INFORMATION ABOUT THIS GUIDE

This edition completely replaces the 2010 version. It contains only those variables which will appear in 2011 datasets or which have been removed within the past year. Information on old LFS variables, between the years 2006 and 2010 can be found in the 2010 version of Volume 3.

Seasonal to Calendar Quarters

From 2006 the LFS has been run on CALENDAR quarters i.e. January to March, April to June, July to September, and October to December instead of seasonal quarters i.e. March to May, June to August, September to November, and December to February. This was because EuroStat require us to use calendar quarters and it will also bring us into line with other ONS household surveys. The timings of quarterly-specific questions changed as follows:

NA’s and DNA’s

Unless otherwise specified in this guide, the coding for “no answer” (NA) and “does not apply” (DNA) are -8 and -9 respectively.

Multi-Response Variables

Multiple response items are questions that can have more than one value for an individual case. This form of question is very useful when respondents are required to select a number of items from a list of possible answers.

The LFS makes use of a number of such questions. For example, ILLDAYS which asks respondents to identify on which day or days of the week they were off work due to sickness or injury. As a week contains seven days, answers to ILLDAYS are stored in one or more of seven separate variables, ILLDAYS1 to ILLDAYS7. Answers are recorded sequentially, so the first answer is held in ILLDAYS1, the second in ILLDAYS2 and so on. A code, one to seven, Monday to Sunday, is used within each variable to distinguish each day.

Some multi-response variables may be “ranked”, in a particular order. QUALS6 is an example of such a variable, where the respondent’s highest qualification is recorded in QUALS601, their second highest in QUALS602, and so on.

The structure of such variables means that users need to adjust their analysis accordingly e.g. to arrive at the total number of people sick on a Friday you would need to sum answers from ILLDAYS1 to ILLDAYS7. Some data analysis packages have multiple response tools that can assist in this.

State Pension Age Change

Between April 2010 and April 2020, women’s State pension age in the UK will increase from 60 to 65, at the rate of one month every two months. From August 2010, ONS will publish headline employment and inactivity rates based on the 16-64 population. No change was made concerning the unemployment rate, which was, and is still based on the population aged 16 and over. The LFS definition of pension age has changed from 65 plus for men and 60 plus for women to 65 plus for men and women; all children under 16 years are classified as economically inactive. Therefore, from April 2010 any routing that previously used the population ‘males 16-64 and females 16-59’ should change to ‘all those aged 16-64’, and routing that previously used the population ‘males 65+ and females 60+ (pension age)’ should change to ‘all those aged 65+’.

A detailed ‘flag’ can be calculated over the course of the incremental change to the female State pension age. This will be needed if detailed analysis concerning state pension age is intended. It is recommended
that datasets contain two ‘flag’ variables. These derived variables should be called ‘PENFLAGP’ which indicates an individual who is actually of State pension age at the time of interview and ‘NOPENFLG’ which indicates individuals who are aged 16+ and not actually of State pension age at the time of interview. ‘PENFLAGP’ and ‘NOPENFLG’ are both potentially disclosive variables as they can allow for certain respondents, affected by the change, to have their year and month of birth identified. This goes against ONS standards for End User License (EUL). Therefore these variables should not be released on EUL versions of datasets but can be included on Special License or other restricted access versions of datasets.

In order to calculate an accurate ‘flag’, datasets would need ‘age’, ‘date of birth’ and ‘reference date’ variables. ONS can provide syntax to users who wish to create these variables on their data. Please contact the LFS team in the Social Surveys Division.

Email:  

The Government announced in its October 2010 Spending Review that it will speed up the pace of State pension age equalisation for women from April 2016 so that women’s State pension age will reach 65 in November 2018. The State pension age will then increase to 66 for both men and women from December 2018 to April 2020. The current approach to recording and analysing those of State pension age will therefore need to be amended before 2016 in order to account for these further changes.

SIC2007

Implementation of Standard Industrial Classification (SIC) 2007

The industry class to which people in employment are coded in the LFS switched to SIC 2007 in January 2009. From then on, all cases were assigned an industry code on the new basis. This included respondents who had been surveyed in the previous quarter whose employment situation had not changed. There was no dual coding.

The transition to the new classification was accompanied by the implementation of a new automatic coding tool for LFS interviewers. A similar tool had been in place for the coding of occupations to the Standard Occupational Classification for several years, but prior to 2009, industry had been coded manually using a printed volume. The new tool is seen as a significant improvement in the coding of industries in the LFS. Its introduction has brought greater consistency since cases with the same description are more likely to be allocated the same code with the coding tool than with the previous approach.

LFS estimates by industry

Conversion variables have been produced for LFS microdata which map cases from the previously used industrial classification (SIC 1992) to SIC 2007 for the years 2006 to 2008 inclusive. Each industry class (4 or 5 digit code) on SIC 1992 was mapped to an industry division on SIC 2007. For pre-2006 microdata a syntax was provided to enable users to derive the mapped estimates themselves.

Users should be aware that, for the quarterly time series of employment on a SIC 2007 basis, there are several step changes at Section and Division level between Q4 2008 and Q1 2009. Investigative analysis has shown that these were caused primarily by the introduction of the new coding tool. Some limitations in the mapping between the two classifications also contributed, but to a much lesser extent.

From Q1 2009 onwards, a set of conversion variables mapping SIC 2007 to SIC 1992 have been included in the microdata. These map SIC 2007 classes to SIC 1992 divisions. Step changes at Q1 2009 are also evident when producing time series on a SIC 1992 basis.

Evaluation of the step changes

Analysis was carried out comparing the recorded and mapped SIC codes for people surveyed in both Q4 2008 and Q1 2009 who reported that they had remained in the same job (referred to as “linked records”). For those respondents who had not changed their job between the two interviews, estimates of employment for the mapped SIC 2007 codes for Q4 2008 were compared with the recorded SIC 2007 codes for Q1 2009.

The table below compares the number of cases mapped to each SIC 2007 Section in Q4 2008 with the number coded to that Section in Q1 2009. The numbers are unweighted. The percentage change in the fourth data column represents the overall effect (primarily from the new coding tool) on each industry
Section at the time the SIC 2007 was implemented. For example, the net effect on Manufacturing was a contraction of 9 per cent.

**UNWEIGHTED LINKED RECORDS:** Filter: (inecac05_OD08 >=1 & inecac05_OD08 <=3) & (iout_OD08 = 1 or iout_OD08 = 2)

Some of the main step changes at Q1 2009 when deriving time series on a SIC 2007 basis can be explained further as follows:

- Sections M and N (Professional, Scientific and Technical activities and Administrative & Support Services) gained significantly from people formerly coded to: Manufacturing; Construction; Information and Communication (J); Recreational (R); and Activities of households as employers.
- Manufacturing (Section C) has decreased in size, in particular losing people to various services within Sections M and N; and also to Distribution (G).
- Education (Section P) has gained mostly from people formerly coded to: Public Admin (O); Arts, Entertainment & Recreation (R) and Health & Social Work (Q).
- Section T (Households as Employers) reduced by 55%, losing people mostly to Admin & Support Services (Section N).

**Time series adjustments**

The percentage changes in the table above represent primarily the impact of the new coding tool. They can be used in the calculation of simple adjustments to address the step changes in time series of employment estimates on a SIC 2007 basis. This has been done for the estimates of employment by industry as published in the LFS Historical Quarterly Supplement.
SOC2010

In the development of SOC2010, there is a significant decrease in the numbers coded to the Managers and Senior Officials major group (SOC 2010 Volume 1 structure and definition). The increase in the Professional Occupations major group is likely to be the corollary of this decrease.

Ethnicity, National Identity and Religion

Changes were made to the ethnicity, national identity and religion questions in January 2011 to bring them in line with the census data collection on these topics. In April 2011, further changes were made to the ethnicity questions to bring them in line with the Scottish Census data collection.

Discurr

Discontinuity was identified in disability rates reported in the LFS between quarter four 2009 and quarter one 2010.

Analysis generally showed that the characteristics of those who were disabled (and those already in the survey who ‘became’ disabled) did not change significantly over time. The few characteristics that might have been associated with the initial increase in disability were found in subsequent quarters not to be associated with the sustained high levels of disability and were therefore thought to be random.

Examination of the survey design, questionnaire wording and routing, and anecdotal evidence from interviewers, did not reveal any significant changes over time. The only change to the administration of the questionnaire was the addition of a short introduction at the start of the disability module:

“I should now like to ask you a few questions about your health. These questions will help us estimate the number of people in the country who have health problems.”

The impact of this introduction is thought to be positive in that it prepares respondents for the set of disability questions. Any increase caused by this change should result in a more complete measure of actual disability. This change to the introduction added to the disability module in quarter one 2010 is thought to be the key driver of the step increase in disability. The earlier estimates can still be considered ‘best estimates’ for those periods and should give a robust picture of changes over time, however, direct comparisons between pre- and post-Q1-10 estimates should not be made.

- **Variable name and description.**
- **Category code**
- **Variable categories (or coding options).**
- **Period at which variable is available from for analyses**
- **Summary of what or who the variable covers (i.e. the routing). In cases where the routing is complex the full routing of the variable is shown.**
- **FREQUENCY:** Each quarter from Spring 2000
- **COVERAGE:** Applies to all
- **NOTES:** This variable is derived from SEX, MARSTT, MARCHK and LIVTOG up to SN05. From D05F this variable is derived from SEX, MARSTA, MARCHK, and LIVWTH.

