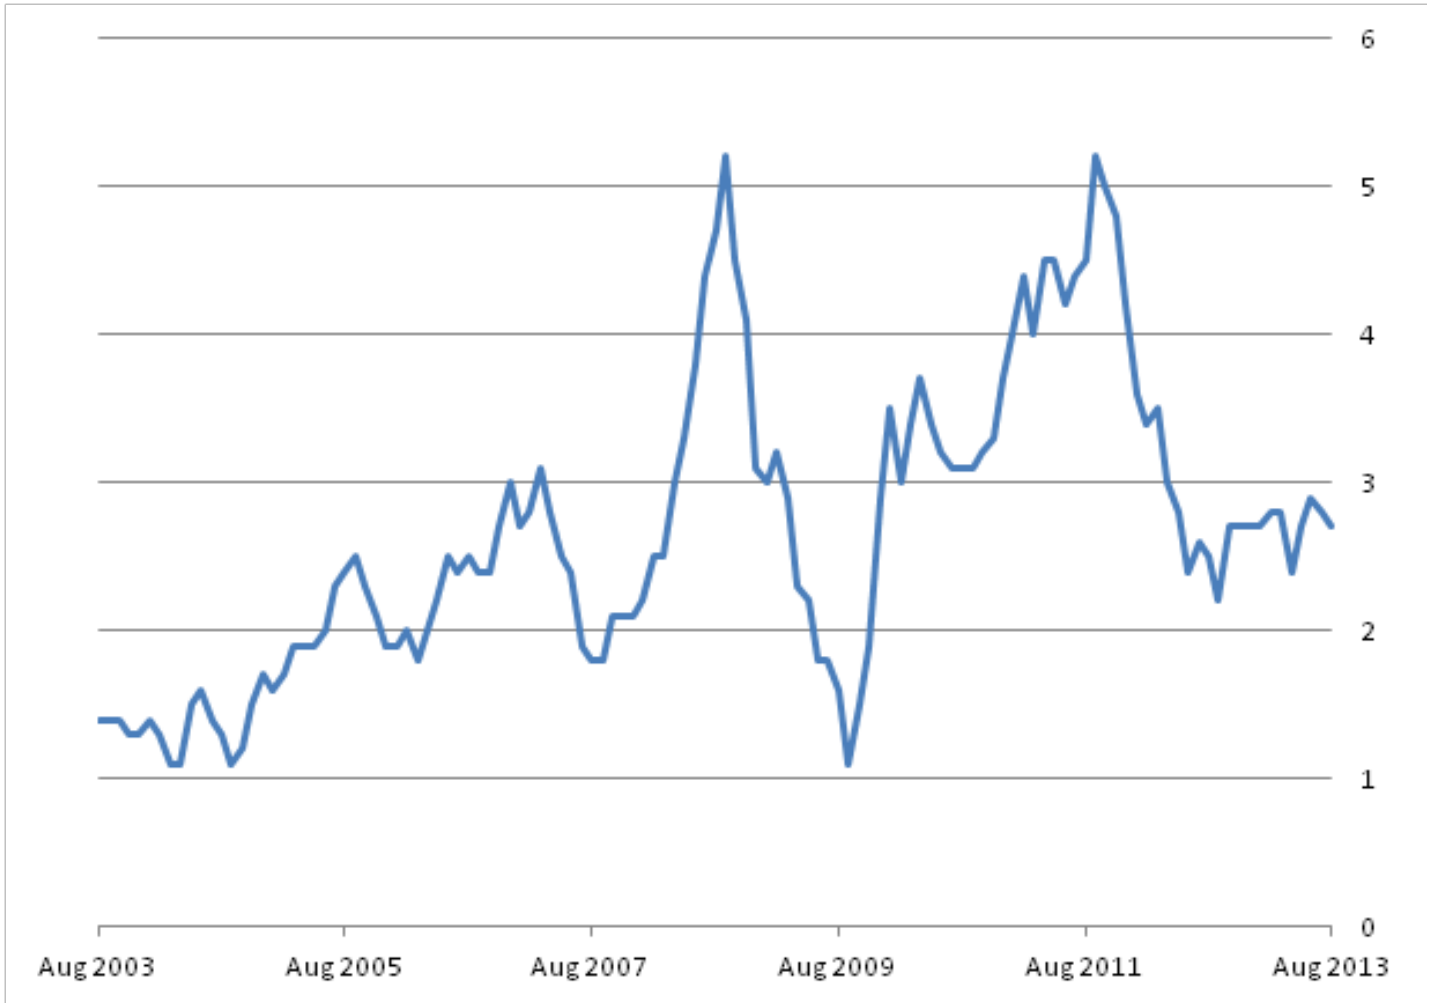

The CPI 12-month rate (the amount prices change over a year) between August 2012 and August 2013 stood at 2.7%. This means that a basket of goods and services that cost £100.00 in August 2012 would have cost £102.70 in August 2013. The 12-month rate continues the trend seen since spring 2012 of broadly steady growth in inflation.

Over the last five years, the three main contributors to the 12-month inflation rate have been food & non-alcoholic beverages; housing, water, electricity, gas & other fuels; and transport (including motor fuels). Combined, these three sectors have, on average, accounted for over half of the 12-month inflation rate each month.

Figure A below shows the CPI 12-month rate over the last 10 years. Table A below shows the CPI 1-month (the amount prices change between two consecutive months) and 12-month rates and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

Consumer Prices Index (CPI): What are the main movements?

This section explains which goods and services had the biggest impact on the change to the 12-month rate between July and August 2013 and (where relevant) considers the longer-term inflationary trends for these goods and services.

The change in the CPI 12-month rate can be calculated by comparing the 12-month rates for two consecutive months. An alternative, and equally valid approach, is to calculate it by comparing the price change between the latest two months and the price change between the same two months a year ago. [Explaining the contribution to change in the 12-month rate](#) is a diagrammatic explanation of the calculation.

The CPI rose by 0.4% between July and August 2013, compared with a rise of 0.5% between the same two months in 2012. The 1-month movement was therefore 0.1 percentage points higher last year compared with this year. This led to the CPI 12-month rate falling slightly from 2.8% in July to 2.7% in August.

The largest downward contributions to the change in the CPI 12-month rate between July and August 2013 came from:

- **transport:** prices, overall, rose by 1.0% between July and August 2013 compared with a larger rise of 1.3% between the same two months in 2012. The downward contribution came principally from motor fuels and air transport. Petrol prices rose by 2.0 pence per litre this year, to stand at £1.37 in August, compared with a rise of 3.5 pence per litre, to £1.35, last year. Diesel prices rose by 2.0 pence per litre this year compared with a rise of 3.3 pence a year ago. Similarly air fares rose by 9.4% between July and August this year compared with 10.2% a year ago. The main downward effect came from domestic routes.
- **clothing & footwear:** overall, prices for clothing & footwear usually rise between July and August as autumn ranges enter the shops and this year they rose by 2.0% compared with a larger rise of 2.8% a year ago. The main downward effect came from garments, particularly from a variety of women's outerwear items.

The largest upward contribution to the change in the CPI 12-month rate between July and August 2013 came from:

