Energy Review Consultation: Response Form

The Consultation Process

The formal consultation period runs from 23rd January 2006 to 14th April 2006

Those wishing to respond to some or all of the issues for consultation should do so in writing before 14th April 2006. Responses are welcome through these response forms, by e-mail, or in hard-copy.

In providing your written response please let us know of any issues of confidentiality explained at page 9 in the consultation document.

All responses that are not subject to a confidentiality provision will be published on the DTI website together with a summary of the responses.

Please respond using the boxes below.

Q.1. What more could the government do on the demand or supply side to ensure that the UK’s long-term goal of reducing carbon emissions is met?
Q.2 With the UK becoming a net energy importer and with big investments to be made over the next twenty years in generating capacity and networks, what further steps, if any, should the government take to develop our market framework for delivering reliable energy supplies? In particular, we invite views on the implications of increased dependence on gas imports.

Q.3 The Energy White Paper left open the option of nuclear new build. Are there particular considerations that should apply to nuclear, as the government re-examines the issues bearing on new build, including long-term liabilities and waste management? If so, what are these, and how should the government address them?
Q.4 Are there particular considerations that should apply to carbon abatement and other low-carbon technologies.

Q.5 What further steps should be taken towards meeting the government’s goals for ensuring that every home is adequately and affordably heated?
Comments are also invited on the following issues, as described in the text.

i. The long term potential of energy efficiency measures in the transport, residential, business and public sectors, and how best to achieve that potential.

ii. Implications in the medium and long term for the transmission and network networks of significant new build in gas and electricity generation infrastructure.

iii. Opportunities for more joint working with other countries on our energy policy goals.
iv. Potential measures to help bring forward technologies to replace fossil fuels in transport and heat generation in the medium and long term.

Please note below if any of the above responses needs to be treated as CONFIDENTIAL