AGE - Age of respondent

(0-99) Age of respondent

FREQUENCY: Each quarter from Spring 92

COVERAGE: Applies to all respondents.

NOTES: Ages over 99 are coded as 99. Text labels are not available for this variable.

The person's age at the end of the reference week is calculated by the computer at the time of the interview. If a person's birthday occurs in the month in which the interview takes place any discrepancies are resolved by checking whether their birthday falls before or after the end of the reference week. Babies under 1 year of age are coded as 0. Age is not re-asked after wave one but it is automatically updated by the laptop based on the date of birth. The one occasion checking is done is when some element of the household box was estimated at the previous wave.

NOTES: This variable is currently only available upon ONS datasets.

NATIONALITY, NATIONAL IDENTITY, COUNTRY OF BIRTH

NTNLTY - Nationality

JM07 onwards
(926) UK, British
(372) Irish Republic
(344) Hong Kong
(156) China
(997) Other

From Spring 06 to OD06
(1) UK, British
(6) Irish Republic
(36) Hong Kong
(58) China
(59) Other

FREQUENCY: Each quarter from Spring 06
COVERAGE: Applies to all respondents.
NOTES: Respondents who said that they were born outside the UK but that they are a citizen of the UK and Colonies or British by registration are coded as UK, British. When running tables filtering on NTNLTY the relevant category of NATO7 should also be filtered to ensure accuracy. From JM07 new category codes were introduced for NTNLTY.

Between Spring 1992 and Spring 2006 this variable was called NATION.

CRY01 - Country of birth

JM07 onwards
(921) England

(924) Wales
(923) Scotland
(922) Northern Ireland
(926) UK, Britain (Don’t know country)
(372) Republic of Ireland
(344) Hong Kong
(156) China
(997) Other

From Spring 01 to OD06
(1) England
(2) Wales
(3) Scotland
(4) Northern Ireland
(5) UK, Britain (Don’t know country)
(6) Republic of Ireland
(36) Hong Kong
(58) China
(59) Other

FREQUENCY: Each quarter from Spring 01

COVERAGE: Applies to all respondents.

NOTES: This question variable was introduced to record in which part of the UK the respondent was born. If the respondent does not know the part of UK they were born in, but is sure that it was the UK, code 926 is used. If ‘Ireland’ is given as an answer, the interviewer must check whether it is Northern Ireland (code 922) or the Irish Republic (code 372). The Isle of Man and the Channel Islands are not part of the UK and should be coded 997. From JM07 new category codes were introduced for CRY01.

When running tables filtering on CRY01, the relevant category of CRY07 should also be filtered to ensure accuracy.

**FREQUENCY:** Each quarter from JM07

**COVERAGE:** Applies to all respondents whose nationality is not UK, Irish Republic, Hong Kong or China (NTNLTY = 997).

**NOTES:** This variable replaces NATO. Country codes have changed and the list expanded. The variable lists all countries and also combines them under main headings. Where a respondent has a dual nationality the first one is recorded.

From JM07 an axis variable called NATOX7, has been created that combines both NTNLTY and NATO7.

**FREQUENCY:** Each quarter from JM07

**COVERAGE:** Applies to all respondents whose country of birth is not UK, Irish Republic, Hong Kong or China (CRY01 = 997).

**NOTES:** This variable replaces CRYO. Country codes have changed and the list expanded. The variable lists all countries and also combines them under main headings. Where a respondent has a dual nationality the first one is recorded.

From JM07 an axis variable called CRYOX7, was created that combined both CRY01 and CRY07.

FREQUENCY:  Each quarter from JM07

COVERAGE:  Applies to all respondents.

NOTES:  This variable replaces CRYOX. It is derived from CRY01 & CRYO. See notes in CRYO. This variable will be available in all formats. 926 UNITED KINGDOM NOT OTHERWISE SPECIFIED includes CHANNEL ISLANDS Not otherwise specified, ENGLAND, GUERNSEY, ISLE OF MAN, JERSEY, NORTHERN IRELAND, SCOTLAND, WALES and GREAT BRITAIN NOT OTHERWISE SPECIFIED

CAMEYR - Year of first arrival in the UK

(1)  Answer given as year

FREQUENCY:  Each quarter from JM08

COVERAGE:  Applies to respondents who are not born in UK, Britain (CRY01 NE 921, 924, 923, 922, 926)

NOTES:  In 2008, the word ‘first’ has been added to the question to help identify those who have settled in the UK more than once. ‘Arrival’ means for any purpose, including holiday trips. Text labels are not available for this variable. ‘Arrive’ refers to the date of arrival to take up residence. If preceded by a holiday to this country and there is no break between the holiday and staying on, the date of arrival for the holiday is included. If there is a break before taking up residence, the holiday arrival date is not included.

If the respondent takes up residence in this country, leaves the country to live elsewhere before returning to take up permanent residence again, it is the first date of arriving in this country that is required.

Anyone who arrived more than 99 years ago is coded as if it was exactly 99 years ago.

Users are advised to filter in CRYOX7 as people who said their country of birth is Ireland (pns), Channel Islands, or Isle of Man are not coded as UK/GB in the variable CRY01.

(1-12) Number for the month e.g. 1 for January, 2 for February etc

CYMU - Understand spoken Welsh

(1) Yes
(2) No

FREQUENCY: Each quarter from Spring 01

COVERAGE: Applies to all respondents in Wales.

NOTES: Only asked to Welsh respondents living in Wales, not those living elsewhere in the UK whose first language is Welsh.

When comparing the Welsh language questions to those from other sources (including the forthcoming 2001 Census results), it is important to remember that differences in sampling, mode of interview, and questionnaire design may cause differences between estimates. The Welsh language questions are preceded by questions on national identity which may cause respondents to be more inclined to say that they spoke Welsh than on another survey which had a different topic preceding the Welsh language question.

CYMS - Speak Welsh

**FREQUENCY:** Each quarter from Spring 01 until OD2010.

**COVERAGE:** Applies to all respondents. First contact only.

**NOTES:** In Spring 2001, the Labour Force Survey (LFS) introduced new questions on ethnicity in line with the recommended output classification of ethnic groups for National Statistics data sources. Further details about a respondent’s ethnic group are asked in succeeding questions, and a ‘Mixed’ group has been introduced.

The derived variable ETHCEN6 should be used in preference to ETH01 as it re-codes ‘other’ type verbatim responses giving more accurate analysis. ETH01 is the questionnaire variable.

No comparison should be made between the old and new ethnic classifications in the LFS, because not only are the categories different but, the questions and coding of answers underlying the data are also very different. The results for this variable do not take into account the answers to the succeeding questions, but these are included in the variables ETHCEN6 and ETHCEN15.

Ethnic questions are concerned with descent rather than country of birth.

This variable is replaced by ETH11 from JM11.

Ethcen15 is a detailed classificatory variable based on answers contained at the questions Eth01, EthWh, EthMx, EthAs and EthBl.

Please note that respondents in Northern Ireland who state that their ethnicity is white are not asked the detailed level question EthWh. They are therefore listed as missing, ‘not applicable – white Northern Irish’ in Ethcen15.

NOTES: From Spring 2001, the Labour Force Survey (LFS) introduced new questions on ethnicity in line with the recommended output classification of ethnic groups for National Statistics data sources.

ETHCEN6 and ETHCEN15 are the new variables covering Ethnic origin. They are fully in line with the Census definitions of ethnicity. ETHCEN15 is a detailed ethnic classificatory variable based on answers contained at the questions Eth01, EthWh, EthMx, EthAs and EthBl. Data in this variable has had ‘other’ type verbatim responses coded and re-allocated to the appropriate category.

Please note that respondents in Northern Ireland who state that their ethnicity is white are not asked the detailed level question EthWh. They are therefore listed as missing, ‘not applicable – white Northern Irish’ in ETHCEN15.

No comparison should be made between the old and new ethnic classifications in the LFS, because not only are the categories different but, the questions and coding of answers underlying the data are also very different.

ETHCEN6 - Ethnicity revised

(2) Mixed
(3) Asian or Asian British
(4) Black or Black British
(5) Chinese
(6) Other ethnic group

FREQUENCY: Each quarter from Spring 01 until AJ11.

COVERAGE: Applies to all respondents.

NOTES: From Spring 2001, the Labour Force Survey (LFS) introduced new questions on ethnicity in line with the recommended output classification of ethnic groups for National Statistics data sources. ETHCEN6 and ETHCEN15 are the new variables covering Ethnic origin. They are fully in line with the Census definitions of ethnicity. The new classification has two levels. Level 1 (ETHCEN6) is a broad classification into 5 main ethnic groups. Level 2 (ETHCEN15) nests within Level 1 and provides a finer classification.

With the introduction of these new ethnicity questions, some data in Spring 2001 had to be imputed for missing cases. See Volume 1 (Background & Methodology) “Imputation in the LFS" for further details. Data in this variable has also had ‘other’ type verbatim responses coded and re-allocated to the appropriate category.

No comparison should be made between the old and new ethnic classifications in the LFS, because not only are the categories different but, the questions and coding of answers underlying the data are also very different.

