

Quarterly National Accounts

3rd quarter 2011

Coverage: **UK**
Date: **22 December 2011**
Geographical Area: **UK**
Theme: **Economy**

Headline figures are:

- UK gross domestic product (GDP) in volume terms increased by 0.6 per cent in the third quarter of 2011.
- Output of the production industries rose by 0.2 per cent, within which manufacturing rose by 0.1 per cent.
- Output of the service industries increased by 0.7 per cent, while output of the construction industry increased by 0.3 per cent.
- Household final consumption expenditure was unchanged in volume terms in the latest quarter.
- Real household disposable income rose by 0.3 per cent in 2011 quarter three.

Summary

This bulletin contains information on the third estimate of GDP for 2011 quarter three. It includes information, along with revisions to and more detail on the output, expenditure and income approaches to GDP. Also included are data on the institutional sector accounts, including the household saving ratio and disposable income.

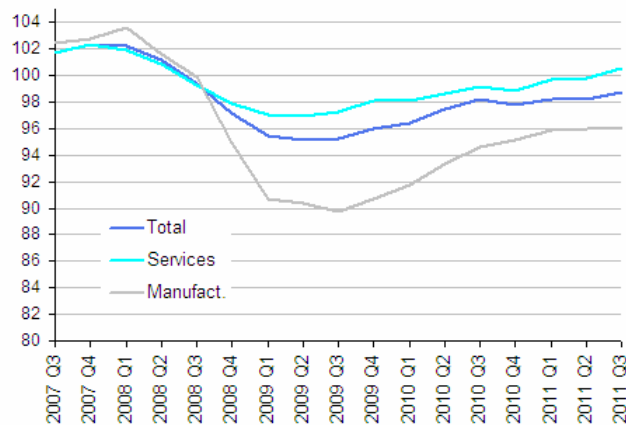

Key Data 2011 Q3

	Household saving ratio	Real household disposable income	Gross domestic product		
			Current market prices	Chained volume measure	Chained volume measure
	per cent	per cent	2008=100	2008=100	per cent
seasonally adjusted					
2010 Q1	8.5	0.5	100.4	96.6	0.4
2010 Q2	6.3	-1.7	101.7	97.7	1.1
2010 Q3	7.0	0.5	102.9	98.3	0.7
2010 Q4	6.8	-0.7	103.2	97.9	-0.5
2011 Q1	5.2	-1.9	104.5	98.3	0.4
2011 Q2	6.4	1.3	104.9	98.3	0.0
2011 Q3	6.6	0.3	106.0	98.8	0.6

Source: Office for National Statistics

1. Percentage change on previous quarter: seasonally adjusted

Output indices, CVM SA

GDP analysed by output categories, chained volume measures (Tables B1 and B2)

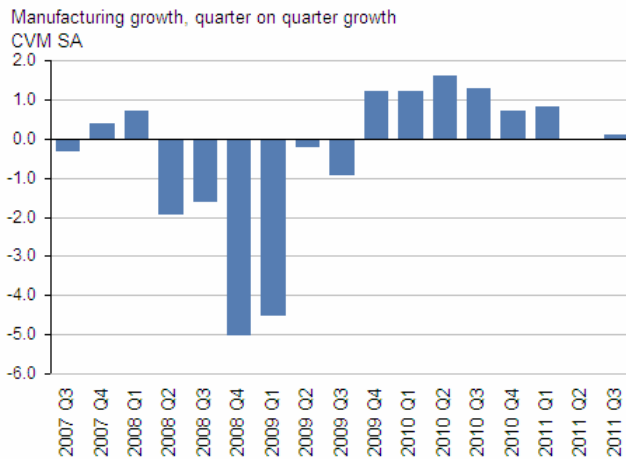

See Annex A for growth rates back to 2010 Q1.

The output of the agriculture, forestry & fishing sector increased by 0.5 per cent in the third quarter of 2011 compared with a decrease of 1.1 per cent in the second quarter of 2011.

The output of the production industries rose by 0.2 per cent in the third quarter of 2011. This compares with a fall of 1.4 per cent in the second quarter of 2011. In the year 2010, output of the production industries increased by 1.9 per cent.

Mining & quarrying output decreased by 0.2 per cent in the latest quarter. This compares with a decrease of 7.7 per cent in the previous quarter.

Manufacturing output rose by 0.1 per cent in the latest quarter.

