

Consumer Price Inflation, March 2013

Coverage: UK

Date: 16 April 2013

Geographical Area: UK

Theme: **Economy**

Key points

- The Consumer Prices Index (CPI) grew by 2.8% in the year to March 2013, unchanged from February.
- The contributions to change in the CPI from the various detailed categories were relatively small compared with most months. The largest upward contribution came from the recreation & culture sector where there were price rises for audio-visual equipment and books, newspapers & stationery.
- The largest downward contributions came from furniture & furnishings, motor fuels and meat.
- The CPI remained broadly flat through the second half of 2012 and into 2013 following a number of years of large increases and decreases. Over the last six months, the CPI 12-month rate has been particularly stable, standing at 2.7% for four months followed by 2.8% for February and March 2013.
- CPIH, the new measure of consumer price inflation including owner occupiers' housing costs, grew by 2.6% in the year to March 2013, unchanged from February. ONS currently classifies CPIH as an experimental statistic.
- The slower growth in CPIH than CPI is due principally to owner occupiers' housing costs increasing more slowly than overall inflation for other consumer goods and services in the year to March.
- The format of this bulletin changed with the publication of February data. Please see the 'Guide to Data' section of the bulletin for further information on where to find all ONS consumer price statistics including CPI, CPIH, RPI and RPIJ. If you have any comments on the new format, please email cpi@ons.gsi.gov.uk.

A brief description of Consumer Price Inflation

Consumer price inflation is the speed at which the prices of the goods and services bought by households rise or fall. Consumer price inflation is estimated by using price indices. One way to understand a price index is to think of a very large shopping basket containing all the goods and services bought by households. The price index estimates changes to the total cost of this basket. ONS consumer price indices are published monthly.

A price index can be used to measure inflation in a number of ways. The most common is to look at how the index has changed over a year. This is calculated by comparing the price index for the latest month with the same month a year ago. This is known as the 12-month inflation rate. This bulletin measures inflation to March 2013, so the 12-month rate measures changes in prices between March 2012 and March 2013.

ONS publishes a range of measures of consumer price and other price inflation. [A tale of many price indices](#) summarises information on the different measures.

This bulletin contains both National Statistics and non National Statistics. The status of each is identified in the text.

Consumer Prices Index (CPI)

What is the CPI?

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. First published in 1997 as the Harmonised Index of Consumer Prices (HICP), the CPI is the inflation measure used in the Government's target for inflation.

The CPI is also used for purposes such as uprating pensions, wages and benefits and can aid in the understanding of inflation on family budgets. For more information on the uses of the CPI see [How ONS consumer price statistics are used](#).

Latest Figure and Long-Term Trend

The CPI 12-month rate (the amount prices change over a year) between March 2012 and March 2013 stood at 2.8%. This means that a basket of goods and services that cost £100.00 in March 2012 would have cost £102.80 in March 2013.

This rate is the same as in February and is slightly higher than the 2.7% recorded for four consecutive months from October 2012 to January 2013. Looking over the longer term, the CPI 12-month rate has remained broadly level since spring 2012. This follows four years during which the rate of inflation fluctuated considerably.

Figure A below shows the CPI 12-month rate over the last ten years. Table A below shows the CPI 1-month (the amount prices change between two consecutive months) and 12-month rates and index values for the last year.

Consumer Prices Index (CPI): What are the main movements?

This section explains which goods and services had the biggest impact on the change to the 12-month rate between February and March 2013.

The change in the CPI 12-month rate can be calculated by comparing the 12-month rates for two consecutive months. An alternative, and equally valid approach, is to calculate it by comparing the price change between the latest two months and the price change between the same two months a year ago. [Explaining the contributions to change in twelve month rate](#) is a diagrammatic explanation of the calculation.

The CPI rose by 0.3% between February and March 2013, compared with a rise of 0.3% between the same two months in 2012. The 1-month movement was therefore the same in both years and this led to the CPI 12-month rate remaining at 2.8% for a second month.

Figure B below shows the contributions from each part of the CPI basket of goods and services.

The contributions to change in the CPI 12-month rate between February and March 2013 from the various detailed categories were relatively small compared with most months. The largest upward contributions to change came from price movements for:

- **recreation & culture:** prices, overall, rose by 0.5% between February and March 2013 compared with a fall of 0.1% between the same two months a year ago. Upward contributions came from photographic equipment (particularly digital cameras) and books where there were price rises this year compared with price falls a year ago. There was also an upward contribution from recording media (particularly DVDs purchased over the internet) where prices rose by more than a year ago.
- **miscellaneous goods & services:** prices, overall, rose by 0.2% compared with little change a year ago. The main upward effect came from transport insurance with car insurance premiums rising by more this year than a year earlier.