NOTES: This variable replaces GOR. It was renamed due to the re-ordering of categories. From Spring 2000 it is derived from UALAD99, prior to this, it was derived from COUNTY (which has been removed from all datasets). Merseyside is generally included in the North West region in published data.

LOCAL GOVERNMENT REORGANISATION IN APRIL 2009

In April 2009, there was a reorganisation of local government that created nine new unitary authorities (UAs). Five of these UAs were created from existing county councils and their district councils. The remaining four were created by splitting Cheshire and Bedfordshire into two - each along existing district council boundaries. All nine unitary authorities will, therefore, be aggregates of existing local authorities.

(Note: Isles of Scilly also changes from 15UH to 00HF at this time)

Currently these variables are produced on the LFS using UA/LAD data:
UALA, UACNTY, UALADGB, UALD3, UALDO, UALDWK, UALDWK2 (UALD3 is only on ONS datasets)

To apply these changes to back data syntax can be used to recode the above variables into new variables representing these new classifications. This syntax can be obtained by contacting the UK Data Archive. This syntax will need to be used for all files up to AJ10 data. From AJ10 data onwards we will be producing quarterly datasets with the new UA variables on them.

PLEASE NOTE: The LFS data will be weighted based on the old UALAD codes until population estimates are provided on the new UALAD basis, this change is likely to occur in JM12. Once this change occurs only the new UALAD variables will be provided and the old codes will no longer be produced for the data. When this change occurs details will be published in the User Guide.

RESTME - Length of time at this address

(1) Less than 12 months
(2) 12 months but less than 2 years
(3) 2 years but less than 3 years
(4) 3 years but less than 5 years
(5) 5 years but less than 10 years
(6) 10 years or longer

FREQUENCY: Each quarter from Spring 96
COVERAGE: Applies to all respondents.
NOTES: This variable which replaces RESLNO is a result of the GSS Social Survey Harmonisation Project.

The question relates to address rather than place. It may be possible that an individual is living at a different address from 12 months ago but is living in the same town and county.

Babies under a year are code 1.

ALL students living in Halls of Residence should be given the same code as the ‘head of household’.

This question must be asked of economically inactive respondents aged 70 and over.

Absences from the address which by their nature are temporary, i.e. without permanent intent are ignored. For example, a person now ages 22 who was born at this address, and whose only absence was when he went to university for three years at the age of 18 is recorded as having lived at the address for 22 years - code 6 ‘10 years or longer’.

RESMTH - Months at this address

(0 - 11) Months

FREQUENCY: Each quarter from Spring 96
COVERAGE: Applies to all respondents who have lived at their address less than 12 months (RESTME = 1).
NOTES: RESMTH and RESBBY are used to identify babies born less than 3 months ago (i.e. between survey waves).

RESBBY - Whether respondent is baby

(1) Yes
(2) No

FREQUENCY: Each quarter from Spring 96
COVERAGE: Applies to all respondents who have lived at their address less than 3 months (RESMTH <3).
NOTES: RESMTH and RESBBY are used to identify babies born less than 3 months ago (i.e. between survey waves).

**FREQUENCY:** Each quarter from Spring 92 to Winter 95. Spring quarters only from Spring 96

**COVERAGE:** Spring quarters only Spring 92 - Spring 94: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Non Spring quarters Summer 92 - Winter 94: Applies to all respondents who have lived at their address less than 3 months (RESLEN = 2).

Each quarter from Spring 95 - Winter 95: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Each quarter from Spring 96 onwards: Applies to all respondents who have lived at their address less than 3 months AND they are not a baby born within the last 3 months (RESMTH < 3 AND RESBBY ≠ 1).

**NOTES:** If filtering on a specific country other than the UK then the relevant category of M3CRYO should also be filtered on. RESMTH and RESBBY were introduced in Spring 96 to identify babies born less than 3 months ago (i.e. between survey waves).

Residence in England (921), Wales (924), Scotland (923), Northern Ireland (922), Jersey (832) and the Isle of Man (833) should all be coded to UK (1).

increased to 116, from Spring 98 to 135 and from Spring 99 to 144, this is for SOEC purposes as a
number of countries were not uniquely identifiable. *Note the change in coding for At sea/in the air and

**FREQUENCY:** Spring 92 only. Each quarter from Spring 93 to Autumn 99. Spring quarters only from Spring 2000

OYEQM3 - Whether living at same address 12 months ago

(1) Yes, same place
(2) No, somewhere else
(3) Baby under 1 year

FREQUENCY: Spring quarters only from Spring 92

COVERAGE: From Spring 92 to Spring 95: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Each quarter from Spring 96 onwards: Applies to all respondents who have lived at their address less than 3 months AND they are not a baby born within the last 3 months (RESMTH < 3 AND RESBBY ≠ 1).

NOTES: Although the coverage of this variable seems contradictory at first glance it is in fact referring to the address the respondent was living at prior to their current address. For example, if the respondent is currently living in Bristol but three months ago was living in Bognor this variable checks whether the respondent was living in Bognor 12 months ago.

It should also be noted that the same circumstances apply if the respondent is living at a different address from 12 months ago but is still living in the same town or county.

RESPONSE DETAILS

CAIND - Child/Adult indicator

(1) Adult
(2) Child of head of household and head of family unit
(3) Child of other family
(4) Child of head of household but not head of family unit

FREQUENCY: Each quarter from Spring 92
COVERAGE: Applies to all respondents.
NOTES: This variable is derived from AGE, MARSTA, EDAGE, COURSE, RELHFU & RELHRP.
CAIND identifies dependent children, i.e. aged <16 or aged 16 – 18 in full-time education and never married.

IOUTCOME - Individual outcome

(1) Personal response
(2) Proxy response
(3) Non-response
(4) Child
(6) Data brought forward from previous quarter
(7) Economically inactive 70+

FREQUENCY: Each quarter from Spring 92
COVERAGE: Applies to all respondents.
NOTES: This variable is used mainly to identify whether responses obtained were given personally or by proxy. Some analysis of LFS data may be particularly affected by proxy responses, e.g. subjective questions - whether someone would like to work, or questions that are particularly difficult for proxy respondents to answer, e.g. number of actual unpaid overtime hours worked in reference week. Results of this variable therefore should be treated with caution. With regard to proxy responses there are some common sense rules. A study of proxy responses is contained in the LFS User Guide Volume 1 (Background and Methodology). Generally the questions can be asked of the main respondent provided that they are able to supply the required information and are related to the individual concerned. However, it is also acceptable for:

a) Co-habitees to supply information about each other,
b) Anyone whom the HOH/spouse personally asks to provide the information, e.g. a young person whose parents wish them to be the respondent,
c) A relative, friend or health visitor may also give information where a person living alone is too old, sick or deaf to be interviewed, but only with their permission and preferably in their presence, and
d) Children to be used as an interpreter if the parents do not speak English and it is felt that the child is capable of understanding and interpreting the questions.

PRXREL - Type of proxy response

(1) Personal response
(2) Spouse/partner proxy
(3) Other proxy
(4) Child aged under16

FREQUENCY: Each quarter from Spring 97
COVERAGE: Applies to all respondents.

FAMILY CHARACTERISTICS

OVERESTIMATING SAME-SEX COUPLES

Prior to 2006, same-sex cohabiting couples were grouped together under a single family type (FUTYPE=3). Following the introduction of legal same-sex civil partnerships in December 2005, the variable FUTYPE6 was introduced in LFS/APS. This variable included the following ‘new’ family types:

- Same sex cohabiting couple, no children
- Same sex cohabiting couple, non-dependent children
- Same sex cohabiting couple, dependent children
- Civil Partners with no children
- Civil Partners, non-dependent children only
- Civil Partners with dependent children

From 2006 onwards it is, therefore, possible to identify both civil partner couple families and same-sex cohabiting couple families. Estimates of civil partner couple families can be derived in the same way as other family types by using the relationship to head of family (RELHFU) for analysis and counting only the heads of families (RELHFU=1). However, estimates of same-sex couple families cannot use this standard method.

Adults in same-sex couple families were historically treated as separate benefit units, and when civil partnerships were introduced, same-sex cohabiting couples continued to be treated in this way by LFS & APS. As such, both partners in a same-sex cohabiting couple are treated as being in different families. This means that for both members RELHFU=1 (i.e. both members are heads of a family). Any analysis that uses RELHFU=1 to estimate the number of families will therefore double the number of same-sex cohabiting couples. This is currently true for all LFS and APS household datasets.

In order to obtain accurate estimates of the number of families including same-sex cohabiting couples, it is best to separately identify all same-sex family types and include RELHFU in the analysis (same-sex family types are those where FUTYPE6 = 3, 14, 15, or 16). It is then possible to half the number of adults in same-sex cohabiting couples (i.e. excluding any children in same-sex couple families), to give the number of same-sex cohabiting couples. Of course, any analysis of ‘people’ in same-sex couples (adults, children or both) will not require the total to be halved.

From JM10 onwards this approach will not be required because the code used to derive RELHFU has been corrected to account for adults in same-sex couples. From JM10 onwards the standard method can be used. It is recommended to check each dataset, and the above approach will continue to be required for datasets from 2006 and 2009.

To summarise, from JM10 RELHFU is derived more accurately, which will impact FUTYPE6 and family unit analysis. Data from 2006 through to 2009 must be adjusted when looking at same-sex cohabiting couples.

