The volume of rail freight moved in July to September 2017 rose by 2% compared to the same quarter last year.

**Freight moved by commodity, Great Britain, 2017-18 Q2**

The total volume of rail freight moved increased to 4.3 billion net tonne kilometres in 2017-18 Q2 compared to 2016-17 Q2. **Construction** and **domestic intermodal** respectively recorded record volumes of 1.13 and 1.72 billion net tonne kilometres.

In total, 18.4 million tonnes of freight was lifted in 2017-18 Q2. This was a decrease of 3% compared with the same quarter last year, and marks the lowest volume recorded since the start of the time series in 1996-97 Q1.

Normalised freight delay rose to 11.9 minutes per 100 train kilometres, an increase of 15% compared to 2016-17 Q2.

Total freight train kilometres recorded a slight reduction (0.01 million kilometres) compared to 2016-17 Q2. This is the lowest amount recorded since the time series began in 2010-11 Q1.
1. Freight moved

Annual 2016-17

The total volume of rail freight moved fell to 17.2 billion net tonne kilometres in 2016-17, a 3% reduction on 2015-16. This section is unchanged from the 2016-17 Q4 statistical release.

The volume of rail Freight moved (total) – chart (Table 13.7)
Great Britain data 1982-83 to 2016-17

More detailed analysis of the annual data can be found in the 2016-17 Q4 statistical release.

Freight moved data, measured in net tonne kilometres, shows the amount of freight which is moved on the railway network, taking into account the weight of the load and the distance carried.

Freight moved is disaggregated by seven commodities which are also summed to provide an overall total freight moved. The seven commodities are coal, metals, construction, oil and petroleum, international, domestic intermodal and other.

In addition to the seven commodities listed above the amount of goods used for railway engineering work is also reported, under the ‘infrastructure’ category. This is not included in the totals published in the freight moved tables and charts.
2017-18 Quarter 2 Results

Total freight moved increased (2%) in 2017-18 Q2 compared to the same quarter last year, recording 4.3 billion net tonne kilometres.

The volume of rail freight moved (billion net tonne km), Great Britain, 1998-99 Q1 to 2017-18 Q2 (Table 13.7)
### Rail freight moved (2017-18 Q2, Great Britain)

</table>

¹ [https://www.ons.gov.uk/businessindustryandtrade/retailindustry/bulletins/retailsales/september2017 (main points)]
² [https://www.ons.gov.uk/businessindustryandtrade/constructionindustry/bulletins/constructionoutputpriceindicesops/ukjulytoseptember2017 (main points)]
Coal fell to 0.3 billion net tonne km (−13%) compared to last year. This is a record low that follows policy decisions to switch to more renewable fuel sources that have greatly reduced the use and transportation of coal over the last four years.5

Together, construction and domestic intermodal freight accounted for around two-thirds of total rail freight moved this quarter. This is considerably higher than the 44 per cent share of rail freight moved that these goods accounted for in July to September of 2013

Quarterly freight moved data are available on the data portal in: Table 13.7

5 https://www.theguardian.com/business/2017/jul/19/how-coal-lost-power-britain
2. Freight lifted

Annual 2016-17

In 2016-17, the total amount of freight lifted in Great Britain fell to 79.4 million tonnes, the lowest since 1984-85, representing an 8% decrease on 2015-16. The fall was largely driven by the decline in coal freight. This section is unchanged from the 2016-17 Q4 statistical release.

The mass of rail Freight lifted – chart (Table 13.6) Great Britain data 1982-83 to 2016-17

More detailed analysis of the annual data can be found in the 2016-17 Q4 statistical release.

Freight lifted is the mass of goods carried on the rail network measured in tonnes, excluding the weight of the locomotives and wagons. Unlike freight moved it takes no account of the distance travelled.

Freight lifted information is sourced from the four major FOCs: DB Schenker Rail (formerly EWS), Freightliner Ltd (formerly the BR container business), Direct Rail Services (DRS) and GB Railfreight.
2017-18 Quarter 2 Results

2017-18 Q2 recorded the lowest volume of freight lifted since the start of the time series in 1996-97 Q1: some 18.4 million tonnes. This was a decrease of 3% compared to 2016-17 Q2.

Freight lifted (million tonnes), Great Britain, 1996-97 Q1 to 2017-18 Q2 (Table 13.6)

- The volume of ‘Other’ freight lifted in 2017-18 Q2 decreased by 1% compared to 2016-17 Q2.
- The volume of coal lifted in 2017-18 Q2 was at a record low: 19% lower than in 2016-17 Q2.

Quarterly freight lifted data are available on the data portal in: Table 13.6
3. Freight delay per 100 train kilometres

Annual 2016-17

Normalised freight delay increased marginally by 0.1% to 10.8 minutes in 2016-17. For more information, please see the 2016-17 Q4 statistical release.

2017-18 Quarter 2 Results

Freight delays were recorded at a rate of 11.9 minutes per 100 train kilometres: an increase of 15% compared to 2016-17 Q2. The Freight Delivery Metric also indicated that fewer freight trains were arriving at their final destination within 15 minutes of their scheduled arrival time compared to the same quarter last year.

Normalised Freight delay per 100 train kilometres, Great Britain, 2007-08 Q1 to 2017-18 Q2 (Table 13.5)

Freight delay per 100 train kilometres is a normalised measure of delay experienced by FOCs. The measure is calculated from the total delay experienced by all GB freight operators divided by their train mileage.

Freight train mileage can fluctuate depending on demand so a normalised measure allows for comparison over time regardless of changing levels of freight traffic on the network.

