Abstract:

The 2001 UK Radioactive Waste Inventory provides the fullest and most accurate information available on the volumes of radioactive waste in stock in the UK on 1 April 2001 and predicted to arise after that date.

This report is a companion to the separate main report and gives detailed information relating to wastes produced by BNFL plc at its Capenhurst, Sellafield and Springfields sites. Information included reports the waste volumes, radioactivities, radionuclide concentrations, surface radiation dose rates, the physical components of the wastes and their chemical properties, and current or planned waste treatment and packaging processes.