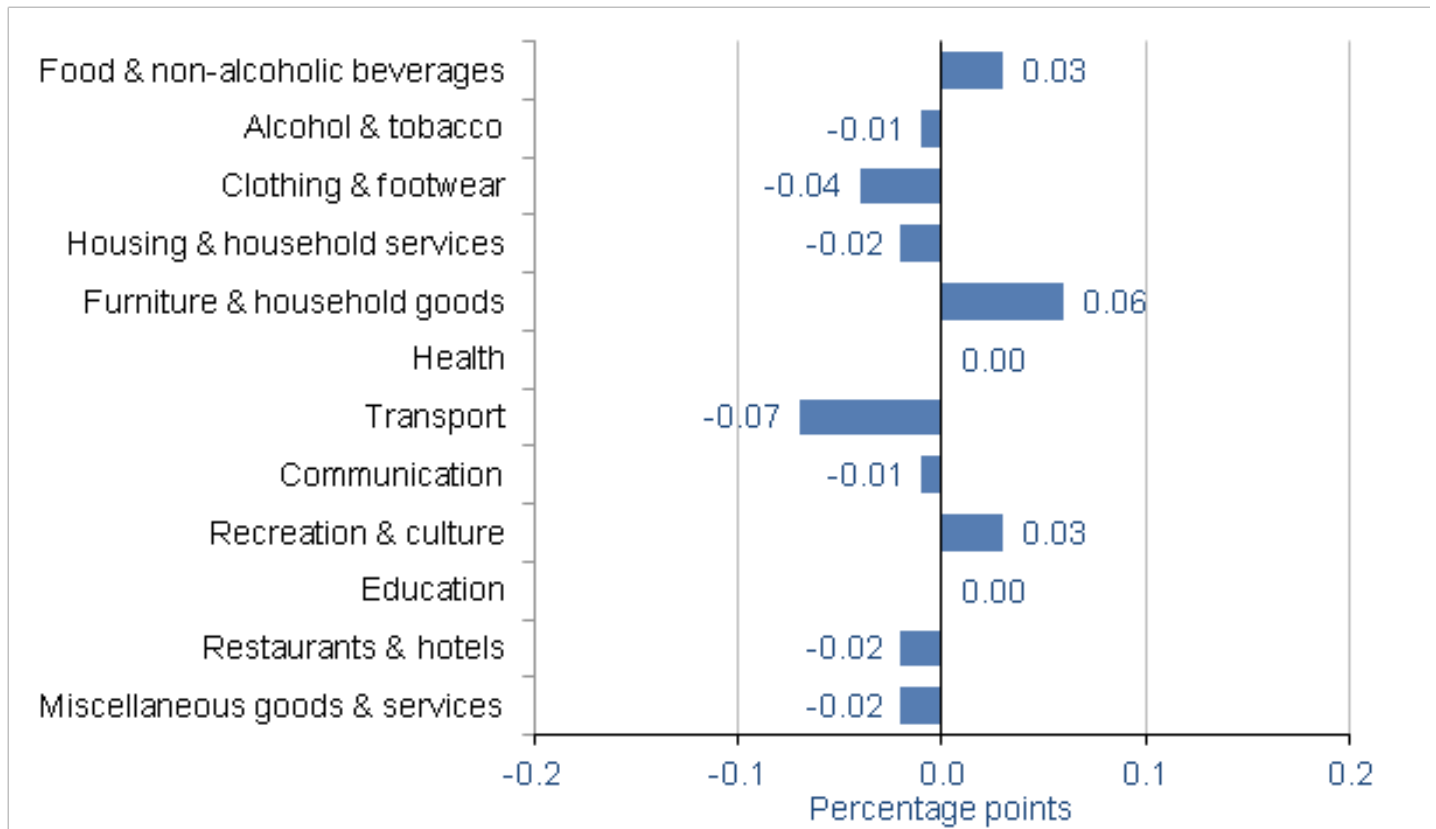

- **furniture, household equipment & maintenance:** prices, overall, rose by 1.8% between July and August 2013 compared with 0.8% between the same two months a year ago. The upward contribution came principally from furniture & furnishings and major appliances & small electric goods.

There were smaller upward contributions from **recreation & culture** (particularly games, toys & hobbies) and **food & non-alcoholic beverages**.

Figure B below shows the contributions from each part of the CPI basket of goods and services. A larger version of the chart can be viewed by clicking on it (HTML version only).

Figure B: Contributions to the change in the CPI 12-month rate: August 2013

United Kingdom

Source: Office for National Statistics

Notes:

1. Individual contributions may not sum to the total due to rounding.
2. More information on the contents of each group can be found in table 3 at the end of the bulletin.

