

POLICY REVIEW:

Summary of the Policy Review Working Groups – Seminars for Ministers below Cabinet level

February 2007

This paper is based on material discussed in the working groups with junior ministers for the Policy Review. The paper is not a statement of policy.

Contents

Introduction

Emerging themes from the Policy Review working groups

Conclusion

The Policy Review is taking a broad look at the challenges for the UK in the next 10 years and beyond

- The Policy Review has proved a unique - and unprecedented - opportunity for an incumbent government to examine its policies across both domestic and international fields
- To date, the 6 policy reviews have produced over 40 expert papers with 11 overview papers for the Cabinet level working groups, from across a wide range of government departments

Cabinet level working groups

Seminars with junior ministers

Papers from across Whitehall

Public engagement process

The purpose of today's session is to take stock of the key policy themes emerging from the Policy Review seminars with junior ministers

- To date, there have been 11 Policy Review seminars with junior ministers, with around 130 ministerial attendances, and 23 presentations given by external expert speakers
- The findings are grouped into five themes, each with specific policy ideas:

Empowerment and information

Quality of life

Inequality

Culture and behaviour change

A self confident Britain

- In addition to today, the conclusions from the seminars and public engagement strands will be presented to Cabinet as part of the final Cabinet level working group on 8th March

Contents

Introduction

Emerging themes from the Policy Review working groups:

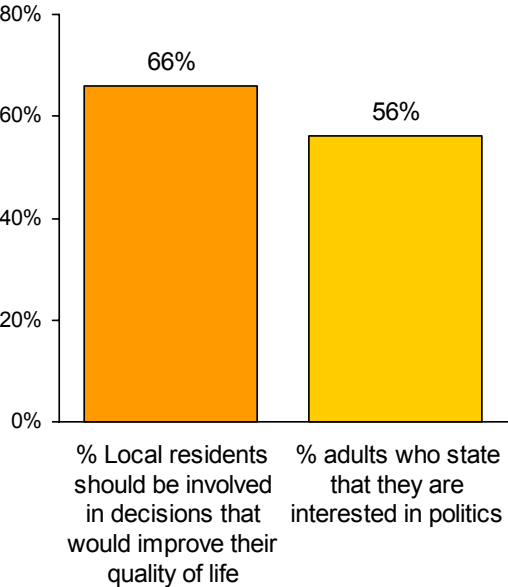

- **Empowerment and information**

- Quality of life
- Inequality
- Culture and behaviour change
- A self confident Britain

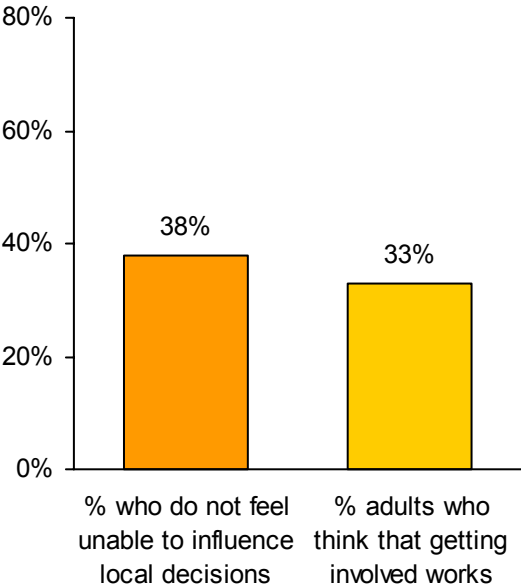

Conclusion

Political efficacy – or people’s belief in their capacity to influence the world – is in decline

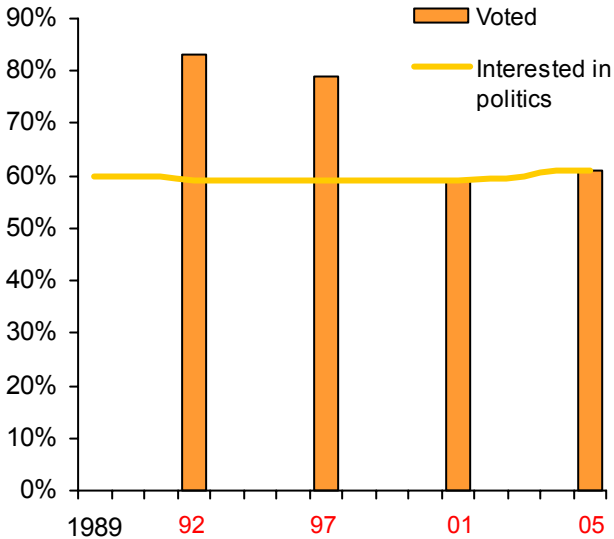

Most citizens are in favour of involvement in decision-making at local level and are interested in national politics
Percentage¹