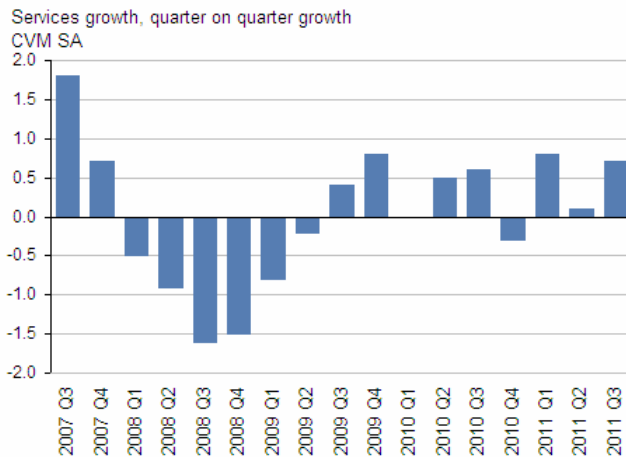

Electricity, gas, steam & air conditioning supply increased by 2.2 per cent in 2011 quarter three compared with a decrease of 1.4 per cent in 2011 quarter two.

Sewerage & waste management decreased by 0.5 per cent in the third quarter of 2011 compared with a decrease of 2.8 per cent in the second quarter of 2011.

Construction output is estimated to have increased by 0.3 per cent in 2011 quarter three. This compares with an increase of 3.1 per cent in 2011 quarter two. In the year 2010, construction output increased by 8.2 per cent.

Services output increased by 0.7 per cent in the third quarter of 2011 compared with an increase of 0.1 per cent in the second quarter of 2011. For the year 2010, services output increased by 1.4 per cent.

Output of the distribution, hotels & restaurants sector increased by 0.2 per cent in 2011 quarter three. Strength in hotels and restaurants was partly offset by a decline in distribution.

Output of the transport, storage & communication sector rose by 0.3 per cent in 2011 quarter three, compared with a fall of 0.2 per cent in 2011 quarter two. The increase was driven by growth in information and communication.

The business services & finance sector rose 1.2 per cent in 2011 quarter three, compared with an increase of 0.2 per cent in 2011 quarter two. The main drivers behind growth in 2011 quarter three were professional, scientific & technical activities and finance & insurance.

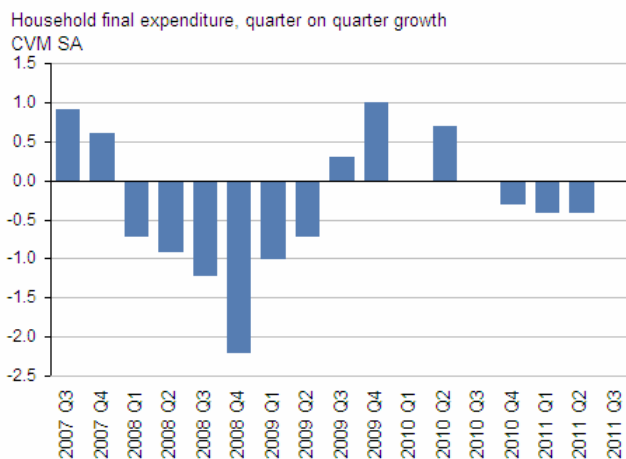

Government & other services output increased 0.6 per cent in 2011 quarter three, compared with an increase of 0.2 per cent in 2011 quarter two. The main drivers behind the growth in 2011 quarter three were human health & social work activities and education.

GDP analysed by expenditure categories, chained volume measures (Table C2)

See Annex B for growth rates back to 2010 Q1.

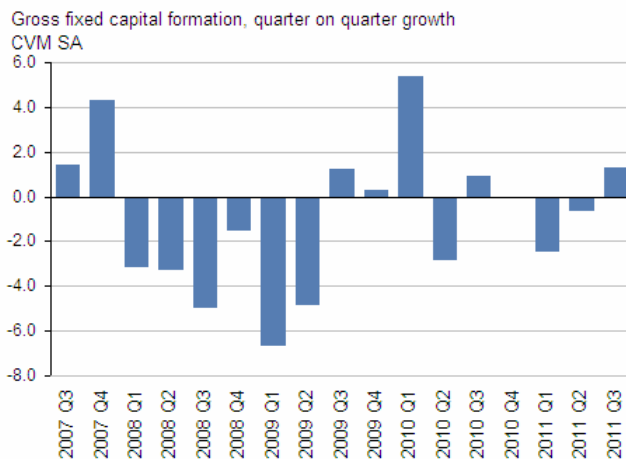

Gross domestic expenditure increased by 0.8 per cent in the third quarter of 2011.