CPIH

CPIH is a new measure of UK consumer price inflation that includes owner occupiers' housing costs (OOH). These are the costs of housing services associated with owning, maintaining and living in one's own home. OOH does not include costs such as utility bills and minor repairs and maintenance which are already included in the index. CPIH uses an approach called rental equivalence to measure OOH. Rental equivalence uses the rent paid for an equivalent house as a proxy for the costs faced by an owner occupier. In other words this answers the question "how much would I have to pay in rent to live in a home like mine?" for an owner occupier. OOH does not seek to capture increases in house prices. Although, this may be inconsistent with some users' expectations of measures of OOH, the inclusion of an asset price and therefore capital gains makes

the measure less suitable for a measure of consumption. OOH currently accounts for just over 12% of the expenditure weight of CPIH. This has increased gradually from a weight of 10% in 2005.

Currently, the method of calculation, the population coverage and the basket of goods and services are the same as the Consumer Prices Index (CPI), with the exception of OOH. The method of deriving the weights for CPIH and the data used for these are also the same as for CPI, with the exception of OOH. This can result in some differences from the CPI.

ONS currently classifies CPIH as an [experimental statistic](#). On 25 July 2013 the UK Statistics Authority published its assessment of consumer price statistics ([Statistics on Consumer Price Inflation](#)). The Authority determined that CPIH could be designated as a National Statistic subject to ONS implementing a number of enhancements by the end of 2013. ONS will remove the experimental statistics classification from CPIH once these enhancements have been made. For further information on CPIH please see [Introducing the new CPIH measure of Consumer Price Inflation, 2005 to 2012](#).