But, few feel able to influence decisions
Percentage¹

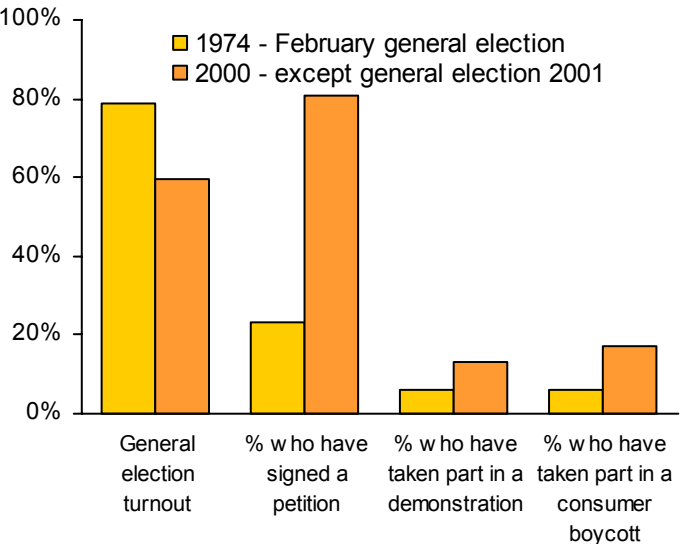

Although interest in politics has stayed roughly constant, voter turnout has fallen
Percentage³

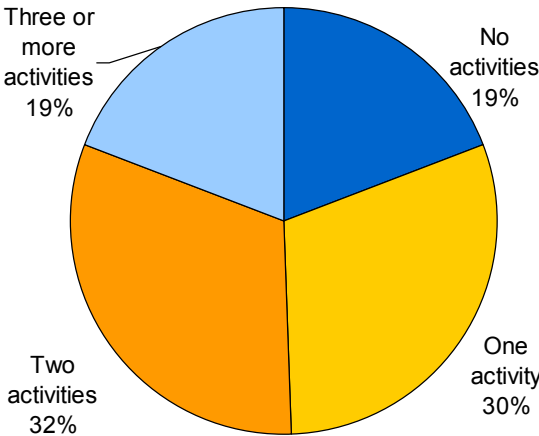

- There has been a long term decline in people’s belief in their capacity to influence the world – membership of political parties has fallen from 1 in 11 in the 1950s to 1 in 88 today²
- Citizens’ interest in politics does not seem to have declined – but they are voting less
- **Government needs to find ways to improve opportunities for citizens to influence**

Other forms of engagement are growing, and new forms of engagement are emerging

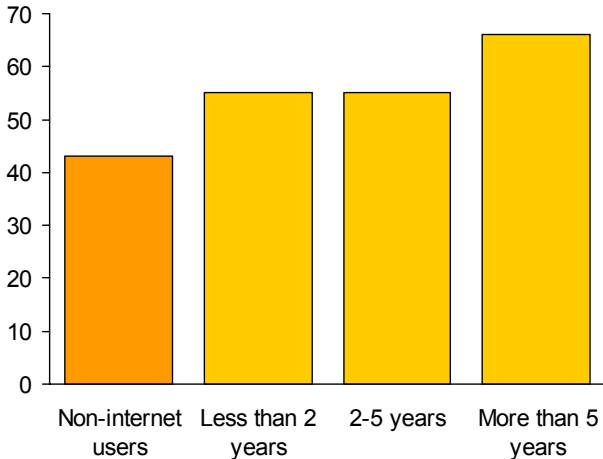

While electoral activity has declined, pressure activity has increased recently
Percentage¹

A majority of people are involved in civic participation and/or formal or informal volunteering
% of respondents²

Length of internet use is significantly correlated with membership of community organisations
Percentage of population³

