Incident Recording System (IRS) –
Deadlines for incident records required for
the new timetable for national statistics

Issued by:
Cath Reynolds
Head of Fire and Resilience Research and Statistics

Addressed to: Please forward to:
The Chair of the Fire and Rescue Authority
i) Fire and Rescue Service staff with responsibility for
The Chief Executive of the County Council
quality assurance of IRS incident records, and for
The Clerk to the Fire and Rescue Authority
signing off incident records as ‘published’
The Clerk to the Combined Fire and Rescue
Authority ii) Fire and Rescue Service staff responsible for data,
The Commissioner of the London Fire and
statistics and performance indicators
Emergency Planning Authority iii) Fire and Rescue Service Heads of IT
The Chief Fire Officer iv) Additionally, for Fire and Rescue Services whose
staff use their FRS’s own systems for recording
(rather than national website www.irs.fire.gov.uk),
to staff with responsibility for transmission of IRS
records to the national IRS data store.

Summary
This Circular lays out:
- the timetable to which Fire and Rescue Services are expected to supply records for the production of National Statistics
- the timetable for subsequent closure of National Statistics data bases
- information relating to National Statistics publications, National Indicators 33 and 49, and an update on the IRS Quality Assurance Guide

1.0 Introduction

1.1 Fire and Rescue Incident Statistics are classed as National Statistics and will be subject to a full assessment within the next two years by the UK Statistics Authority (http://www.statisticsauthority.gov.uk/about-the-authority/index.html), the new statutory body accountable directly to Parliament.

1.2 Much improved timeliness of national statistics is one of the key benefits on which the investment in the new fully electronic Incident Recording System was based. Improved timeliness also benefits Fire and Rescue Services, with data available for benchmarking sooner.

1.3 This Circular lays out:
- the timetable to which Fire and Rescue Services are expected to supply records for the production of National Statistics
- the timetable for subsequent closure of National Statistics data bases
- information relating to National Statistics publications, National Indicators 33 and 49, and an update on the IRS Quality Assurance Guide

2.0 Timetable for the supply of data

2.1 Under the old largely paper-based Fire Data Report system which ended in March 2009, it was possible only to publish provisional national data after nine or more months. The time elapsed to publication has decreased slightly over the past year, and will reduce to around three months after the end of each quarter.

2.2 Timeliness is fundamental to the value of data. In order to allow the prompt publication of provisional national statistics, incident records will need to be received within one month of the end of each quarter, as per table 2. Experience has shown that a further intermediate deadline midway through each quarter is required. Prompt QA and sign-off of records make queries quicker to resolve. We continue to recommend that every record should normally be recorded and quality assured within two weeks.

2.3 An extra month has been added to timetable until this Summer (2010), as per table 1.

Table 1 – Interim delivery timetable to October 2010

<table>
<thead>
<tr>
<th>Incidents during</th>
<th>To be received by</th>
</tr>
</thead>
<tbody>
<tr>
<td>September - December 2009</td>
<td>end February</td>
</tr>
<tr>
<td>January - March 2010</td>
<td>end May</td>
</tr>
<tr>
<td>April - June</td>
<td>end August</td>
</tr>
<tr>
<td>July - September</td>
<td>end October</td>
</tr>
</tbody>
</table>

Table 2 – Ongoing incident record delivery timetable from November 2010

<tr>
<td>mid August – end September</td>
<td>end October</td>
</tr>
</tbody>
</table>
2.4 Delivery will continue to be monitored actively with feedback being provided regularly to Services. Feedback on data quality will also be provided periodically.

3.0 **Closure of records**

3.1 After revisions arising from the Coroners’ Court Death Certificate matching exercise are made, all records for that financial year will be considered to be closed. The timing of Death Certificate matching exercise is expected to be 6-12 months after the end of the financial year. The timing is dependent on the outcome of discussions regarding regulations relating to access to death certificate data under the Statistics and Registration Services Act 2007.

3.2 Changes will not normally be made to the National Statistics databases and outputs after closure. It is therefore recommended that amended records are not submitted after notice of closure of National Statistics databases in order to prevent inconsistency with finalised published statistics.

4.0 **National Statistics Publications and IRS ‘CoP’ Discussion Forum**

4.2 Much improved timeliness of outputs is not the only change. The content of these publications is set to evolve further. Several new incident data tables were added to the December 2009 Monitor, as well as FRA area population statistics. In the future, further data tables will be provided in spreadsheet format, particularly for the annual Fire Statistics UK publication.

4.3 Suggestions of what further tabulations would be useful would be most welcome, preferably by adding to the discussion thread on the IRS Community of Practice (‘CoP’) web forum. This was set up to facilitate exchange of views on anything relating to the IRS using the ‘share it, solve it’ principle. It has over 190 members and is a key tool in the Review of the IRS, and for the IRS more generally. Registration is online at [www.communities.idea.gov.uk/](http://www.communities.idea.gov.uk/). For assistance, email firestatsprojectoffice@communities.gsi.gov.uk.

5.0 **National Indicators 33 and 49**

5.1 CLG is required to produce these figures, and those for 2009/10 are to be ready by the Autumn. Whereas for indicators in previous years there were processes for Fire and Rescue Services to review the data held by CLG, this no longer needs to happen because, as a result of the benefits of the nature or IRS:

   i) The databases on which Fire and Rescue Service and CLG draw should always be consistent

   ii) In addition, incident summaries and reports of the records in the national IRS database can be examined via the web access [https://www.irs.fire.gov.uk/](https://www.irs.fire.gov.uk/). This can be used by any Fire and Rescue Service whether or not staff use this system (or their FRS’s own IRS system) for entry of incident details. For a log-in, contact the IRS Helpdesk ([IRSHelp@communities.gsi.gov.uk](mailto:IRSHelp@communities.gsi.gov.uk))
Incident Recording System (IRS) – Deadlines for incident records required for the new timetable for national statistics

6.0 IRS Quality Assurance Good Practice Guide

6.1 This document was produced over summer 2009 drawing on the experience of FRS through a consultation questionnaire and follow-up conversations. The guide was circulated as a full draft to IRS contacts in FRSs on 8 October 2009 inviting comments. These are being considered and a final version circulated and place on the Communities of Practice web forum shortly.
