How to create a High Impact Intervention

The following is a guide to be used to aid in the construction of High Impact Interventions locally.

Example one is a model and example two is an algorithm, each reflects the same process for constructing and implementing High Impact Interventions using the methodologies for improvement as described by the NHS National Institute for Innovation and Improvement’s PDSA Cycles¹ and the Institute for Health Improvement’s Care bundles².

The creation of new care High Impact Interventions can also be used in conjunction with tools for improvement, guidance and research developed by the extensive work undertaken by partner organisations³.