The largest downward contributions to change in the CPI 12-month rate between February and March 2013 came from price movements for:

- **furniture, household equipment & maintenance:** prices, overall, rose by 0.8% between February and March compared with a larger rise of 1.3% between the same two months in 2012. Within this group, the largest downward effect came from furniture & furnishings where prices of lounge furniture in particular rose by less than a year ago. This was partially offset by a small upward effect from household textiles.
- **transport:** prices, overall, rose by 0.6% compared with a rise of 0.8% a year ago. The downward effect came predominantly from motor fuels. Petrol prices rose by 2.2 pence per litre between February and March 2013 compared with a rise of 3.3 pence per litre between the same two months a year earlier. Diesel prices rose by 1.9 pence per litre in 2013 compared with a rise of 2.6 pence per litre a year earlier. This was partially offset by a small upward effect from transport services.
- **alcoholic beverages & tobacco:** prices, overall, fell by 0.5% compared with a rise of 0.2% a year ago. The downward effects came from spirits and beer where there were price reductions on vodka and lager in March 2013 compared with recoveries in March 2012 following sales periods.

Figure B: Contributions to the change in the CPI 12-month rate: March 2013

United Kingdom

Source: Office for National Statistics

Notes:

1. Individual contributions may not sum to the total due to rounding.
2. More information on the contents of each group can be found in table 3 at the end of the bulletin.

Other measures of Consumer Price Inflation**CPIH**

CPIH is a new measure of UK consumer price inflation that includes owner occupiers' housing costs (OOH). These are the costs associated with owning, maintaining and living in one's own home. CPIH uses an approach called rental equivalence to measure OOH. Rental equivalence uses the rent paid for an equivalent house as a proxy for the costs faced by an owner occupier. In other words this answers the question "how much would I have to pay in rent to live in a home like mine?"

for an owner occupier. OOH currently accounts for just over 12% of the expenditure weight of CPIH. This has increased gradually from a weight of 10% in 2005.

Currently, the method of calculation, the population coverage and the basket of goods and services are the same as the Consumer Prices Index (CPI), with the exception of OOH. The method of deriving the weights for CPIH and the data used for these are also the same as for CPI, with the exception of OOH. This can result in some differences from the CPI.

ONS currently classifies CPIH as an [experimental statistic](#). It is being assessed for National Statistics status by the assessment team of the UK Statistics Authority and is not currently a National Statistic. The assessment is expected to be completed by the summer of 2013. For further information on CPIH please see [Introducing the new CPIH measure of Consumer Price Inflation, 2005 to 2012](#).

In March 2013 the 12-month rate (the rate at which prices increased between March 2012 and March 2013) for CPIH stood at 2.6%, unchanged from February.

The difference between the CPI and CPIH annual rates in March 2013 was 0.2 percentage points, the same as in February. Owner occupiers' housing costs rose by 0.1% between February and March 2013, and also by 0.1% between February and March 2012. The 1-month movement was therefore the same in both years and this meant that OOH had no impact on the change in the overall CPIH 12-month rate between the two months.

Figure C below shows the CPIH and OOH component 12-month rates since January 2006 (the earliest date for which CPIH inflation can be calculated). The CPI 12-month rate has been included for comparative purposes. Table B below shows the CPIH and OOH component 1-month and 12-month rates and index numbers for the last year.

Figure C: CPI, OOH component and CPI 12-month rates since January 2006

United Kingdom

Source: Office for National Statistics

Notes:

1. The time series for this chart will be gradually increased up to a time span of ten years as more periods of data become available.
2. ONS currently classifies CPIH and OOH as experimental statistics. These are not currently National Statistics.

Retail Prices Index (RPI) and RPIJ

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

The RPI is a long-standing measure of UK inflation that has historically been used for a wide range of purposes such as the indexation of pensions and rents and index-linked gilts. For further

information on current and historic uses of the RPI please see [How ONS consumer price statistics are used](#).

RPIJ is an improved variant of the Retail Prices Index (RPI) which is calculated using formulae that meet international standards. The primary purpose of RPIJ is to enable users of the RPI to understand the impact the use of the Carli formula (which does not meet international standards) has on the RPI inflation rate.

ONS currently classifies RPIJ as an [experimental statistic](#). It is being assessed for National Statistics status by the assessment team of the UK Statistics Authority and is not currently a National Statistic. The assessment is expected to be completed by the summer of 2013. For further information on RPIJ please see [Introducing the new RPIJ measure of Consumer Price Inflation, 1997 to 2012](#).