FREQUENCY: Spring and Autumn quarters from Spring 06 (on household datasets only). Each quarter from Spring 2006 (on household and ONS datasets)  
COVERAGE: Applies to all family units.  
NOTES: Between Spring 1996 and Spring 2006 this variable was called FUTYPE. This variable is derived from SEX, RELHFU, MARSTA, LIVWTH & FDPCH19.

EXTFU - Extended family unit

(1-17) Extended family unit number  

FREQUENCY: Each quarter from Spring 96  
COVERAGE: Applies to all households.  
NOTES: This variable identifies where distinct family units are related with one another. A missing value (-10) at this variable represents an individual who is not related to anyone else in the household. Respondents belonging to the same extended family unit will share the same valid response value. This variable is derived from XR(00-15), TOTFU, SMSXFU & FAMUNIT.

SMSXFU - Same sex family unit

(1-11) Family unit number  

FREQUENCY: Each quarter from Spring 96  
COVERAGE: Applies to all family units.  
NOTES: This variable redefines the family unit to include same sex partners in the same family unit. Thus, using this variable results in fewer family units in total than if using FAMUNIT. The family hierarchical structure is based on FAMUNIT. Those people who have been coded as same sex co-habitees are put into separate family units at FAMUNIT. Therefore when any analysis is done of same sex co-habitees at family level, it shows the number of individuals rather than couples.
This variable is derived from LIVTOG / LIVWTH & XR(00-15).

**FAMUNIT - Family unit number**

- **FREQUENCY:** Each quarter from Spring 92
- **COVERAGE:** Applies to all respondents.
- **NOTES:** With the introduction of XR(00-15) from Spring 96, FAMUNIT (unique identifier for family unit) is now generated automatically. Previously, it was coded by the interviewer to identify the family groupings within the household.

**RELHFU - Relationship to head of family**

- **FREQUENCY:** Each quarter from Spring 92
- **COVERAGE:** Applies to all respondents.
- **NOTES:** This variable was derived from MARCON & SEX up to Winter 94. From Spring 95 it is derived from MARSTT / MARSTA, LIVTOG / LIVWTH & SEX.

(0-10) Number of dependent children in family aged under 19

FREQUENCY: Spring quarters only from Spring 92 to Spring 94. Each quarter from Spring 95

COVERAGE: Applies to all family units.

NOTES: This variable should be used at the family level or at the person level selecting on heads and wives of heads of families and are derived from CAIND & AGE. Dependent children are all those aged 0-15 and those aged 16-18 who are in full-time education. Dependency of a child is a family concept. If this variable is run at a household level it is not certain on whom the child is dependent. By running this variable at the family level or at the person level selecting on heads and wives of heads of family units (both of whom the child is dependent on) there is no chance of making claims of dependency where none in fact exist.

(4) Under 16

FREQUENCY: Each quarter from Autumn 93

COVERAGE: Applies to all respondents.

NOTES: With the removal of the Census Matrix Edit ILODEFR supersedes the variable ILODEFA. This variable is derived from AGE & INECAC05.

The variable INECACR is replaced by INECAC05 in the derivation of this variable from Spring 05 onwards.

This variable amalgamates the main headings of INECAC05.

From Spring 96, when analysing economic activity at family unit or household level, INECACR should be used because ILODEFR does not have a DNA category.

The ILO unemployment rate is ILO unemployed as a percentage of the economically active.

AECACTR - Economic activity (reported)

(1) Employee
(2) Self Employed
(3) Government employment and training programmes
(4) Unpaid family worker
(5) ILO unemployed

(8) Economically inactive - neither wanting nor seeking work
(-9) DNA Children under 16

FREQUENCY: Every year from 2000

COVERAGE: Applies to all respondents.

NOTES: With the removal of the Census Matrix Edit AECACTR supersedes the variable AECACT. This variable is included only on annual local area datasets, which are available only to ONS and those government departments which sponsor the local area enhancements. This variable is derived from INECACR.

FREQUENCY: Each quarter from JM08.

COVERAGE: Applies to all respondents of working age in the UK.

NOTES: This variable replaces SCHM04 due to change in response categories.

On government schemes there are elements of both work experience with an employer and training. In general, persons on Employment schemes spend most of their time with an employer, while those on Training Courses spend most of their time at a College of Further Education or ‘Training Centre’.

(8) Flexible New Deal
(9) None of the above

FREQUENCY: Each quarter from JM 2010.

3. Some other scheme

FREQUENCY: Each quarter from Spring 04

COVERAGE: Applies to all respondents on any other kind of government training scheme in GB only (SCHM08 = 50).

NOTES: This variable replaces TECLEC. Training & Enterprise Councils (TECs) no longer exist and have been replaced by Learning Skills Councils who 'fund' programmes rather than run them.

YTETMP - YT, ET, TEC schemes

1. With an employer providing work experience or practical training
2. On a project providing work experience or practical training (GB only)
3. College or training centre
4. Temporarily away from an employer or project

NOTES: If the respondent was both with an employer or on a project and at college or training centre in the reference week then they were coded as 'With an employer providing work experience or practical training' or 'On a project providing work experience or practical training' as appropriate. However, if the respondent spent most of the year with an employer but happened to spend all the reference week on block release at a college then they would have been coded as at 'College or Training Centre'. Northern Ireland schemes are applicable to Spring quarters only from Spring 92 – 94, and in all quarters from Winter 94.

YTETJB - Whether had paid job in addition to scheme

1. Yes
2. No

FREQUENCY: Each quarter from Spring 92

COVERAGE: Applies to all men aged 16-64 and women aged 16-59 (- 62 from Spring 94) on a government scheme or at college or at a training centre.

NOTES: Respondents with a paid job in addition to a place on a scheme are included in the 'Government employment & training programmes' category of economic activity, not as employees or self-employed.

NI schemes are applicable to Spring quarters only from Spring 92-94, and in all quarters from Winter 94.

PRIVATE OR PUBLIC SECTOR

For this survey, the public sector is defined as that owned, funded or run by central or local government, and the ‘private’ sector as everything else. The private sector includes:
- Public limited companies (PLC), companies that are quoted on the stock market and have shareholders.
- Limited companies (Ltd). Small businesses often owned by one or more individuals. These may also be referred to as private limited companies.
- Self-employed individuals; sole traders, or owners of small shops or businesses.
- Charities, private trusts, housing associations or other voluntary organisations.
- Trade Unions (employees of).

Some respondents may not know whether their industry is in the ‘public’ or ‘private’ sector and, for certain types of activity, there may be no clear answer. The following guidelines are used to help sort out some common confusions.

Schools, depending on the type, may fall into one of several categories. For example:
- a local authority school SECTRO03 coded 4 at
- an 'opted-out school' SECTRO03 coded 5 (a FE college is also 5)
- a private school SECTRO03 coded 7

Most private schools (including so-called ‘public schools’) are charities.

Private contractors SECTOR coded 1 (this applies even if they work exclusively for the public sector, e.g. a cleaning firm, catering firm or freelance consultant working for a government department or local authority).

Self-employed individuals SECTOR coded 1
Sole traders SECTOR coded 1
Businesses owned by an individual SECTOR coded 1

Doctors and dentists (and others working in their practices) are coded according to whether the practice is mainly NHS or private. (GPs are technically self-employed even when they work exclusively for the NHS but, for the purpose of this question, they are to be treated as working for the NHS if that is what they mainly do). This means:
- mainly private work SECTOR coded 1
mainly NHS work
Private Hospital
Churches
Charities
Trade Unions
Government funded bodies and agencies

SECTOR coded 2 and SECTRO03 coded 6 'Health authority or NHS Trust'
SECTOR coded 1
SECTRO03 coded 9 'some other kind of organisation'.
SECTRO03 coded 7
SECTRO03 coded 7
SECTRO03 coded 3 'central government, civil service'.

This includes the Benefits Agency, the Employment Service, Research Councils, the British Council, National Museums and Art Galleries, and prisons.

Armed forces were previously coded with 'central government, civil service'. From Spring 03 they have their own code ‘SECTRO03 coded 8’.

Public bodies with a greater

degree of autonomy than the above

SECTRO03 coded 2 'a nationalised industry or state corporation'. This includes Post Office, Royal Mint, British Rail, BBC, Audit Commission, Equal Opportunities Commission, Civil Aviation Authority

A private firm
Deregulated bus service
London Regional Transport and -
municipal bus companies are public corporations
Magistrates Courts
Probation Service
Training and Enterprise Councils (TECs)
and Local Enterprise Councils (LECs)

SECTOR coded 1
SECTRO03 coded 2

SECTRO03 coded 4 'local government or council'.
SECTRO03 coded 4 'local government or council'
SECTOR coded 1 'private firm or business'

9. Other kind of organisation

FREQUENCY: Each quarter from Spring 03

COVERAGE: Applies to all respondents who don’t work for a private firm or business or a limited company (SECTOR = 2).

NOTES: This variable replaces SECTRO.

This variable expands on ‘Other kind of organisation’ from SECTOR. It is one of the variables used to create a split between public & private sector employment (see PUBLIC). The aim is to get a split between the public & private sector, not necessarily an accurate split between each category listed. A small number of self-employed respondents get classified into categories of SECTRO03 which are public sector. However, they are classified correctly in PUBLIC as private sector.