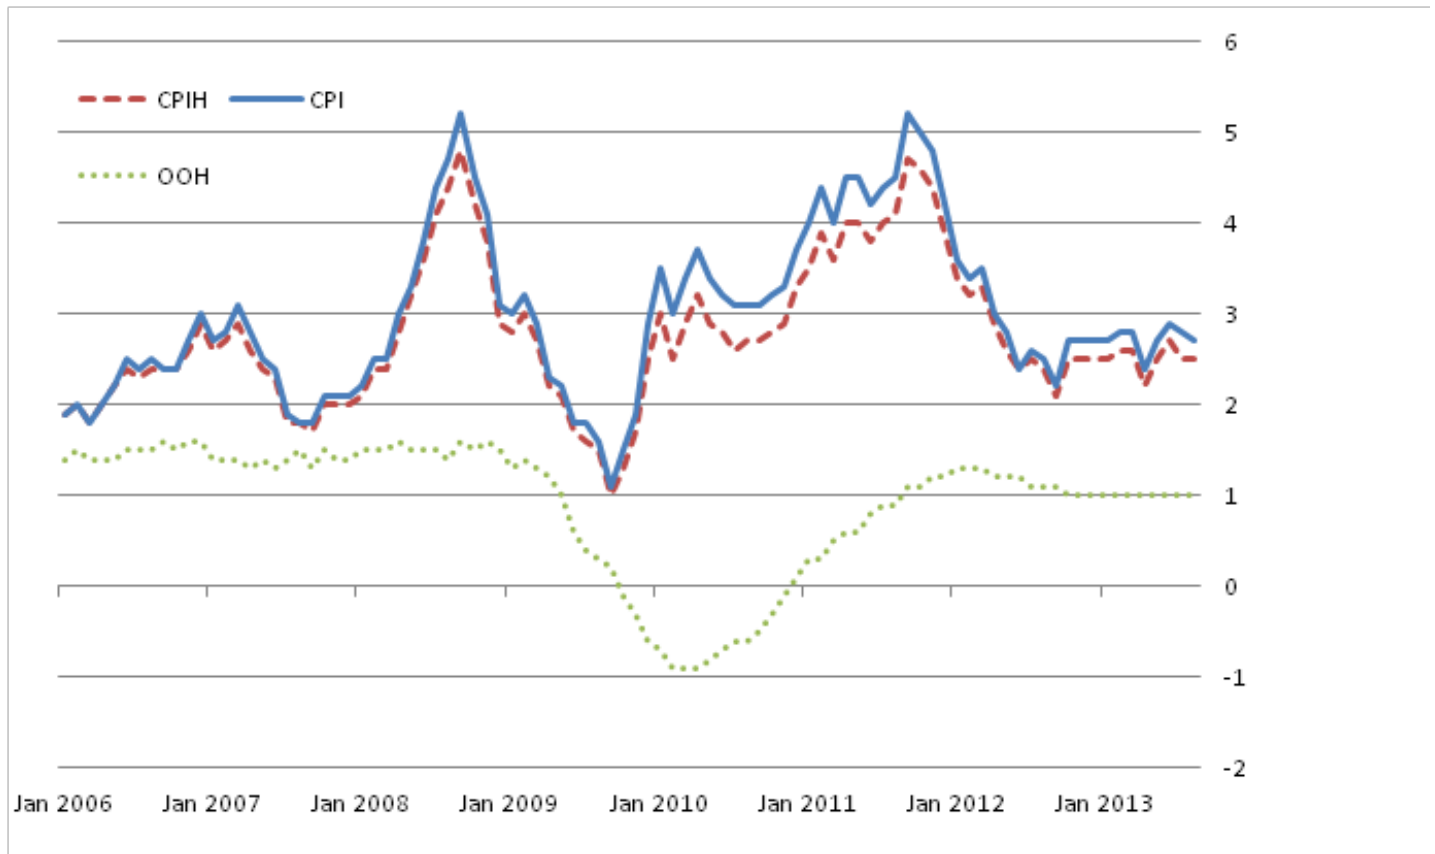

In August 2013, the 12-month rate (the rate at which prices increased between August 2012 and August 2013) for CPIH stood at 2.5%, unchanged from July.

The difference between the CPI and CPIH annual rates in August 2013 was 0.2 percentage points, 0.1 percentage points less than the difference in July. Owner occupiers' housing costs rose by 0.1% between July and August 2013, and also by 0.1% between July and August 2012. The 1-month movement was therefore the same in both years and this meant that OOH had no impact on the change in the overall CPIH 12-month rate between the two months. The lack of movement in the CPIH rate of growth compared with the fall in the CPI was due to rounding.

Figure C below shows the CPIH and OOH component 12-month rates since January 2006 (the earliest date for which the CPIH 12-month rate can be calculated). The CPI 12-month rate has been included for comparative purposes. Table B below shows the CPIH and OOH component 1-month and 12-month rates and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

Figure C: CPIH, OOH component and CPI 12-month rates since January 2006

United Kingdom

Source: Office for National Statistics

Notes:

1. The time series for this chart will be gradually increased up to a time span of 10 years as more periods of data become available.
2. ONS currently classifies CPIH and OOH as experimental statistics. They are not currently National Statistics.

Retail Prices Index (RPI) and RPIJ

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

The RPI is a long-standing measure of UK inflation that has historically been used for a wide range of purposes such as the indexation of pensions and rents and index-linked gilts. For further

information on current and historic uses of the RPI please see [How ONS consumer price statistics are used](#).

RPIJ is an improved variant of the Retail Prices Index which is calculated using formulae that meet international standards. The rationale for creating RPIJ was to give users a better alternative to the RPI if their needs were for a measure of inflation based on the same population, classifications, weights etc as the RPI. Currently, RPIJ also acts as an analytical series, in that it allows users to see the impact of using the Jevons (which meets international standards) in place of the Carli formula (which does not meet international standards) in the RPI. The use of the different formulae at the elementary aggregate level is currently the only difference between the two indices. ONS does not produce detailed goods and services indices for RPIJ.

ONS currently classifies RPIJ as an [experimental statistic](#). On 25 July 2013 the UK Statistics Authority published its assessment of consumer price statistics ([Statistics on Consumer Price Inflation](#)). The Authority determined that RPIJ could be designated as a National Statistic subject to ONS implementing a number of enhancements by the end of 2013. ONS will remove the experimental statistics classification from RPIJ once these enhancements have been made. For further information on RPIJ please see [Introducing the new RPIJ measure of Consumer Price Inflation, 1997 to 2012](#).

In August 2013, the 12-month rate (the rate at which prices increased between August 2012 and August 2013) for RPIJ stood at 2.6%, unchanged from July. This continues the trend of fairly stable RPIJ inflation seen since spring 2012. Over this period RPIJ and CPIH 12-month rates have closely tracked each other.