In March 2013, the 12-month rate (the rate at which prices increased between March 2012 and March 2013) for RPIJ stood at 2.7%, up from 2.6% in February 2013. The RPI 12-month rate for March stood at 3.3%, meaning that it was 0.6 percentage points higher than it would have been had it used formulae that meet international standards.

Figure D below shows the RPI and RPIJ 12-month rates for the last ten years. Over this period the RPIJ 12-month rate has been on average 0.5 percentage points lower than the RPI. Cumulatively, inflation as measured by the RPI is 38.2% over this period, compared with 32.1% as measured by the RPIJ. The use of the Carli formula has therefore added 6.1 percentage points to the change in prices over the last ten years.

Table C shows the RPI and RPIJ 12-month rates and index numbers over the last year.

Figure D: RPI and RPIJ 12-month rates for the last ten years: March 2003 to March 2013

United Kingdom

Source: Office for National Statistics

Notes:

1. The contents of this chart fall outside the scope of National Statistics. The RPI has been de-designated as a National Statistic. ONS currently classifies RPIJ as an experimental statistic.

Background notes

1. Estimated Effect of the 2013 Budget on CPI and RPI

Budgetary measures that come into force in 2013/14 will add an estimated 0.14 percentage points to the CPI and 0.17 percentage points to the RPI. Further details are available in [Estimated Effect of the Budget on Consumer Prices Index and Retail Prices Index, 2013](#) which was published on 28 March 2013.

2. Next month

Consumer price inflation for April 2012 to April 2013 will be published on 21 May 2013.

CPI and RPI Weights

In line with usual practice the CPI and RPI weights were updated with the publication of the January and February datasets. Additional details of the update will be available from the National Statistics website in an article to be published on 26 April 2013 entitled Consumer Prices Index and Retail Prices Index: Updating Weights for 2013.

3. CPIH and RPIJ measures of consumer price inflation and the de-designation of RPI as a national statistic

Two new measures of consumer price inflation, CPIH and RPIJ, were introduced with the February dataset published on 19 March.

ONS currently classifies both CPIH and RPIJ as [experimental statistics](#). They are being assessed for National Statistics status by the assessment team of the UK Statistics Authority and are not currently National Statistics. The assessment is expected to be completed by the summer of 2013. For further information on the measures see [Introducing the new CPIH measure of Consumer Price Inflation, 2005 to 2012](#) and [Introducing the new RPIJ measure of Consumer Price Inflation, 1997 to 2012](#).

In developing her recommendations for RPIJ, the National Statistician noted that there is significant value to users in maintaining the continuity of the existing RPI's long time series, without any major change, so that it may continue to be used for long-term indexation and for index-linked gilts and bonds in line with user expectations. The UK Statistics Authority accepted this recommendation.

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

4. Methodology

The CPI, CPIH, RPIJ and RPI are compiled using the same underlying price data, based on a large and representative selection of almost 700 individual goods and services for which price movements are measured in around 150 randomly selected areas throughout the UK. Around 180,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for one year at a time.

The selection of goods and services that are priced to compile these indices is reviewed annually. The contents of the 2013 basket are described in an article [Consumer Prices Index and Retail Prices Index: the 2013 Basket of Goods and Services](#). The expenditure weights used to compile the indices are also updated each year. Additional details of the updated weights for

2012 are available from the National Statistics website in an article published on 24 April 2012 entitled [Consumer Prices Index and Retail Prices Index: Updating Weights for 2012](#). An article describing the 2013 weights will be published on 26 April 2013.

Rates of change for the CPI and CPIH are calculated from unrounded index levels, rather than from the published indices, which are rounded to one decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels for the CPI are available on request. By contrast, rates of change for the RPI and RPIJ are calculated from the published rounded indices.

5. Revisions Policy

CPI indices are revisable although the only time the CPI all items index has been revised was when the index was re-referenced to 2005=100, which took place with the publication of the January 2006 indices.

ONS currently classifies both CPIH and RPIJ as [experimental statistics](#). They currently follow revisions practices for CPI and RPI and specific policies have yet to be developed.

Once the RPI indices are published they are never revised.

6. Comparability

The CPI's coverage of goods and services was extended in stages in the areas of health, education, childcare and insurance, with effect from the January 2000, 2001 and 2002 indices. In 2000, there was also a change to the population basis for the weights which was broadened from private households to include expenditure by foreign visitors and residents of institutional households. Further details can be found in a series of articles in the [CPI methodology section](#) of the Office for National Statistics website.

The official CPI series starts in 1996 but estimates for earlier periods are available back to 1988. These estimates are broadly consistent with data from 1996 but should be treated with some caution. [Harmonised Index of Consumer Prices: Historical Estimates](#) provides more detail.