‘Codes 1 & 7 = Private and 2 to 6 & 8 & 9 = Public’.

ONS are interested in a more comprehensive measure of armed forces employees than provided by SOC2000. Hence, the answer category ‘Armed forces’, previously along with ‘central government and the civil service’ now appears as a separate category.

LFS User Guide Volume 5 (LFS Classifications) gives a complete breakdown of occupation codes.

The SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

Please see categories at NSECMMJ above

FREQUENCY: Each quarter from Spring 01 until OD10.

COVERAGE: Applies to all respondents aged 16+.

NOTES: The National Statistics Socio-Economic Classification (NS-SEC) is an occupationally based classification designed to categorise the whole adult population. It replaces Social Class based on Occupation (SC, formerly Registrar General's Social Class) and Socio-Economic Groups (SEG). The information required to create the NS-SEC is occupation coded to the unit groups (OUG) of the Standard Occupational Classification 2000 (SOC2000) and details of employment status (whether an employer, self-employed or employee; whether a supervisor; number of employees at the workplace). The fourteen functional and three residual operational categories of NSECMMJ can be nested into the eight analytic categories of NS-SEC. The three residual categories 15, 16 and 17 are excluded in some other surveys and therefore LFS NS-SEC major group 8 may not be comparable with the same group derived by other surveys. For more information on the NS-SEC go to www.statistics.gov.uk.

This variable was replaced by NSECMMJ10.

FREQUENCY: Each quarter from Spring 01 until OD10.

COVERAGE: Applies to all respondents aged 16+.

NOTES: The fourteen functional and three residual operational categories of NSECM can be nested into the eight analytic categories of NSECMMJ. LFS derivation of major groups allocates NS-SEC categories 14 to 17 to NSECMMJ 8. The three residual categories 15, 16 and 17 are excluded in some other surveys and therefore LFS NS-SEC major group 8 may not be comparable with the same group derived by other surveys. For more information on the NS-SEC go to www.statistics.gov.uk

This variable is derived from REDUND, INECAC05, REDIND, INDS92L, INDSECT & RDIC92. The variable INECACR is replaced by INECAC05 in the derivation of this variable from Spring 05 onwards.

For a small number of people - who were made redundant in the three months prior to interview, had been in employment again since then, but were not in employment at the time of interview - it is assumed that the industry they were made redundant from is the same as the industry in their most recent job.

If analysing data on redundancies made in the last three months, you should also filter on the variable REDUND = 1 (made redundant).

LFS User Guide Volume 5 (LFS Classifications) gives a full breakdown of occupation codes.

The new SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

HOURS

Structure of LFS hours variables - hours worked per week

When conducting analysis of hours worked there are three elements to consider:

i) whether to use usual or actual hours worked;

ii) whether to include or exclude paid and unpaid overtime;

iii) whether to include hours worked in second jobs.

The table below shows which LFS variables are available to provide this information. Second job information is only available for actual hours including overtime. In general it is recommended that the derived variables are used because these include all respondents. The derived variables TOTHRS and SUMHRS both measure total hours worked in main and second jobs, but are derived in different ways and give slightly different results. SUMHRS is available from Spring 1995 onwards and should be used in preference to TOTHRS.

This could involve being either "called out" or "laid off" because of a labour dispute in the respondents own workplace.

Laid off/short time/work interrupted by economic and other causes - applies to respondents who were not working for technical or economic reasons: e.g. shortage of orders (economic reason) or because production at their workplace was impeded by a shortage of material supplies (e.g. caused by a labour dispute outside the respondents workplace or at another firm halting supplies). SHFTWK99 - Whether shift work done in respondents main job

(1) Most of the time  
(2) Occasionally  
(3) Never

FREQUENCY: AJ quarters only from Spring 99  
COVERAGE: Applies to all respondents in employment excluding college based government schemes.  
NOTES: This variable replaced SHFTWK. The wording of the response categories has been altered in order to obtain better quality data.
SHFTYP - Type of shift pattern

1. Three-shift working
2. Continental shifts
3. Two-shift system with "earlies" and "lates"/double day shifts
4. Sometimes night and sometimes day shifts
5. Split shifts
6. Morning shifts
7. Evening or twilight shifts
8. Night shifts
9. Weekend shifts
10. Other type of shift work

FREQUENCY: AJ quarters only from Spring 92

COVERAGE: Applies to all respondents in employment who may do shift work (SHFTWK99 = 1 or 2).

NOTES: The shift work categories are defined below:

Three-shift working - the day is divided into three working periods - morning, afternoon and night. This kind of shiftwork usually, but not always, involves one or more weeks of mornings, followed by one or more weeks of afternoons, followed by one or more weeks of nights.

Continental shifts - this is a continuous three-shift system that rotates rapidly e.g. three mornings, then two afternoons, then two nights. Usually there is a break between shift changes.

Two-shift system with earlies and lates or double day shifts - normally two shifts of eight hours each, e.g. 0600-1400 and 1400-2200. Shifts are usually alternated weekly or over longer intervals.

Split shifts - these are full shifts divided into two distinct parts with a gap of several hours in between. Used in industries where peak demands are met at different times of the day e.g. catering, passenger transport and service industries.

Morning shift - if this is full-time, most commonly 0600-1400. This code is used if the morning shift is the only shift worked or worked part time during the morning.

Evening shift - if this is full-time, most commonly 1500-2400. Also used for a part-time shift 1700-2100 or 1800-2200. Part-time evening shifts are usually called twilight shifts.

Night shift - if this is full-time, most commonly 1800-0600, and usually continuing after midnight. This code is used only for permanent night work.

Weekend shift - this code is used for work during Fridays, Saturdays, Sundays (0600-1800), when there is no other work.

Other type of shift work - this code is only used when none of the above apply.

FLED10 - Type of agreed work arrangement

1. Flexible working hours (Flexitime)
2. Annualised hours contract
3. Term time working
4. Job sharing
5. Nine day fortnight
6. Four and a half day week
7. Zero hours contract
8. On-Call Working
9. None of these
10. Don't know

FREQUENCY: Spring and Autumn quarters only from Spring 2010.

COVERAGE: Applies to all respondents in employment, excluding those on college-based schemes.

NOTES: This variable is derived from FLEX10. The categories are defined as below:
This variable replaced FLED9D in 2010.

**Flexible working hours** - Employees can vary their daily start and finish times each day. Over an accounting period (usually four weeks or a calendar month) debit and credit hours can be carried over into another accounting period. Variable start and finish times on their own are not enough for a flexitime system. There must also be a formal accounting period.

**Annualised hours contract** - The number of hours an employee has to work are calculated over a full year. Instead of say, 40 hours per week, employees are contracted to say 1900 hours per year (after allowing for leave and other entitlements). Longer hours are worked over certain parts of the year and shorter hours at other periods. Variations in hours are related to seasonal factors or fluctuation in demand for the companies goods or services.

**Term time working** - Respondents’ work during the school or college term. Unpaid leave is taken during the school holidays, although their pay may be spread equally over the year.

**Job sharing** - This is a type of part time working. A full-time job is divided between, usually, two people. The job sharers work at different times, although their may be a changeover period.

Both nine day fortnights and four and a half day weeks working arrangements involve the 5 day working week being compressed into fewer full days. Such arrangements refer to full-time working only.

**Nine day fortnight** - involves individual employees having one day off every other week. The actual day off may vary so long as the employee keeps to an alternating pattern of one 5 day week followed by one 4 day week.

**Four and a half day week** - Typically involves the normal working week finishing early on Fridays. The short day need not necessarily be Friday, but this is the most obvious and common day.

**Zero hours contract** - is where a person is not contracted to work a set number of hours, and is only paid for the number of hours that they actually work.

In most cases a respondent who works any of these particular type of shift patterns will recognise the term and will require no further explanation. Where a respondent asks what is meant by the term it is unlikely they work such shift patterns and are generally coded as (8) or (9).

FLEX10(1-3) - Type of agreed work arrangement

- From Autumn 96 onwards (FLEX9D)
  1. Flexitime (Flexible working hours)
  2. Annualised hours contract
  3. Term-time working
  4. Job sharing
  5. Nine-day fortnight
  6. Four-and-a-half day week
  7. Zero hours contract
  8. On-call working
  9. None of these

**FREQUENCY:** AJ and OD quarters only from 2010.

**COVERAGE:** Applies to all respondents in employment excluding those on college based schemes.

**NOTES:** This variable replaced FLEX9D(1-3) in 2010, which, in turn, replaced NINDAY which was discontinued from 1993. Respondents may give up to three responses. Prior to Spring 97 this variable was coded FLEX9D(0-2). Option 9 ‘Don’t know’ has been removed from Spring 04.

See FLED10 for definitions of the individual categories.

LSSOTH - Time off flexi or annual

- 1. Yes
- 2. No

**FREQUENCY:** Spring only in 2000. AJ quarters only from Spring 03
COVERAGE: Applies to all respondents who give a reason for working less hours and they work either flexi-time or annualised hours (YLESS = 1, 4, 12 or 13 AND FLEX10 = 1 or 2).

NOTES: This variable relates to reasons for the respondent not having worked in the reference week, although they have a job.