Household final consumption expenditure was unchanged in 2011 quarter three, compared with a decrease of 0.4 per cent in 2011 quarter two. The level of household expenditure is now 1.0 per cent lower than in 2010 quarter three. The largest increase in spending in the latest quarter was on housing. This was offset by a decrease in spending on miscellaneous goods and services. For the year 2010, household final consumption expenditure rose by 1.2 per cent.

Government final consumption expenditure increased by 0.2 per cent in 2011 quarter three, compared with an increase of 0.4 per cent in 2011 quarter two. In 2010, government final consumption expenditure increased by 1.5 per cent.

Gross fixed capital formation rose by 1.3 per cent in the latest quarter, compared with a fall of 0.6 per cent in the previous quarter. In the year 2010, gross fixed capital formation rose by 3.1 per cent.

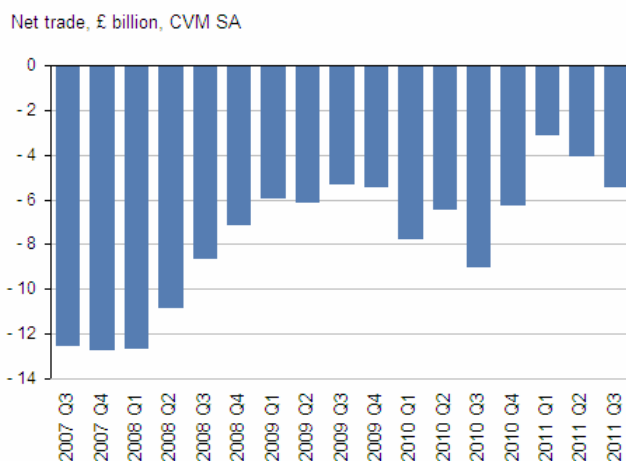

Including the alignment adjustment, the level of inventories increased by £2.9 billion in the latest quarter. In the year 2010, the level of inventories increased by £4.9 billion.

The deficit in net trade was £5.4 billion in 2011 quarter three, compared with a deficit in net trade of £4.0 billion in 2011 quarter two.

Exports of goods fell by 0.2 per cent in 2011 quarter three, driven by a fall in exports of fuels, This was partially offset by increases in exports of capital goods and chemicals. Imports of goods rose by 1.0 per cent in 2011 quarter three, driven by an increase in imports of capital goods and fuels. This was partly offset by a fall in imports of consumer goods.

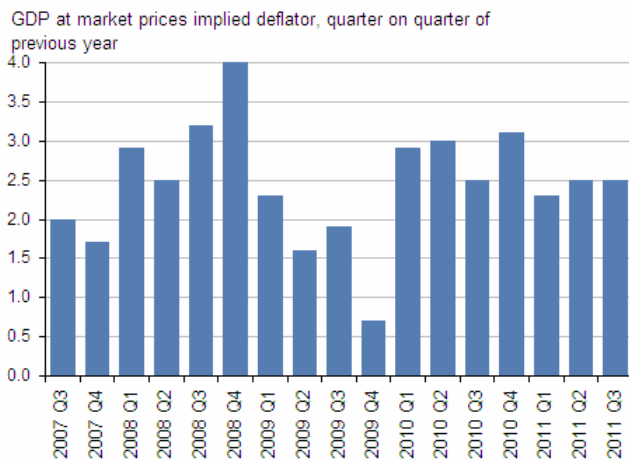

Exports of services fell by 1.6 per cent in the latest quarter, driven by exports of travel and other business. Imports of services fell by 1.3 per cent in 2011 quarter three, driven by imports of travel.

GDP implied deflator

See Annex D for growth rates back to 2010 Q1.

The gross domestic product implied deflator at market prices for 2011 quarter three is 2.5 per cent above the same quarter of 2010.

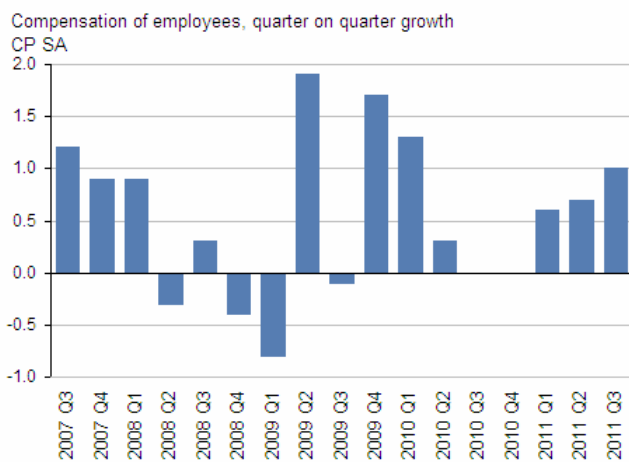

GDP analysed by income categories at current prices (Table D)