The CPIH's coverage of goods and services is currently the same as the CPI's, with the addition of a measure of owner occupiers' housing costs. A historical backseries is available back to 2005. Further details can be found in [Introducing the new CPIH measure of Consumer Price Inflation, 2005 to 2012](#).

RPI data are available back to 1947 but have been re-referenced on several occasions since then, generally accompanied by changes to the coverage and/or structure of the detailed sub-components. Details of these changes are given in Appendices 1 and 2 of the [Consumer Price Indices Technical Manual](#).

RPIJ data are available back to 1997. Further details can be found in [Introducing the new RPIJ measure of Consumer Price Inflation, 1997 to 2012](#).

7. Other measures of inflation – main uses and methodological details

Detailed explanations of the main uses and methodology used to construct the RPI and how it differs from the CPI can be found in Chapter 9 of the [Consumer Price Indices Technical Manual](#). More information on CPIH and RPIJ can be found in the articles linked above. Information on those measures will be added to the Technical Manual when it is next updated. [How ONS consumer price statistics are used](#) provides further details of how consumer price statistics are used more generally.

8. Accessibility

The most efficient way to access the latest consumer price inflation data and briefing on the ONS website is via the CPI key figure on the [homepage](#).

In response to user feedback, all consumer price inflation data are available in one location. The [Consumer Price Inflation Reference Tables \(1.22 Mb Excel sheet\)](#) are provided via an excel file.

To further help users, very detailed CPI data are now available including the [individual price quotes and item indices](#) that underpin the CPI. Please note that the data that are published are at a level which means that no individual retailer or service provider will be able to be identified. The data published covers January 1996 to December 2012. These data are updated once a quarter with around a two month lag with the latest CPI publication. For example, the data will next be updated when the May CPI is published on 18 June 2013, at which point the detailed data published will be extended to March 2013.

This bulletin includes the March 2013 data, collected on 12 March 2013. Future [publication dates \(43.6 Kb Pdf\)](#) for this statistical bulletin are available to January 2014.

Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union according to rules specified in a series of European regulations developed by the European Commission (Eurostat) in conjunction with the EU Member States. Eurostat releases figures for the Harmonised Index of Consumer Prices (HICP) for the month of March 2013 for EU Member States, together with an EU average, on 16 April 2013. A summary of the latest European data is available from [Eurostat's database tables](#). Further information on HICP for the European Union, Eurozone and other EU Member States is available from [Eurostat's HICP web page](#).

9. Further information

A more detailed [quality report](#) for this statistical bulletin is available. The report assesses consumer price inflation statistics against standard dimensions of quality such as relevance, accuracy and accessibility. The report was last updated in December 2011.

The [mini Triennial Review](#) of the CPI and RPI Central Collection of Prices is available.

A full description of how consumer price indices are compiled is given in the [Consumer Price Indices Technical Manual](#). This is supplemented by other technical articles available from the [guidance and methodology section](#) of the ONS website.

Further information on consumer price inflation statistics, including details of the methodology used to construct the indices, articles, historic data etc, is available on the [Consumer Price Indices Taxonomy page](#).

10. General

Details of the policy governing the release of new data are available from the Media Relations Office. Also available is a list of the names of those given [pre-release access \(407.3 Kb Pdf\)](#) to the contents of this release.

Follow us on [Twitter](#) or join us at [Facebook](#). View the latest podcasts on [YouTube](#).

Andrew Dilnot, Chair of the UK Statistics Authority, reported to the House of Commons Public Administration Select Committee in September 2012 that, once the current price indices work programme had concluded, the Authority would undertake a wider review of the governance arrangements and structures supporting the production of price indices to ensure that these statistics best meet user needs in the future.

The Authority will appoint an independent expert to lead this broader review, and to report to the Board of the Authority. The Authority will publish a further statement about the review shortly.

As with all National and candidate National Statistics, the new suite of inflation statistics (CPIH, its derivatives and RPIJ) will be subject to independent assessment by the Authority under the supervision of the Authority's Head of Assessment. The Board of the Authority has asked for this statutory assessment to be completed by summer 2013.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

1 Inflation rates prior to 1997 and index levels prior to 1996 are estimated. (Details are given in Economic Trends No.541 December 1998 available on the Office for National Statistics website)

2 More detailed CPI, CPIH and RPI data are available at: <http://www.ons.gov.uk>

3 ONS currently classifies both CPIH and RPIJ as experimental statistics. They are being assessed for National Statistics status and are not currently National Statistics. The assessment of these statistics is expected to be completed by the summer of 2013. For further details on experimental statistics see: <http://www.statisticsauthority.gov.uk/news/assessment-and-designation-of-experimental-statistics>

4 In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the code of Practice for Official Statistics and found not to meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>