FLEXW1 - Whether respondent works flexi-time

(1) Yes
(2) No

FREQUENCY: Spring and Autumn quarters only from Spring 2000

This ensures that both GB and NI trade union/staff association data are standard on an Autumn quarter only basis from Autumn 95.

In Autumn 97, incorrect routing of Northern Ireland respondents meant that only those who answered yes to TUPRES were asked UNION. Therefore, there was under-response of unknown size to UNION. Those who should have been asked UNION but were not have been coded 9 ‘Not answered’ (1,350 cases).

(2) No

The new SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

COVERAGE: Applies to all respondents in employment with a regular additional job.

NOTES: With the removal of the Census Matrix Edit MPNSR02 supersedes the variables MPNES02 & MPNSS02.

MPNSR02 is the number of employees in second job as reported. This variable is derived from STAT2 & SOLO2.

This variable records the total number of employees at the respondent’s workplace, not just the number employed within the particular section/department he/she works in.

SOLO2 - Working alone or employees in second job (reported)

(1) Alone or with partner(s) but not employee
(2) With employees

FREQUENCY: Each quarter from Spring 92

COVERAGE: Applies to all respondents who are self-employed and who have a regular additional job (STAT2 = 2).

NOTES: From Spring 92 to Winter 00, this variable was called NSOLO2. NSOLO2 was processed through the Census Matrix Edit which checks the respondents occupation and their employment status for inconsistencies. With the removal of the edit, SOLO2 supersedes the variable NSOLO2.

Self-employed people who use only other self-employed people in the business they run (e.g. builders) are coded 1.

JOBTYP2 - Permanency of second job

(1) Permanent
(2) Some way not permanent

FREQUENCY: Each quarter from Spring 01

COVERAGE: Applies to all respondents who have a regular additional job and didn’t change jobs during the reference week (SECJOB = 1 AND Y2JOB = 2).

NOTES: Permanency relates to the job itself rather than to the individual who does the job. Someone who is being made redundant, retiring, going on maternity leave, or taking up another job may not regard their job as permanent, but they are still coded as 1 (permanent job). Respondents who have short-term contracts are coded according to whether they consider their job to be of a permanent nature.

JB2T10 - Way in which 2nd job was not permanent

(1) Working for an employment agency
(2) Casual type of work
(3) Seasonal work
(4) Under contract for a fixed period or fixed task
(5) Some other reason for not being permanent

FREQUENCY: Each quarter from JM 2010.

COVERAGE: Applies to all respondents who said their second job was not permanent in some way (JOBTYP2 = 2).
NOTES: Those who regard their job as not permanent are asked to specify in what way it is not permanent. If, at this stage, the respondent volunteers an answer relating to his or her personal circumstances e.g. retired, the interviewer is asked to return to JOBTYP and stress the first clause again. This variable replaced JOBTMP2 in JM 2010.

From JM11, this variable became multi-coded allowing respondents the opportunity to code five possible options.

The new SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

The questions contained within the Benefits Section are updated regularly to reflect any new benefits that have been introduced. It is felt that any discontinuity resultant from any question changes is more than compensated for by the increased depth and accuracy of the data now provided.

Comparison between the data collected by the LFS and administrative data collected by other Government departments shows that the LFS consistently undercounts benefit claimants.

The new SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

EDUCATION AND TRAINING

As part of the wider ‘Education and Training Review’, the LFS education section has been subject to various workshops, user consultation and testing over the past 18 months with the aim of redeveloping the education section and improving data collection. BIS commissioned the National Centre for Social Research (NatCen) to conduct some testing and the results from this work fed into the annual testing conducted by ONS in a cognitive interviewing exercise and a full dress rehearsal.

The 2011 Dress Rehearsal sees the inclusion of a revised education and qualifications section. The new section has been ordered chronologically and will broadly cover:

- Qualification gained from outside the UK
- Qualifications gained from school or home schooling
- Qualifications gained from college or university
- Qualifications gained from work
- Qualifications gained from a government scheme
- Qualifications gained in some other way
- Qualifications that the respondent is currently working towards

A new Qualifications and Credits Framework (QCF) was introduced in late 2008. The QCF is replacing all existing vocational qualifications with re-named qualifications. QCF qualification titles are branded only in terms of Level (level 1-8) and Size (award, certificate, diploma) of achievement, as well as the subject. There is no mention of the QCF. However, some qualification titles may make reference to the previous branding (e.g. BTEC, NVQ, City and Guilds, etc). Education questions have been changed to allow these new qualifications to be recorded.

Degree qualifications: First degrees including Bachelor of Arts (BA) and Bachelor of Science (BSc). Some first degrees are awarded with honours and classified as first class, second class etc. These remain as first degrees and should not be confused with higher degrees (MAs, PhDs etc.). However, MAs from Scottish Universities (other than Strathclyde), Oxford and Cambridge are classified as first degrees.

BTEC, BEC and TEC Certificates and Diplomas: BEC (Business Education Council) and TEC (Technical Education Council) qualifications have replaced ONC/OND and HNC/HND qualifications.

CSE/GCSE: Note that a CSE grade 1 is the equivalent of an O-level and is coded as such. All GCSE’s irrespective of grade are coded as such.

Scottish Qualifications: Abbreviations for the Scottish equivalents of BTEC, BEC and TEC and A and O levels are included. From 1985 SCOTBEC and SCOTEC have been merged to form SCOTVEC (Vocational Educational Certificate). This qualification can be a higher certificate, a national certificate, or a national certificate module.

A system of national vocational qualifications called NVQs (SVQs in Scotland) are comprised of levels which are subdivided into units. A list of the qualifications which make up the relevant NVQ levels is shown in Volume 5 (LFS Classifications) of the LFS User Guide.

In Spring 1996 & Spring 2004 the educational qualifications questions in the LFS were changed to provide more detailed information. Inevitably such improvements in data can lead to discontinuities. The changes made to these questions were sufficiently large enough to warrant a change in name. Please see individual variable notes for details.

Present Study

Education refers to continuous full time education, that is education without a break. Holiday jobs do not count as a break provided that the person intended to complete the course. In addition a gap of up to a
year between going to school and going to college or university would not count as a break in continuous full time education. Similarly National Service between school or college would not count as a break. A sandwich course begun immediately after school finishes would be counted as continuous full time education. Nursing training and similar vocational training undertaken while receiving a wage are not counted as part of the continuous education process.

EDAGE - Age when completed full time education

(0-95) Age left school
(96) Still in education
(97) Never had education

FREQUENCY: Each quarter from Spring 92

COVERAGE: Applies to all respondents in employment or of working age.

QULNOW - Whether working or studying towards a qualification

(1) Yes
(2) No

FREQUENCY: Spring quarters only from Spring 93 to Spring 94. Spring and Autumn quarters from Spring 95 to Autumn 99. Each quarter from Spring 2000

COVERAGE: Applies to all respondents in employment or of working age.

NOTES: This variable replaced TRGAIN. It identifies those respondents who are working towards a qualification.

DNA (-9) will include people who were not contacted in the quarter this question was asked. See Volume 1(Background and Methodology), “Imputation in the LFS”, for full details.

Respondents who have enrolled on a course but have not started at the time of interview are coded 2 'Waiting for term to (re)start'. The introduction of this category in Spring 97 caused a discontinuity in data on full-time students (see Labour Market Trends, June 1998).

SOC10A - Occupation in apprenticeship

SOC2KAP - Occupation in apprenticeship

(1111-9259) Range of occupation codes

FREQUENCY: Each quarter from Spring 01 until OD10.

COVERAGE: Applies to all respondents.

NOTES: This variable replaces SOCAPP. This variable is derived from OCOD2KA & APPR8.

The new SOC2000 variables were introduced into the Labour Force Survey in Spring 2001, because SOC90 became outdated. The extensive revisions to the Standard Occupational Classification (SOC) include a tighter definition of managerial occupations and moving many job titles between major groups to reflect the repositioning of certain jobs. New occupations have been introduced in the fields of computing, environment and conservation and customer service occupations. Most of the major groups have been re-named and all have a different composition in terms of job titles compared with their SOC90 counterparts. There is no exact correspondence between SOC90 and SOC2000 at any level.

Training Done In Last 13 Weeks, 4 Weeks

(1) Yes
(2) No

FREQUENCY: Each quarter from Summer 94

ED4WK - Job related training or education in the last 4 weeks

(1) Yes
(2) No

FREQUENCY: Each quarter from Spring 92 (but not summer 94 - use ED4FUT)

COVERAGE: Applies to all respondents aged 16-69 who are in employment or in receipt of education/training and who have taken part in job-related education/training in the 3 months prior to the reference week (ED13WK = 1).

FUTUR4 - Job related training or education in the last 4 weeks

COVERAGE: Applies to all respondents aged 16-69 who are doing college-based training and those not in work or full-time education and who have taken part in a job-related education/training course in the 3 months prior to the reference week (FUTUR13 = 1). The course is connected to a job that the respondent might be able to do in the future.

NOTES: FUTUR4 applies to respondents 16-69 who are not at school to whom ED4WK does not apply. To get JOBTRN for - In employment, unemployed and Inactive - ED4WK and FUTUR4 need to be added together.

There are errors in the coverage of these variables in Winter 93/94 as the question was asked of those still at school and not asked of those in 'other full-time (continuous) education'; this also affects all other variables routed from these variables.