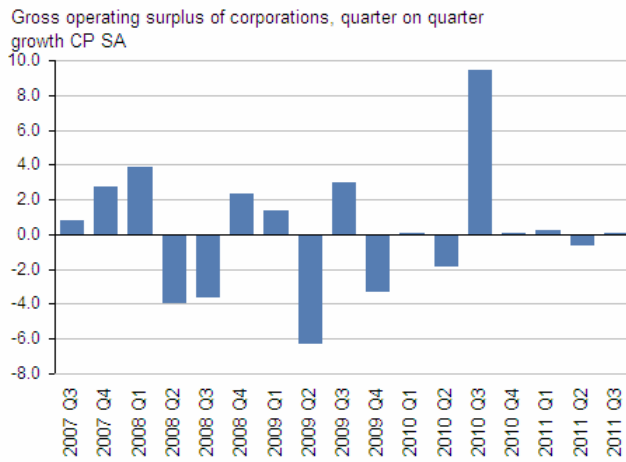

See Annex C for growth rates back to 2010 Q1.

GDP at current market prices rose by 1.0 per cent in 2011 quarter three, compared with an increase of 0.3 per cent in 2011 quarter two.

Compensation of employees increased by 1.0 per cent in 2011 quarter three, compared with an increase of 0.7 per cent in 2011 quarter two. In the year 2010, compensation of employees increased by 3.2 per cent.

The gross operating surplus of corporations rose by 0.1 per cent in 2011 quarter three, compared with a fall of 0.6 per cent in 2011 quarter two. Private non-financial corporations' operating surplus rose by 1.3 per cent in the latest quarter. Financial corporations' operating surplus fell by 4.2 per cent in 2011 quarter three. In the year 2010, gross operating surplus of corporations rose by 0.8 per cent.

Taxes on production less subsidies increased by 3.6 per cent in 2011 quarter three. In 2010 as a whole, taxes on production less subsidies increased by 16.3 per cent.

Economic background

The latest GDP data for the third quarter continue to indicate that growth in all three approaches is quite concentrated in a small proportion of components and is not broadly based. The additional data that have been taken on since the second estimate of third quarter GDP has however resulted in those key sources of growth changing slightly.

Growth in the output approach is very much concentrated in the service industries, within which it is primarily driven by the scientific, administration & support and financial & insurance service industries. Together these two service components contributed 0.3 percentage points to GDP growth. Education and health services contributed a further 0.1 percentage point.

Growth in the expenditure approach stems largely from increases in inventories, supported by gross fixed capital formation. Together, these two components account for 0.8 percentage points. However, net trade reduced this growth by 0.4 percentage points. Household spending and government consumption both made negligible contributions. For household spending, this reflects the weak position of household finances and consumer confidence. For government consumption, this reflects the continued squeeze on expenditure.

Under the income approach, growth in current prices was largely concentrated in compensation of employees (CoE) and taxes less subsidies, with some additional support from the gross operating surplus of private non-financial corporations. CoE in nominal terms has grown at a stronger rate than household consumption in the second and third quarters. This is a turnaround compared with much of 2009, 2010 and the early part of 2011, though this was partly due to household consumption in nominal terms being raised by a period of relatively strong inflation. Although private non-financial corporations made a positive contribution to growth, this contribution was relatively modest compared with most of 2010 and the first quarter of 2011. Taxes less subsidies have made a positive contribution to GDP growth in current prices for most of the last four years.

The profile of GDP growth in recent quarters continues to point towards a rather fragile economic picture. During the nine quarters of the recovery, the economy has gained just over half of the output lost during the five quarters of contraction.

SECTOR ACCOUNTS

Sector Accounts (Tables I, J1, J2, J3, K1 and K2)

Summary

The household saving ratio was 6.6 per cent in 2011 quarter three compared with 6.4 per cent in the previous quarter. For the year 2010 the saving ratio was 7.2 per cent.

Net lending by sector (Table I)

In 2011 quarter three, the central government and local government sectors were net borrowers. Public corporations, financial corporations, private non-financial corporations, households and the rest of the world sectors were net lenders.

Annually for 2010, the central government and local government sectors were net borrowers. Public corporations, financial corporations, private non-financial corporations, households and the rest of the world sectors were net lenders.