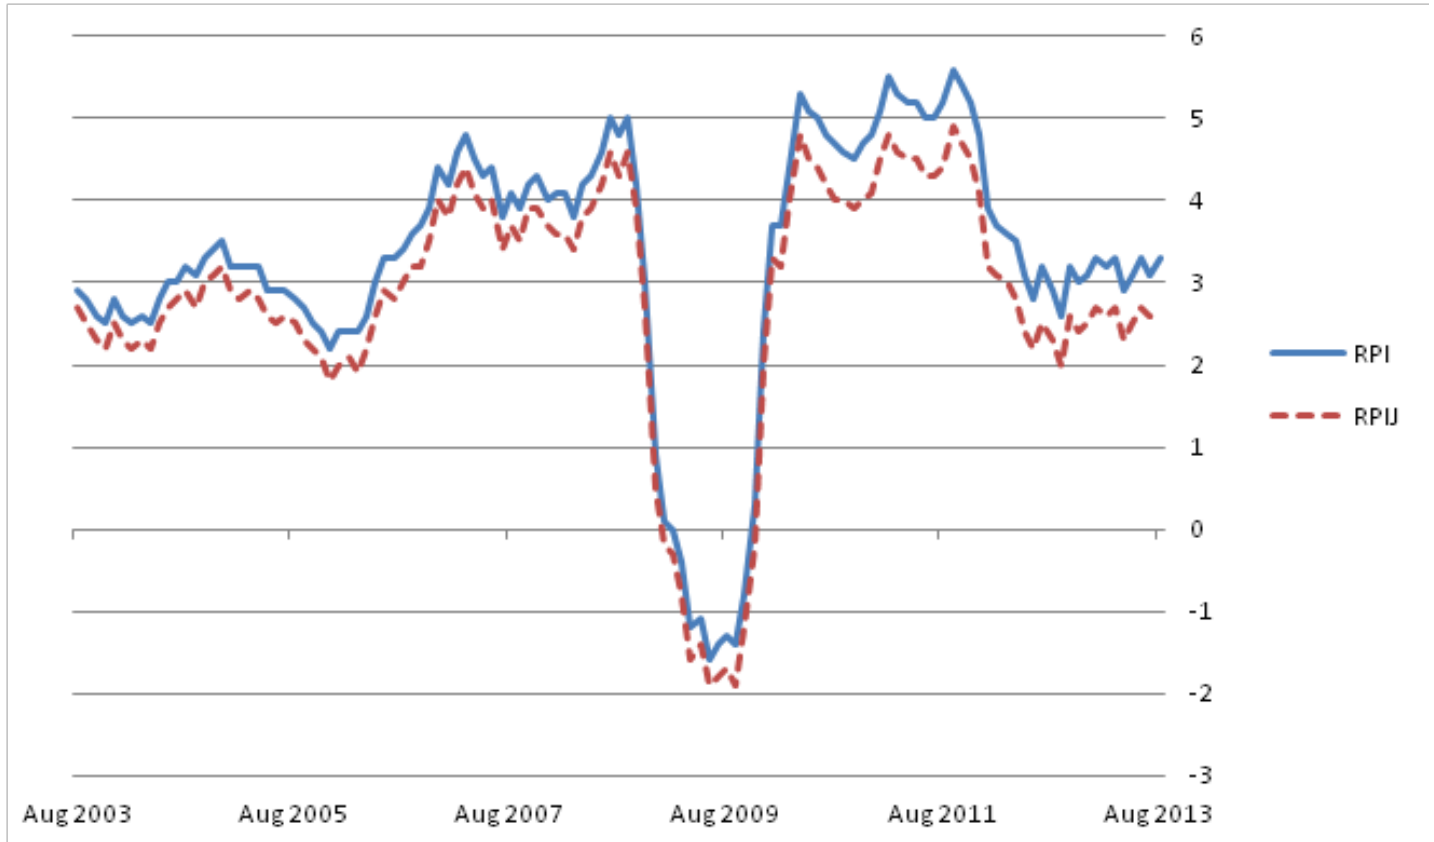

The RPI 12-month rate for August stood at 3.3%, meaning that it was 0.7 percentage points higher than it would have been had it used formulae that meet international standards.