JOBED - Was training part of the education course previously mentioned

(2) No

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents who have taken part in job-related education/training in the previous 3 months and are on a full-time/part-time course (ED13WK = 1 OR FUTUR13 = 1 and ATTEND = 1, 2).

NOTES: This variable replaces TRHR93

TRHR93 - Time spent on training

(0-96) Hours spent training
(97) 97 or more hours spent training

FREQUENCY: Each quarter from Spring 93 to Winter 98. AJ quarters only from Spring 99 until 2010.

COVERAGE: Applies to all respondents who have taken part in any job-related education or training in the reference week (ED1FUT = 1).

NOTES: Respondents are asked for the actual number of hours spent training (away from the job) in the reference week, including any private study time. This variable replaced TRNHR from Spring 93. In Spring 93 the coverage for the questions was incorrect and the data should not be used.

TRONJB - Time spent training on the job

(0-96) Hours spent training
(97) 97 or more hours spent training

FREQUENCY: Each quarter from Spring 93 to Winter 98. AJ quarters only from Spring 99

COVERAGE: Applies to all respondents who have taken part in any on or off-the-job-related education or training in the reference week (ED1FUT = 1 AND JOBTRN = 1 or 3).
NOTES: This identifies the number of training hours that are on the job training. In Spring 93 this variable was incorrectly routed to JOBTRN 2 and 3 instead of 1 and 3 and so the data should not be used. This was corrected from Autumn 93. In Winter 93/94 although the coverage for TRONJB appears to be incorrect in the questionnaire the data is correct.

HEALTH

HEALTH PROBLEMS

The focus and number of questions on health and disability changed in Spring 1997 to reflect the provisions of the Disability Discrimination Act 1995. They are now concerned with all health problems, whilst previously the emphasis had been on problems which affect respondents work. See the June 1998 issue of Labour Market Trends for guidance about disability data.

From Spring 96 the frequency of disability/health questions were changed from half-yearly to quarterly. This discontinuity affected data in Spring 96, which is not consistent with any other quarters.

LNGLIM - Whether health problem lasting more than 12 months

(1) Yes
(2) No

FREQUENCY: Summer and Winter quarters only from Winter 93 to Winter 95. Each quarter from Spring 96

COVERAGE: From Spring 92 to Winter 96: Applies to all respondents of working age whose health problems or disabilities limit the kind of paid work they can do (LIMITT = 1).

From Spring 97 to Winter 99: Applies to all respondents of working age.
From Spring 2000: Applies to all respondents of working age or those aged 75 and under and first contact or those aged 75 and over and are not too ill/distressed to continue.

**NOTES:** DNA (-9) will include people who were not contacted in the quarter this question was asked. See LFS User Guide Volume 1 (Background and Methodology) “Imputation in the LFS”, for full details. From 1997 all health sections start with LNGLIM. To get a comparison with earlier quarters prior to Spring 1997, use LIMITK = yes and LNGLIM = yes.

Users are advised to always filter on working age when using this variable, to ensure comparability over a time-series.

**LIMITK - Whether health problem affects the kind of paid work respondent might have done**

(1) Yes
(2) No

**FREQUENCY:** Each quarter from Spring 97

**COVERAGE:** Applies to all respondents with health problems and those of working age or pensioners looking for work or wanting work.

**NOTES:** The respondents decide whether a health problem/disability limits the paid work which they can do. If respondents seek clarification, they are advised not to limit the assessment to the paid work (if any) which they do at present.

**LIMITA - Whether health problem affects the amount of paid work that can be done**

(1) Yes
(2) No

**FREQUENCY:** Each quarter from Spring 97

**COVERAGE:** Applies to all respondents with health problems and those of working age or pensioners looking for work or wanting work.

**NOTES:** This question records whether a disability affects the amount of paid work undertaken, or might be undertaken, by the respondent. Again this is not restricted to the respondent’s current job, nor to respondents who are currently employed.

**HEAL(01-17) - What health problems does the respondent have**

Spring 97 onwards

FREQUENCY: Each quarter from Spring 92 to Winter 92. Summer and Winter quarters only from Summer 93 to Winter 95. Each quarter from Spring 96

COVERAGE: Applies to all respondents in employment and all other men aged 16-64 and women aged 16-59 who said that health or disability problems limit the kind of paid work they can do. (Spring 92 to Winter 94: LIMITT = 1 AND LNGLIM = 1; From Spring 95: LNGLIM = 1).

NOTES: For more accurate results always use the variable HEALTH as it gives the respondent’s main/most significant health problem and not a general problem. It should be noted that the order of health problems at HEAL does not necessarily give the most problematic first. Again use HEALTH for this information.

Respondents can give up to 17 problems. This variable was coded HEAL(00-10) from Spring 92 to Summer 93; HEAL(00-12) from Winter 93 to Winter 95; HEAL(00-14) from Spring 96 to Winter 96; and HEAL(01-17) from Spring 97.

DNA (-9) will include people who were not contacted in the quarter this question was asked. See LFS User Guide Volume 1 (Background and Methodology), “Imputation in the LFS” for full details.

**Code 4** - difficulty in seeing should not be considered a disability if it is effectively compensated for by wearing glasses or contact lenses.

**Code 5** - difficulty in hearing should be considered without the use of a hearing aid.

**Code 7** - severe disfigurements excludes those arising from tattooing or body piercing but would include scars, birthmarks, limb or postural deformation or diseases of the skin.

**Code 8** - excludes hay fever (seasonal allergic rhinitis) except where it aggravates the effects of an existing condition.

**Code 14** - specific learning difficulties includes conditions such as dyslexia or dyscalcula; severe learning difficulties covers mental impairments or mental handicap.

**Code 15** - Mental illness includes a wide range of conditions related to mental functioning but should be a clinically well recognised illness. Mental illnesses that should not be included are; the tendency to commit arson or to steal, the tendency to physically or sexually abuse others, exhibitionism or voyeurism are not included.

**Code 16** - Progressive illnesses should be recorded if there is some effect on the respondent’s normal day to day activities, even if it is minor at the time of interview. If the respondent has been diagnosed with a progressive illness, but they are not suffering from any symptoms which affect their activities yet, then they should not be included.

Addiction to or dependency on alcohol, nicotine, drugs or other substance (unless resulting from the substance being prescribed for the respondent) should not be included.

NOTES: Users are advised to always filter on working age when using this variable, to ensure comparability over a time-series.

Normal day-to-day activities are those which are carried out by most people on a daily basis, and we are interested in disabilities/health problems which have a substantial adverse effect on respondent’s ability to carry out these activities.

There are several ways in which a problem may affect the respondent’s day to day activities:

**Mobility** - for example, unable to travel short journeys as a passenger in a car, unable to walk other than at a slow pace or with jerky movements, difficulty in negotiating stairs, unable to use one or more forms of public transport, unable to go out of doors unaccompanied.

**Manual dexterity** - for example, loss of functioning in one or both hands, inability to use a knife or fork at the same time, or difficulty in pressing buttons on a keyboard

**Physical co-ordination** - for example, the inability to feed or dress oneself; or to pour liquid from one vessel to another except with unusual slowness or concentration.

**Problems with bowel/bladder control** - for example, frequent or regular loss of control of the bladder or bowel. Occasional ‘bedwetting’ is not considered a disability.

**Ability to lift, carry or otherwise move everyday objects (for example, books, kettles, light furniture)** - for example, inability to pick up a weight with one hand but not the other, or to carry a tray steadily.

**Speech** - for example, unable to communicate (clearly) orally with others, taking significantly longer to say things. A minor stutter, difficulty in speaking in front of an audience, or unable to speak a foreign language would not be considered impairments.

**Hearing** - for example, not being able to hear without the use of a hearing aid, the inability to understand speech under normal conditions or over the telephone.
**Eyesight** - for example, while wearing spectacles or contact lenses - being unable to pass the standard driving eyesight test, total inability to distinguish colours (excluding ordinary red/green colour blindness), or inability to read newsprint.

**Memory or ability to concentrate, learn or understand** - for example, intermittent loss of consciousness or confused behaviour, inability to remember names of family or friends, unable to write a cheque without assistance, or an inability to follow a recipe.

**Perception of risk of physical danger** - for example, reckless behaviour putting oneself or others at risk, mobility to cross the road safely. This excludes (significant) fear of heights or underestimating risk of dangerous hobbies.

(16) Progressive illness not included elsewhere (e.g. cancer, multiple sclerosis, symptomatic HIV, Parkinson's disease, muscular dystrophy)
(17) Other health problems or disabilities

**FREQUENCY:** Each quarter from Spring 97

**COVERAGE:** Applies to all respondents who have had a long term health problem/disability that has lasted longer than a year (HEALYR =1).

**NOTES:** The notes for HEAL also apply here. Respondents can give up to 10 problems. From Spring 97 to Spring 99, this variable was coded HEALPB (01-17). From Summer 99, this variable is coded HEALPB (01-10).

**LERNDB - Learning difficulty or learning disability?**

(1) Learning difficulty
(2) Learning disability
(3) Both

**FREQUENCY:** Each quarter from Spring 2006.

**COVERAGE:** Applies to all respondents who have said that they have a severe or specific learning difficulty (i.e. HEALPB=14).