Central government

Net borrowing was £30.3 billion in 2011 quarter three following net borrowing of £32.0 billion in the previous quarter. For the year 2010, central government net borrowing was £147.7 billion compared with £147.9 billion in 2009.

Local government

Net borrowing was £1.6 billion in 2011 quarter three following net lending of £0.1 billion in the previous quarter. For the year 2010, local government net borrowing was £1.4 billion compared with £4.1 billion in 2009.

Public corporations

Net lending was £0.2 billion in 2011 quarter three, following net lending of £0.3 billion in the previous quarter. For the year 2010, public corporations net lending was £1.7 billion compared with net lending of £0.5 billion in 2009.

Financial corporations

Net lending was £5.2 billion in 2011 quarter three following net lending of £6.7 billion in the previous quarter. For the year 2010, financial corporations net lending was £17.6 billion compared with £46.3 billion in 2009.

Private non-financial corporations

Net lending was £12.0 billion in 2011 quarter three, following net lending of £17.2 billion in the previous quarter. For the year 2010, private non-financial corporations net lending was £53.1 billion compared with £50.4 billion in 2009.

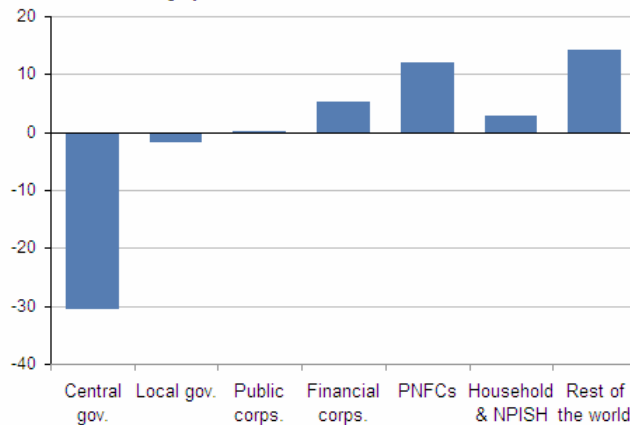

Household and non-profit institutions serving households

Net lending was £2.9 billion in 2011 quarter three following net lending of £2.8 billion in the previous quarter. For the year 2010, household and non-profit institutions serving households net lending was £24.9 billion compared with net lending of £38.1 billion in 2009.

Rest of the world

Net lending was £14.2 billion in 2011 quarter three, following net lending of £6.4 billion in the previous quarter. For the year 2010, net lending was £44.9 billion following on from £16.7 billion in 2009. This implies a UK current account deficit for 2010.

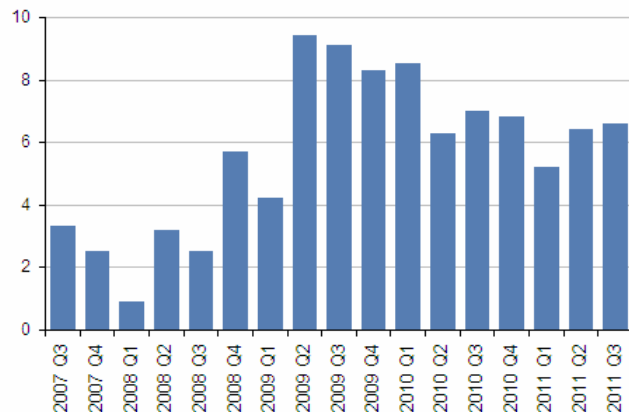

2011 Q3 Net lending by sector, £ billion, CP SA

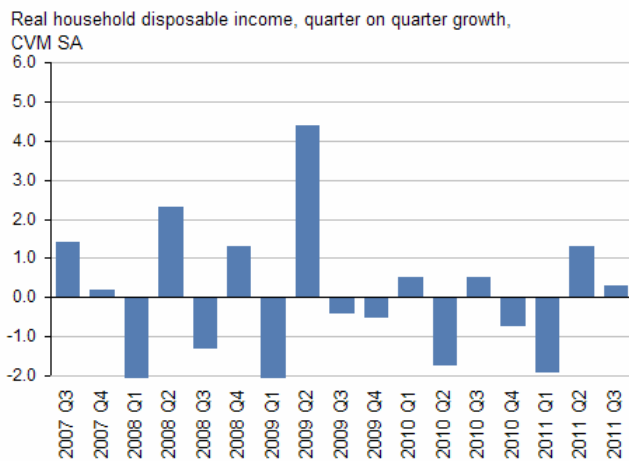

Household and non profit institutions serving households (NPISH) sector (Tables J1, J2 and J3)

The saving ratio in 2011 quarter three was 6.6 per cent compared with 6.4 per cent in 2011 quarter two. This rise was driven by higher wages and salaries and increased net social benefits, partially offset by increased household expenditure.