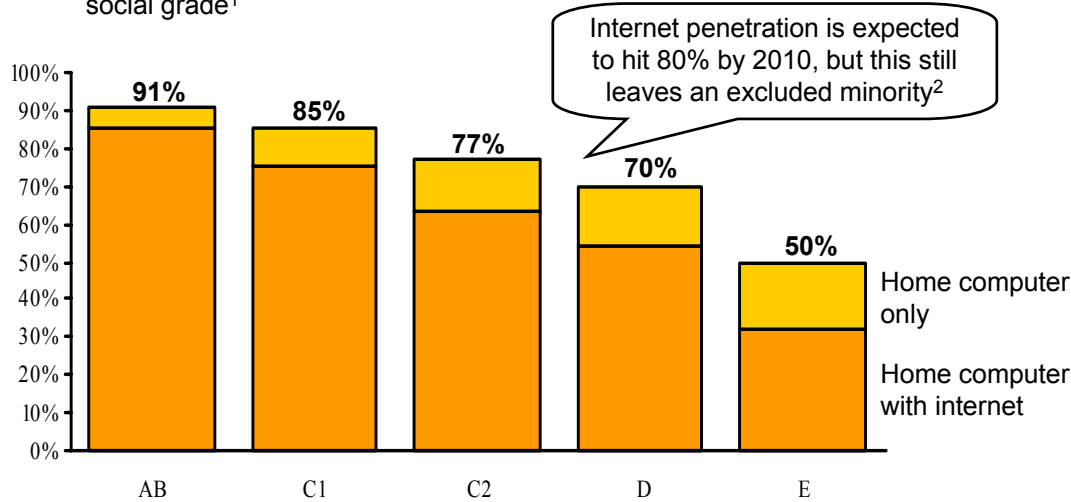

- New forms of political engagement – and citizen-to-citizen engagement - are growing, ranging from special interest groups and NGOs to web forums and online groups
- The ability to e-petition Number 10 has improved access and enabled Government to respond directly to petitioners by email – but any opening up of this kind also carries risk
- **The challenge for Government is to find ways to tap into citizens' engagement**

As the use of technology develops and becomes more central to daily life, government needs to determine how to respond

There is a wide digital divide in access to computer technology

Families with home computers and the internet by social grade¹

And while there are many innovative new services – such as ‘netmums.com’ – these are outside of government influence