**HEALYL - Whether past health problems or disabilities limited activity**

(1) Yes
(2) No
(3) Don’t know

**FREQUENCY:** Each quarter from Spring 97

**COVERAGE:** Applies to all respondents who have had a long term health problem/disability that has lasted longer than a year (HEALYR =1).

**NOTES:** If respondents were receiving medication or treatment, they are asked to consider what the situation would be without the medication or treatment.

The qualifying statement concerning medication or treatment includes:
- the use of a prosthesis i.e. any artificial device attached to the body as an aid, for example, an artificial limb, a heart pacemaker, or a hearing aid (except spectacles or contact lenses);
- the use of any other form of aid or equipment such as a wheelchair.

If someone says their condition does not have any affect on them because it is kept under control by treatment, they are still coded ‘1’. For example, some people take medication and experience no impairment in their quality of life as a result, but without that medication they would die.

Normal day-to-day activities are those which are carried out by most people on a daily basis, and we are interested in disabilities/health problems which have a substantial adverse effect on respondent’s ability to carry out these activities.

See HEALIM for examples of ways in which a problem may affect the respondent’s day to day activities.

**DISCURR - Current disability**

(1) Both DDA (current disability) and work-limiting disabled
(2) DDA disabled (current disability) only
(3) Work-limiting disabled only
(4) Not disabled

**FREQUENCY:** Each quarter from Spring 98

**COVERAGE:** Applies to all respondents of working age and those above working age who indicate they are in work, that they are looking for work or that they would like a regular paid job.
NOTES: DDA disabled (current disability) includes those who have a long-term disability which substantially limits their day-to-day activities. Work-limiting disabled includes those who have a long-term disability which affects the kind or amount of work they might do.

This variable is derived from AGE, LNGLIM, HEALIM, HEAL(1-17), LIMITK & LIMITA.

**XDISDDA - Unadjusted DDA disabled [READ NOTES BEFORE USING THIS VARIABLE]**

**FREQUENCY:** Each quarter from Spring 98 to Winter 99 (on ONS datasets only), Each quarter from Spring 2000

**COVERAGE:** Applies to all respondents of working age.

**NOTES:** This variable is designed to help users estimate the number of people who meet the DDA definition of disability. This definition has two parts: current and past disability;

Current disability includes people who have a physical or mental impairment which has a substantial and long-term adverse effect on a person’s ability to carry out normal day-to-day activities, and people with a progressive condition (e.g. cancer, multiple sclerosis) from the moment any impairment resulting from it first has some effect on their ability to carry out normal day-to-day activities.

Past disability includes people who have had a disability within the DDA definition in the past, even if they have since recovered. The LFS data on past disabilities does not include any proxy response because it is not thought that proxy respondents would be able to provide accurate information on past disabilities. Therefore users need to make an adjustment to any estimates they derive from this variable involving past disabilities. The adjustment process is described below.

**Adjustment for past disabilities.**

To take account of the absence of proxy data, the suggested method is to apply the same proportion of proxy response in wave 1 at HEALIM to the number of people in category 3 of XDISDDA. Thus, in Spring 1998, a table of HEALIM by IOUTCOME filtered on THISWV = 1 shows that the proportion of proxy response was 24% so the adjustment made to XDISDDA is to multiply the past disabilities only category by 100/76. So the estimate of total DDA disabled people in the UK in Spring 1998 is:

**FREQUENCY:** Each quarter from Summer 97 (on UA/LA datasets only)

**COVERAGE:** Applies to all respondents who have a degree level qualification or equivalent (From Summer 97 to Winter 03: DEGREE = 1, 2, 3 OR QUALS = 8; From Spring 04: DEGREE4 = RESPONSE OR QUALS4 = 8; From JM07: DEGREE7 = RESPONSE OR QUALS4 = 8).

**NOTES:** Broadbanding of SNGDEG. In Spring 04 the coding frame for SNGDEG was up-dated to reflect changes in subjects. Notes on SNGDEG also apply here.
SYSTEM VARIABLES

System variables are included within the LFS questionnaire to aid the flow of the interview and provide additional information which is necessary for the procedure of the survey at subsequent waves, but is not collected for data purposes. Unless otherwise specified, they apply to all persons/households.

NURSE - Whether living in NHS accommodation

(1) Persons in NHS accommodation
(-9) Persons not in NHS accommodation

FREQUENCY: Each quarter from Winter 92
NOTES: This variable should be used as a filter for an either/or response only.

HALLRES - Whether living in a hall of residence

(1) Yes
(2) No

FREQUENCY: Each quarter from Summer 96
COVERAGE: Applies to all respondents aged 16 or over.
NOTES: This is an interviewer check question (not asked of the respondent) to confirm whether there are any household members currently living in a hall of residence and therefore eligible to be interviewed as part of this household.

QUOTA - Stint number where interview took place

(1-960) Stint number

FREQUENCY: Each quarter from Spring 92
NOTES: The LFS sample is divided into 960 stints each week to be allocated to face-to-face interviews. See LFS User Guide volume 1 (Background and Methodology) for further information.
Please note that this variable was removed from EUL datasets from JM11 onwards.

WEEK - Week number when interview took place

(1-13) Week number

FREQUENCY: Each quarter from Spring 92
NOTES: There are 13 weeks in each LFS quarter and this variables identifies which week in the quarter the interview took place.

W1YR - Year that address first entered survey

Single digit number corresponds to last digit of year, e.g. 5 for 1995.

FREQUENCY: Each quarter from Spring 92
QRTR - Quarter that address first entered survey

(1) JM (January to March)
(2) AJ (April to June)
(3) JS (July to September)
(4) OD (October to December)

FREQUENCY: Using seasonal quarters - each quarter from Spring 92 to Autumn 95. Using calendar quarters – each quarter from JM06.

NUMHHLD - Number of households at address

(1-81) Household number

FREQUENCY: Each quarter from Spring 92

NOTES: From Spring 92 to Summer 94 this variable was called NUMHLD on SPSS datasets. From Autumn 94, this variable is called NUMHHLD on all formats.

ADD - Address number on interviewer address list

(1-80) Address number

FREQUENCY: Each quarter from Spring 92

NOTES: This variable is for interviewers use and refers to the number of the address on their address list.

WAVFND - Wave at which household was first found

(1-5) Wave number

FREQUENCY: Each quarter from Spring 92

NOTES: The household can change between waves because people move during their time in the survey. This variable allows a change of household to be identified.

HHLD - Household reference

(1-81) Household reference

FREQUENCY: Each quarter from Spring 92

NOTES: At some addresses more than one household can be found. NUMHHLD identifies the number of occupied households at a particular address whereas HHLD identifies which household (including vacant households) at that address the data refers to.

THISWV - Wave to which data refers

(1-5) Wave number

FREQUENCY: Each quarter from Spring 92
REFWKD - Reference day for current interview

   (1-31) Day number

FREQUENCY: Each quarter from Spring 92

REFWKM - Reference month for current interview

   (1-12) Month number

FREQUENCY: Each quarter from Spring 92

REFWKY - Reference year for current interview

   Two digits corresponding to last two digits of year, e.g. 95 for 1995

FREQUENCY: Each quarter from Spring 92

REFDTE - Reference date for current interview

   YYMMDD - where Y is year, M is month, D is day e.g. 961225 for 25 December 1996

FREQUENCY: Each quarter from Autumn 96

NOTES: This variable is an alternative presentation of the information contained in REFWKD, REFWKM & REFWKY.

RECNO - Record number

   (1-15) Record number

FREQUENCY: Each quarter from Spring 92

NOTES: This variable is created automatically and establishes the sequence order of individual records.

PERSNO - Person number within household

   (0-90) Person number within household
   (91-97) Person number within halls of residence

FREQUENCY: Each quarter from Spring 92

NOTES: This variable should only be used for including or excluding persons in student halls of residence. Care should be taken as these are mainly proxy responses.

RESPNO - Person number of the person who completed the interview

   (0-97) Person number

FREQUENCY: Each quarter from Spring 92

NOTES: At the end of each individuals interview the interviewer records the PERSNO of the person who completed the interview. Often proxy interviews are conducted, where someone else in the household will answer on behalf of the individual.
HSERIAL - Number that uniquely identifies a household

**FREQUENCY:** Spring quarters only from Spring 92 to Spring 94. Spring and Autumn quarters from Spring 95

**COVERAGE:** Applies to all households.

**NOTES:** This variable is only available on SPSS household datasets. This variable is derived using QUOTA, WEEK, W1YR, QRTR, ADD, WAVFND & HHLD.

FUSERIAL - Number that uniquely identifies a family unit

**FREQUENCY:** Spring quarters only from Spring 92 to Spring 94. Spring and Autumn quarters from Spring 95

**COVERAGE:** Applies to all family units.

**NOTES:** This variable is only available on SPSS household datasets. This variable is derived using QUOTA, WEEK, W1YR, QRTR, ADD, WAVFND & HHLD.

TYPINT - Telephone or face-to-face interview

1. Telephone
2. Face to face

**FREQUENCY:** Each quarter from Summer 97

**NOTES:** TYPINT relates to the current interview. Some questions are asked only at wave 1 with information rolled forward or checked at subsequent interviews, so users should be careful about attributing data to a telephone or face-to-face interview without checking first how the data are collected. See LFS User Guide volume 1 (Background and Methodology), section on “Fieldwork”.