Household saving ratio, CP SA

The level of real household disposable income rose by 0.3 per cent in the latest quarter following a rise of 1.3 per cent in 2011 quarter two. The rise in the latest quarter is due to an increase of 1.2 per cent in nominal gross disposable income offset by a rise of 0.9 per cent in the household and NPISH final consumption expenditure deflator. Real household disposable income is now 1.0 per cent below the level seen in 2010 quarter three.

For the year 2010, real household disposable income decreased by 0.2 per cent following on from 1.6 per cent growth in 2009. This reflects a rise of 3.9 per cent in the nominal gross disposable income, which was driven by increased gross operating surplus and compensation of employees, offset by an increase of 4.1 per cent in the household and NPISH final consumption deflator.

Private non-financial corporations sector (Tables K1 and K2)

Net lending of private non-financial corporations was £12.0 billion in the latest quarter, compared with net lending of £17.2 billion in the previous quarter. This decrease in net lending in the latest quarter was driven by decreased property income and increased gross capital formation.

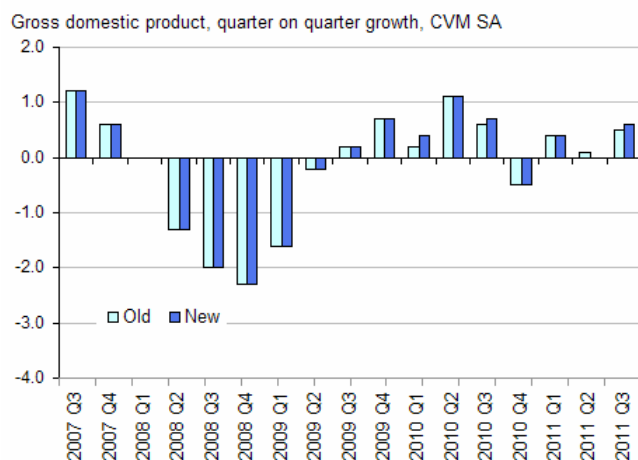

For the year 2010, net lending was £53.1 billion compared with £50.4 billion in 2009. This rise in net lending was driven by increased net property income and gross operating surplus offset by a rise in gross capital formation.

REVISIONS

GDP and components (previously published on 24 November 2011)

Revisions resulting from the incorporation of new data and replacement of forecasts and estimates based on earlier data have been taken back to the first quarter of 2010.

GDP growth for 2011 quarter three has been revised up by 0.1 percentage points from the estimate published last month. There has been downward revision of 0.1 percentage points to 2011 quarter two, an upward revision of 0.1 percentage points to 2010 quarter three and an upward revision of 0.2 percentage points to 2010 quarter one.

Output components

Growth in the volume of production output in 2011 quarter three has been revised down by 0.2 percentage points from the estimate published last month. The 2010 quarter three, 2011 quarter one and 2011 quarter two estimates for production output have been revised down by 0.1, 0.2 and 0.2 percentage points respectively. The 2010 quarter four estimate for production output has been revised up by 0.1 percentage points.

Growth in the volume of services output in 2010 quarter one, 2010 quarter two, 2010 quarter four, 2011 quarter one and 2011 quarter three have all been revised up by 0.1 percentage points. The 2010 quarter three estimate of services output has been revised up by 0.2 percentage points, while the 2011 quarter two estimate of services output has been revised down by 0.1 percentage points.

Growth in construction output in 2011 quarter three has been revised up by 0.5 percentage points from the previous estimate.

Expenditure components (chained volume measure)

Household final consumption expenditure has remained unrevised for 2011 quarter three.

General Government final consumption expenditure has been revised down by 0.7 percentage points in 2011 quarter three.

Gross fixed capital formation has been revised up 1.5 percentage points in 2011 quarter three.

Exports and imports of goods and services growth have both been revised up by 0.2 percentage points in 2011 quarter three.

Income components

In the latest quarter, compensation of employees has been revised down by 0.2 percentage points from the previously published estimate.

The gross operating surplus of corporations in 2011 quarter three has been revised down by 0.3 percentage points.

Sector accounts (previously published on 25 October 2011)

Revisions have been taken back to 2010 quarter one in this release.

Net lending by sector (Table I)**Central government**

Net borrowing in 2011 quarter two was revised from £33.9 billion to £32.0 billion.