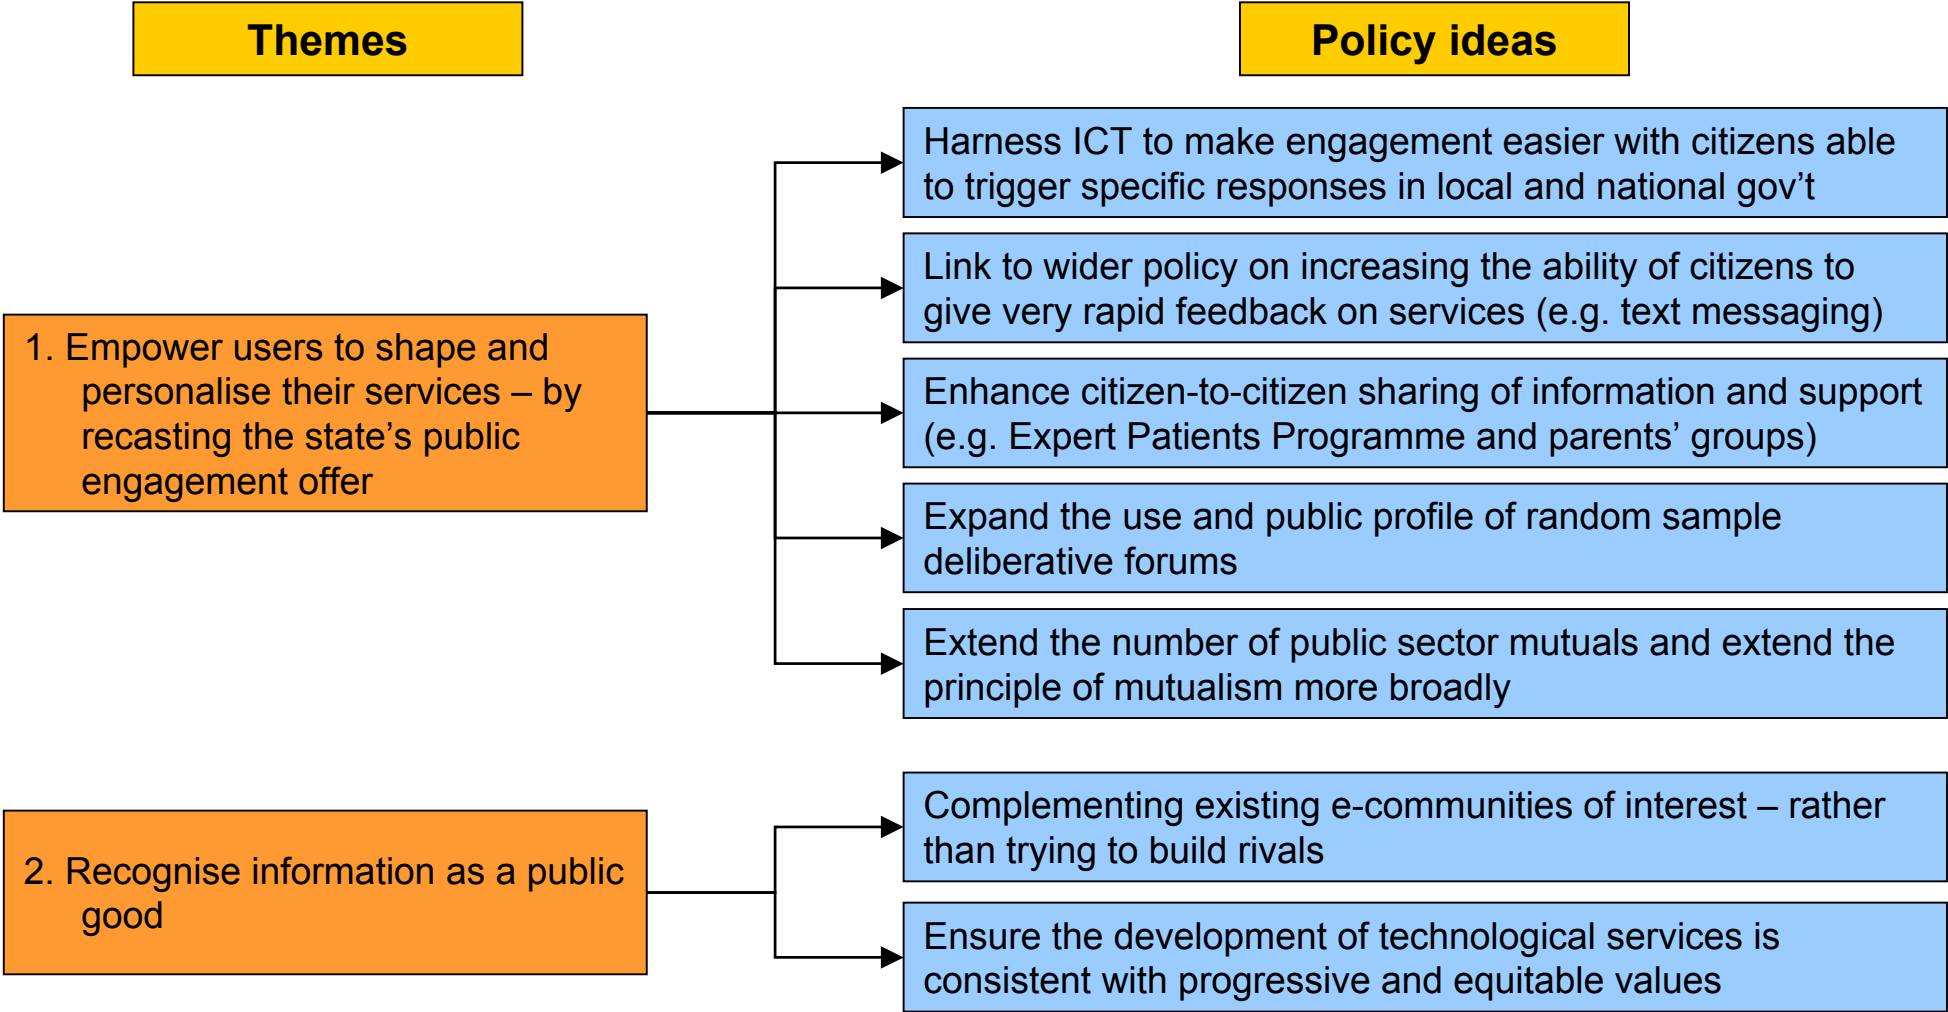

- Around 2.7m families are ‘digitally excluded’, of which 1.5m are on the highest level of tax credit¹
- The best use of technology will be simple and located where the citizens expect to find it, and can radically change people’s everyday lives
- This is not about involvement in a traditional sense – it is about responding to empowered citizens expressing their views
- **The key challenge will be using new technology to help transform delivery of services and make government services accessible in a way that addresses the digital divide**

