

## Section 3: Risks to the station

### 3.1 Fire and smoke

*Risk - MEDIUM*

#### Station Staff Response

Member of staff informs Station Supervisor or Station Control Room that there is smoke/fire within the station boundaries.

The Station Supervisor must assess the situation and decide on a course of action.

Contact is to be made with Line Controller (who will contact the Fire Brigade), and local management.

Deploy resources as necessary until Fire Brigade or DSM/GSM arrive.

**See Reference/Working Manual Section Bf**

Only tackle the smoke/fire after the alarm has been raised, if you are sure that it is safe to do so and you will not be in any danger.

**The Station Supervisor's course of action may include full or partial evacuation of the station.**