Local government

Net lending in 2011 quarter two was revised from £0.4 billion to £0.1 billion.

Public corporations

Net borrowing in 2011 quarter two was revised from £5 million to net lending of £0.3 billion.

Financial corporations

Net lending in 2011 quarter two was revised from £8.9 billion to £6.7 billion.

Private non-financial corporations

Net lending in 2011 quarter two was revised from £18.1 billion to £17.2 billion.

Household and NPISH.

Net lending in 2011 quarter two was revised from £5.6 billion to £2.8 billion.

Rest of the world

Net lending in 2011 quarter two was revised from £1.1 billion to £6.4 billion.

Household and non profit institutions serving households (NPISH) sector (Tables J1, J2 and J3)

The household saving ratio was revised down in 2011 quarter two from 7.4 per cent to 6.4 per cent.

Real household disposable income growth has been revised up from a rise of 1.2 per cent to a rise of 1.3 per cent in 2011 quarter two.

Summary of statistics for 2011 Q3 quarter on quarter growth

GDP Headline	
GDP average CVM SA	Largest increase (0.6%) for 4 quarters, since 2010 Q3, (0.7%). Previous quarter (0.0%).
GDP CP SA	Largest increase (1.0%) for 2 quarters, since 2011 Q1, (1.2%). Previous quarter (0.3%).
GDP deflator SA	Largest increase (0.5%) for 2 quarters, since 2011 Q1, (0.8%). Previous quarter (0.3%).
GDP – Output approach	
Market sector GVA CVM SA	Smallest increase (0.4%) for 2 quarters, since 2011 Q1, (0.3%). Previous quarter (0.5%).
Index of production CVM SA	Largest increase (0.2%) for 3 quarters, since 2010 Q4, (0.2%). Previous quarter (-1.4%).
Construction CVM SA	Smallest increase (0.3%) for 2 quarters, since 2011 Q1, (-1.6%). Previous quarter (3.1%).
Index of services CVM SA	Largest increase (0.7%) for 2 quarters, since 2011 Q1, (0.8%). Previous quarter (0.1%).
GDP – Expenditure approach	
Household consumption CVM SA	Largest increase (0.0%) for 4 quarters, since 2010 Q3, (0.0%). Previous quarter (-0.4%).
Government consumption CVM SA	Smallest increase (0.2%) for 3 quarters, since 2010 Q4, (-0.1%). Previous quarter (0.4%).
Gross fixed capital consumption CVM SA	Largest increase (1.3%) for 6 quarters, since 2010 Q1, (5.4%). Previous quarter (-0.6%).
Exports of goods and services CVM SA	Smallest decrease (-0.8%) for 2 quarters, since 2011 Q1 (1.3%). Previous quarter (-1.5%).
Imports of goods and services CVM SA	Largest increase (0.5%) for 3 quarters, since 2010 Q4, (1.2%). Previous quarter (-0.6%).
GDP – Income approach	
Compensation of employees CP SA	Largest increase (1.0%) for 6 quarters, since 2010 Q1, (1.3%). Previous quarter (0.7%).
Gross operating surplus of corporations CP SA	Largest increase (0.1%) for 2 quarters, since 2011 Q1, (0.2%). Previous quarter (-0.6%).

Background Notes

Release policy

1. This release includes data available up to 12 December 2011. Data are consistent with the Index of Production statistical bulletin published on 7 December 2011 and the Trade in Goods data within the UK Trade Statistical Bulletin published on 9 December 2011.
2. A preliminary estimate for the fourth quarter of 2011 will be published on 25 January 2012. The second estimate of GDP for the fourth quarter of 2011 will be published on 24 February 2011.

Forthcoming changes

3. As a result of a review of the content and presentation of GDP statistical bulletins and following consultation with key users, the ONS will be making some presentational changes to future releases. From the second estimate of GDP for 2011 quarter 4 published on 24 February, table E (the detailed breakdown of changes in inventories) will no longer be included, but an additional table, equivalent to table M in the quarterly national accounts bulletin (quarterly alignment adjustments), will be included. Additionally, in all subsequent second estimate and quarterly national accounts bulletins, the aggregate income and expenditure tables will include the alignment adjustments as "of which" items within the relevant components - changes in inventories and gross operating surplus.