Figure D below shows the RPI and RPIJ 12-month rates for the last 10 years. Over this period the RPIJ 12-month rate has been, on average, 0.5 percentage points lower than the RPI. Cumulatively, inflation as measured by the RPI is 38.2% over this period, compared with 31.8% as measured by the RPIJ. The use of the Carli formula has therefore added 6.4 percentage points to the change in prices over the last 10 years. A larger version of the chart can be viewed by clicking on it ([HTML version only](#)).

Table C shows the RPI and RPIJ 1-month and 12-month rates and index values for the last year.

Figure D: RPI and RPIJ 12-month rates for the last 10 years: August 2003 to August 2013

United Kingdom

Source: Office for National Statistics

Notes:

1. The RPI has been de-designated as a National Statistic and RPIJ is currently designated as an experimental statistic by ONS.

Background notes

1. Next month

Consumer price inflation for September 2012 to September 2013 will be published on 15 October 2013.

2. National Statistics Assessment of Consumer Price Statistics

On 25 July 2013, the UK Statistics Authority published its assessment of CPI, CPIH and RPIJ against the code of compliance for official statistics. The report confirmed that the CPI has retained its National Statistics status and that CPIH and RPIJ can be designated as National Statistics subject to ONS implementing a number of enhancements by the end of 2013. The full report can be downloaded from the UK Statistics Authority website ([Statistics on Consumer Price Inflation](#)). The Authority published its assessment of the RPI on 14 March 2013 ([The Retail Prices Index](#)) which found the RPI not to meet the required standard for designation as National Statistics.

3. Methodology

The CPI, CPIH, RPIJ and RPI are compiled using the same underlying price data, based on a large and representative selection of almost 700 individual goods and services for which price movements are measured in around 150 randomly selected areas throughout the UK. Around 180,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for one year at a time.

The selection of goods and services that are priced to compile these indices is reviewed annually. The contents of the 2013 basket are described in an article [Consumer Prices Index and Retail Prices Index: the 2013 Basket of Goods and Services \(354.4 Kb Pdf\)](#). The expenditure weights used to compile the indices are also updated each year. Additional details of the updated weights for 2013 are available from the National Statistics website in an article published on 26 April 2013 entitled [Consumer Prices Index and Retail Prices Index: Updating Weights for 2013](#).

Rates of change for the CPI and CPIH are calculated from unrounded index levels, rather than from the published indices, which are rounded to one decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels for the CPI and CPIH are available on request. By contrast, rates of change for the RPI and RPIJ are calculated from the published rounded indices.

4. Revisions Policy

CPI indices are revisable although the only time the CPI all items index has been revised was when the index was re-referenced to 2005=100, which took place with the publication of the January 2006 indices.

ONS currently classifies both CPIH and RPIJ as [experimental statistics](#). They currently follow revisions practices for CPI and RPI and specific policies have yet to be developed.

Once the RPI indices are published they are never revised.

5. Comparability

The CPI's coverage of goods and services was extended in stages in the areas of health, education, childcare and insurance, with effect from the January 2000, 2001 and 2002 indices.

In 2000, there was also a change to the population basis for the weights which was broadened from private households to include expenditure by foreign visitors and residents of institutional households. Further details can be found in a series of articles in the [CPI methodology section](#) of the Office for National Statistics website.

The official CPI series starts in 1996 but estimates for earlier periods are available back to 1988. These estimates are broadly consistent with data from 1996 but should be treated with some caution. [Harmonised Index of Consumer Prices: Historical Estimates \(106 Kb Pdf\)](#) provides more detail.

The CPIH's coverage of goods and services is currently the same as the CPI's, with the addition of a measure of owner occupiers' housing costs. A historical series is available back to 2005. Further details can be found in [Introducing the new CPIH measure of Consumer Price Inflation, 2005 to 2012](#).

RPI data are available back to 1947 but have been re-referenced on several occasions since then, generally accompanied by changes to the coverage and/or structure of the detailed sub-components. Details of these changes are given in Appendices 1 and 2 of the [Consumer Price Indices Technical Manual](#).