Policy ideas – progressively empowering citizens in their daily lives

Contents

Introduction

Emerging themes from the Policy Review working groups

- Empowerment and information

- **Quality of life**

- Inequality

- Culture and behaviour change

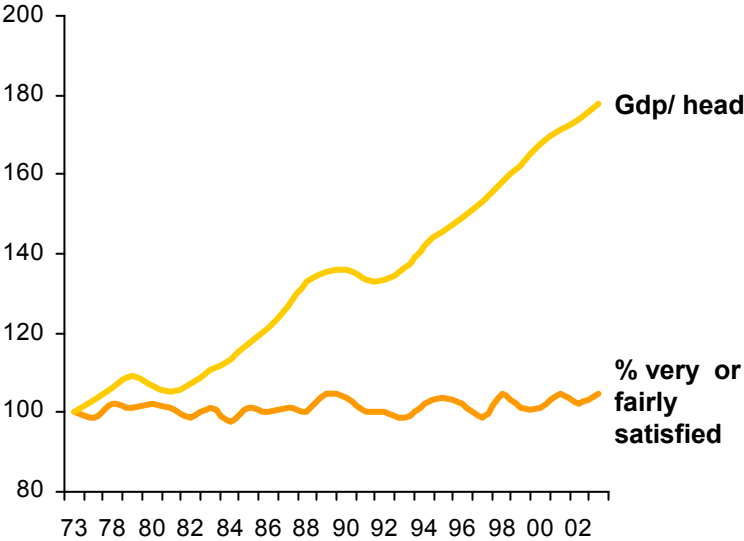

- A self confident Britain

Conclusion

While material standards of living have inexorably risen, life satisfaction has not – with 1 in 6 adults suffering from depression or anxiety

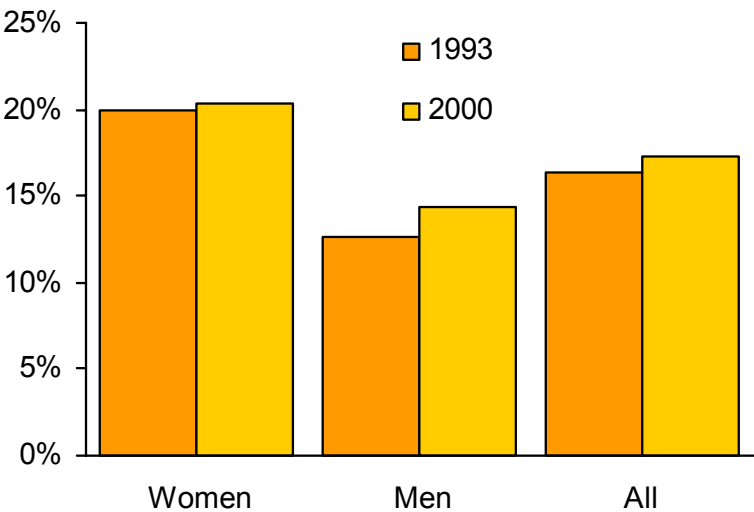

Life satisfaction has remained constant – despite massive gains in material standards

Rebased 1973 = 100¹

There are 6 million people suffering from depression or anxiety

Percentage suffering from neurotic disorder (aged 16-64)²

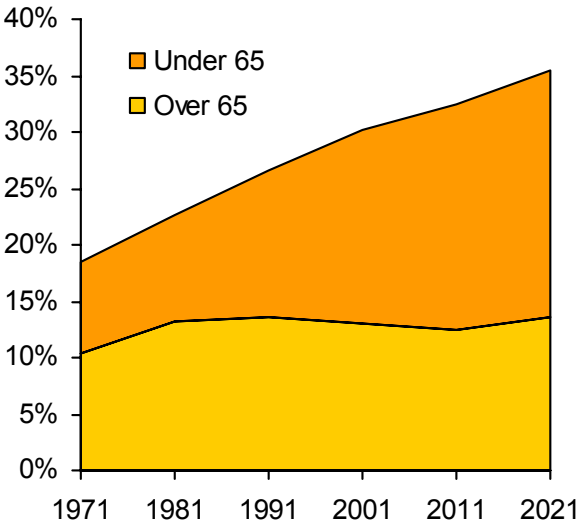

- The key factors in life satisfaction are family relationships, work and the community, with actual level of wealth much less important than relative wealth or perceived status
- Historic increases in family break-ups, falling job satisfaction and social trust, people are no happier now than they were fifty years ago
- **There is a challenge for Government to increase well-being through policy areas such as mental health, parenting and quality of working life**