Freight Delivery Metric (FDM) is another measure of freight train delay. It is based on the percentage of freight trains that arrive at their destination within 15 minutes of their scheduled arrival time. Results and more information can be found in the quarterly Passenger and Freight Rail Performance statistical release.

(P) This dataset is provisional as delay data is often revised as part of the delay attribution process (please see the Freight Rail Usage quality report for further details).

Quarterly freight delays per 100 train km data are available on the data portal: Table 13.5
4. Freight train kilometres by operator

Annual 2016-17

In 2016-17, total freight train kilometres fell to 34 million kilometres, a reduction of just under 1 million kilometres (−3%) compared to 2015-16. This is the lowest amount recorded since the time series began in 2010-11.

Freight train kilometres by FOC, Great Britain, 2010-11 to 2016-17 (Table 13.25)

For more information, please see the [2016-17 Q4 statistical release](#).

Freight train kilometres by operator data cover FOCs on Network Rail infrastructure and were included for the first time in the [2015-16 Q4 statistical release](#).
2017-18 Quarter 2 Results

In 2017-18 Q2, the total volume of freight train kilometres was recorded at 8 million kilometres: the lowest Q2 since the start of the time-series in 2010-11 Q1. This was largely unchanged on the same quarter in the previous year, reducing very slightly by just 0.01 million kilometres.

DB Cargo UK and Freightliner Heavy Haul recorded their lowest volumes of freight train kilometres since the start of the time series with 3.5 and 0.5 million kilometres respectively in 2017-18 Q2.

Four out of the seven operators covered by our statistics experienced an increase in train kilometres this quarter compared to last year. Several freight contracts switched operators from summer 2016 increasing the flows for those acquiring the contracts compared to the year ending 2016-17 Q2.

DB Cargo UK and Freightliner Intermodal accounted for just under 70% of all freight train kilometres in 2017-18 Q2.

Quarterly freight kilometres by operator data are available on the data portal in: Table 13.25
5. Freight market indicators

Freight market indicators comprise three measures: the number of freight train movements on the network (data available up to 2016-17), the impact on road haulage (2015-16), and rail market share (calendar year 2015). This section is based upon annual data and is unchanged from the 2016-17 Q4 statistical release.

Number of freight train movements

Number of freight train movements, Great Britain, 2003-04 to 2016-17 ([Table 13.10](#))

### Number of freight train movements

<table>
<thead>
<tr>
<th>Year</th>
<th>Number of Freight Trains Movement (Thousands)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2003-04</td>
<td>416.1</td>
</tr>
<tr>
<td>2006-07</td>
<td>455.6</td>
</tr>
<tr>
<td>2009-10</td>
<td>265.6</td>
</tr>
<tr>
<td>2012-13</td>
<td>282.3</td>
</tr>
<tr>
<td>2015-16</td>
<td>223.8</td>
</tr>
</tbody>
</table>

During 2016-17, there were 224,000 freight movements: the lowest since the start of the time series in 2003-04, representing a decrease of 5% compared to 2015-16. The decline in coal traffic over the year is partly responsible for this downturn.

- Annual freight train movement data are available on the data portal in: [Table 13.10](#)
Impact on road haulage

In 2015-16, the number of lorry kilometres that would have been required to transport the amount of freight moved by rail was 1.7 billion kilometres: a 19% decrease on 2014-15. This is the lowest recorded since the start of the time series in 2004-05.

There were 7.8 million lorry journeys avoided in 2015-16 through the use of rail freight: 21% lower than the previous year. 2015-16 recorded the lowest number of avoided lorry journeys since 2004-05.

- Annual impact on road haulage data are available on the data portal in: Table 13.8

Rail market share

In 2015, 5% of all freight lifted\(^6\) was on rail, with 97 million tonnes. The proportion of freight lifted on the rail network fell by 1.2 percentage points compared to 2014. Between 2014 and 2015, road freight (HGV) increased by 1.4 percentage points.

In 2015, 10% of all freight moved was on the railway network, with 19 billion net tonne kilometres. The proportion of freight moved by rail decreased by 2.4 percentage points compared to the previous year. Between 2014 and 2015, road freight (HGV) increased by 1.6 percentage points.

- Annual rail market share data are available on the data portal in: Table 13.12

Revisions: There have been some minor revisions to the previously published dataset. Further details can be found at: Revisions Log.

Methodology: For more information on data collection and the methodology used to calculate the statistics in this release please see the accompanying Quality Report.
Annex 2

Statistical Releases

This publication is part of the statistical releases which cover the majority of reports that were previously released through the Data Portal. The statistical releases consist of four annual and four quarterly themed releases:

**Annual:**
- Rail Finance & Rail Fares Index;
- Rail Safety Statistics;
- Rail Infrastructure, Assets and Environmental;
- Regional Rail Usage.

**Quarterly:**
- Passenger and Freight Rail Performance;
- Freight Rail Usage;
- Passenger Rail Usage;
- Passenger Rail Service Complaints.

A full list of publication dates for the next twelve months can be found in the release schedule on the ORR website.
National Statistics

The United Kingdom Statistics Authority designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the Authority’s regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is ORR's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

For more details please contact the Statistics Head of Profession Abby Sneade on 020 7282 2022 or contact rail.stats@orr.gsi.gov.uk.

The Department for Transport (DfT) also publishes a range of rail statistics which can be found at DfT Rail Statistics. They also publish road freight statistics which can be found at Road freight: domestic and international statistics.