RPIJ data are available back to 1997. Further details can be found in [Introducing the new RPIJ measure of Consumer Price Inflation, 1997 to 2012](#).

6. Other measures of inflation – main uses and methodological details

Detailed explanations of the main uses and methodology used to construct the RPI and how it differs from the CPI can be found in Chapter 9 of the [Consumer Price Indices Technical Manual](#). More information on CPIH and RPIJ can be found in the articles linked above. Information on those measures will be added to the Technical Manual in the next update which is due to be published before the end of 2013. [How ONS consumer price statistics are used \(67.2 Kb Pdf\)](#) provides further details of how consumer price statistics are used more generally.

7. Accessibility

The most efficient way to access the latest consumer price inflation data and briefing on the ONS website is via the CPI key figure on the [homepage](#).

In response to user feedback, all consumer price inflation data are available in one location. The [Consumer Price Inflation Reference Tables \(1.22 Mb Excel sheet\)](#) are provided via an excel file.

To further help users, very detailed CPI data are now available including the [individual price quotes and item indices](#) that underpin the CPI. Please note that the data that are published are at a level which means that no individual retailer or service provider will be able to be identified. Previously the data published covered January 1996 to March 2013. The data for April to June 2013 are also now available. These data are updated once a quarter with around a two month lag with the latest CPI publication. For example, the data will next be updated when the November CPI is published on 17 December 2013, at which point the detailed data published will be extended to September 2013.

This bulletin includes the August 2013 data, collected on 13 August 2013. Future [publication dates](#) for this statistical bulletin are available to January 2016 (the publication of the December 2015 inflation figures). Publication dates from February 2015 onwards are provisional.

Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union according to rules specified in a series of European regulations developed by the European Commission (Eurostat) in conjunction with the EU Member States. Eurostat released figures for the Harmonised Index of Consumer Prices (HICP) for the month of August 2013 for EU Member States, together with an EU average, on 16 September 2013. A summary of the latest European data is available from [Eurostat's database tables](#). Further information on HICP for the European Union, Eurozone and other EU Member States is available from [Eurostat's HICP web page](#).

8. Further information

A more detailed [quality report \(141.9 Kb Pdf\)](#) for this statistical bulletin is available. The report assesses consumer price inflation statistics against standard dimensions of quality such as relevance, accuracy and accessibility. The report was last updated in December 2011.

The [mini Triennial Review \(1.75 Mb Pdf\)](#) of the CPI and RPI Central Collection of Prices is available.

A full description of how consumer price indices are compiled is given in the [Consumer Price Indices Technical Manual](#). This is supplemented by other technical articles available from the [guidance and methodology section](#) of the ONS website.

Further information on consumer price inflation statistics, including details of the methodology used to construct the indices, articles, historic data etc, is available on the [Consumer Price Indices Taxonomy page](#).

9. General

Details of the policy governing the release of new data are available from the Media Relations Office. Also available is a list of the names of those given [pre-release access](#) to the contents of this release.

1 Inflation rates prior to 1997 and index levels prior to 1996 are estimated. (Details are given in Economic Trends No.541 December 1998 available on the Office for National Statistics website)

2 More detailed CPI, CPIH and RPI data are available at: <http://www.ons.gov.uk>

3 The CPIH and RPIJ figures in this table are designated as 'experimental statistics' by ONS as they are new official statistics undergoing evaluation. Both have been assessed for National Statistics Status and will become National Statistics subject to ONS implementing a number of enhancements before the end of 2013. ONS will remove the experimental statistics classification from CPIH and RPIJ once these enhancements have been made.

4 In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the code of Practice for Official Statistics and found not to meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>

Source: Office for National Statistics

1 The CPIH and RPIJ figures in this table are designated as 'experimental statistics' by ONS as they are new official statistics undergoing evaluation. Both have been assessed for National Statistics Status and will become National Statistics subject to ONS implementing a number of enhancements before the end of 2013. ONS will remove the experimental statistics classification from CPIH and RPIJ once these enhancements have been made.