Treatment of Olympic ticket sales

4. An article titled 'Treatment of the Sale of Olympic Tickets in the National Accounts' is available on the National Accounts website at

<http://www.ons.gov.uk/ons/rel/naa2/second-estimate-of-gdp/q2-2011/treatment-of-the-sale-of-olympic-tickets.pdf>

Basic Quality Information for GDP Statistical Bulletin

Summary Quality reports

5. A Summary Quality Report for this Statistical Bulletin can be found on the National Statistics website at:

<http://www.ons.gov.uk/ons/rel/naa1-rd/united-kingdom-national-accounts/summary-quality-report-for-gross-domestic-product--gdp--data-releases/summary-quality-report-for-gross-domestic-product--gdp--data-releases-.pdf>

Key quality issues

6. *Common pitfalls in interpreting series:* Expectations of accuracy and reliability in early estimates are often too high. Revisions are an inevitable consequence of the trade-off between timeliness and accuracy. Early estimates are based on incomplete data.

Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error' but in this context the word refers to the uncertainty inherent in any process or calculation that uses sampling, estimation or

modelling. Most revisions reflect either the adoption of new statistical techniques or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable ‘errors’ such as human or system failures and such mistakes are made quite clear when they do occur.

Reliability

7. Estimates for the most recent quarters are provisional and are subject to revision in the light of updated source information. ONS currently provides an analysis of past revisions in the GDP and other Statistical Bulletins which present time series. Details can be found at:

<http://www.ons.gov.uk/ons/rel/elmr/economic-trends--discontinued--no-604--march-2004/ons-policy-on-standards-for-presenting-revisions-in-time-series-first-releases.pdf>

ONS has a webpage dedicated to revisions to economic statistics which brings together ONS work on revisions analysis, linking to articles, revisions policies and key documentation from the Statistics Commission's report on revisions. The webpage can be found at:

<http://www.ons.gov.uk/ons/guide-method/method-quality/specific/economy/revisions/economic-statistics/index.html>

Revisions to data provide one indication of the reliability of key indicators. The tables below show summary information on the size and direction of the revisions which have been made to data covering a five-year period. A statistical test has been applied to the average revision to find out if it is statistically significantly different from zero. An asterisk (*) shows that the test is significant.

8. Table 1 below shows the revisions to month 1 and month 2 estimates of GDP. The analysis of revisions between month 1 and month 2 uses month 2 estimates published from February 2007 (2006 q4) to November 2011 (2011 q3). The analysis of revisions between month 2 and month 3 uses month 3 estimates published from December 2006 (2006 q3 to September 2011 (2011 q2).

Table 1: Revisions to early estimates of GDP growth

Revisions to GDP growth	GDP growth in latest period (per cent)	Revisions between early estimates of GDP growth (quarterly, CVM)	
		Average over the last five years	Average over the last five years without regard to sign (average absolute revision)
Between M1 and M2	0.6	0.01	0.05
Between M2 and M3	0.6	-0.04	0.08

Table 2 shows the revisions to GDP growth and the household saving ratio between the estimate published three months after the end of the quarter and the equivalent estimate three years later.

For GDP and Household saving ratio, the analysis uses month 3 estimates first published from December 2003 (2003 q3) to September 2008 (2008 q2) for GDP.

Table 2: Revisions to month 3 estimates of GDP growth

	GDP growth in latest period (per cent)	Revisions between first publication and estimates three years later	
		Average over the last five years	Average over the last five years without regard to sign (average absolute revision)
GDP growth (quarterly, CVM)	0.6	-0.07	0.23
Household saving ratio	6.6	-0.95	1.21

Spreadsheets giving revision triangles (real time databases) of estimates from 1992 to date, and the calculations behind the averages in both tables are available on the National Statistics website.

Revisions triangles for the main components of GDP from expenditure, output and income approaches are also available,

An article titled 'Understanding the quality of early estimates of Gross Domestic Product', which was first published in December 2009, is available on the National Statistics website at

<http://www.ons.gov.uk/ons/rel/gva/gross-domestic-product-preliminary-estimate/understanding-the-quality-of-early-estimates-of-gross-domestic-product/understanding-the-quality-of-early-estimates-of-gross-domestic-product-.pdf>

Coherence

9. Historic experience shows that the output approach provides the most timely approach to measuring GDP growth. GDP growth according to the expenditure and income approaches is therefore brought into line with that recorded by output.

Further information

10. Latest copies of this and other ONS releases are available under Press Releases on the National Statistics website:

<http://www.ons.gov.uk/ons/publications/index.html>

More information underlying the National Accounts can be found at:

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and includes subsidies on production.

3 Weights may not sum to the total due to rounding.

4 Comprising sections R, S and T of SIC(2007).

1 The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.