There is perceived pressure on parents and family life

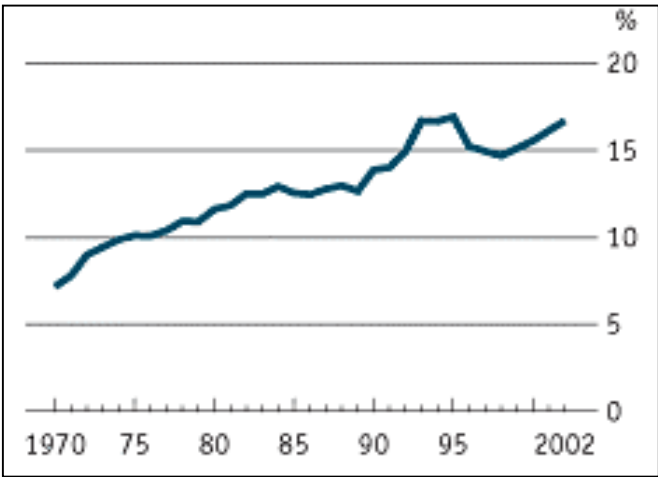

Beanpole families and one person households are increasingly the norm

Proportion of one person households 1971-2021¹

Insecurity is on the rise for hard working families

Chances of an average worker facing a 50% or greater drop in family income over time²

[NB: based on US data]

And there are more time pressures on family life

Time Bank surveys³

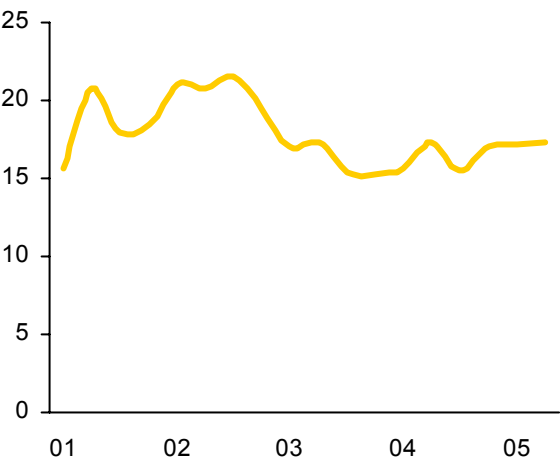

- 56% of mothers find it harder for them to balance work/family lives than 30 years ago
- 49% parents didn't know where children are, who they were with or what they were doing after school, at weekends, in holidays
- 64% of adults report that their jobs interfere with their family lives

- More people are living on their own, marrying later, and cohabiting for longer
- Families are shifting to a 'beanpole' structure – becoming smaller, more geographically dispersed and more focussed on immediate parents, on fewer children and on grandparents – increasing vulnerability to loss of income
- **There is a challenge for Government to create more flexibility in family support**

Improving quality of life at the neighbourhood level will be critical

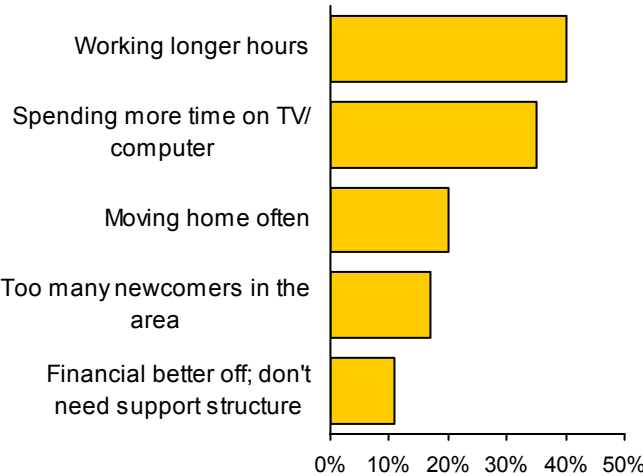

Perceptions of anti-social behaviour have fallen since 2001, but one in six still say that it is a problem in their area

% saying ASB very/fairly big problem in their area¹

People attribute breakdown of community to broader social changes

% raising as a concern²

There are several factors associated with high satisfaction with a neighbourhood³

- People who rated **the general appearance of an area** as less than “very good” were 4 times more likely to be less than very satisfied with their neighbourhood
- People who were less than very satisfied with their **home** were 3 times more likely to be less than very satisfied
- People who said that **noise** was a problem were 1.8 times more likely to be less than very satisfied

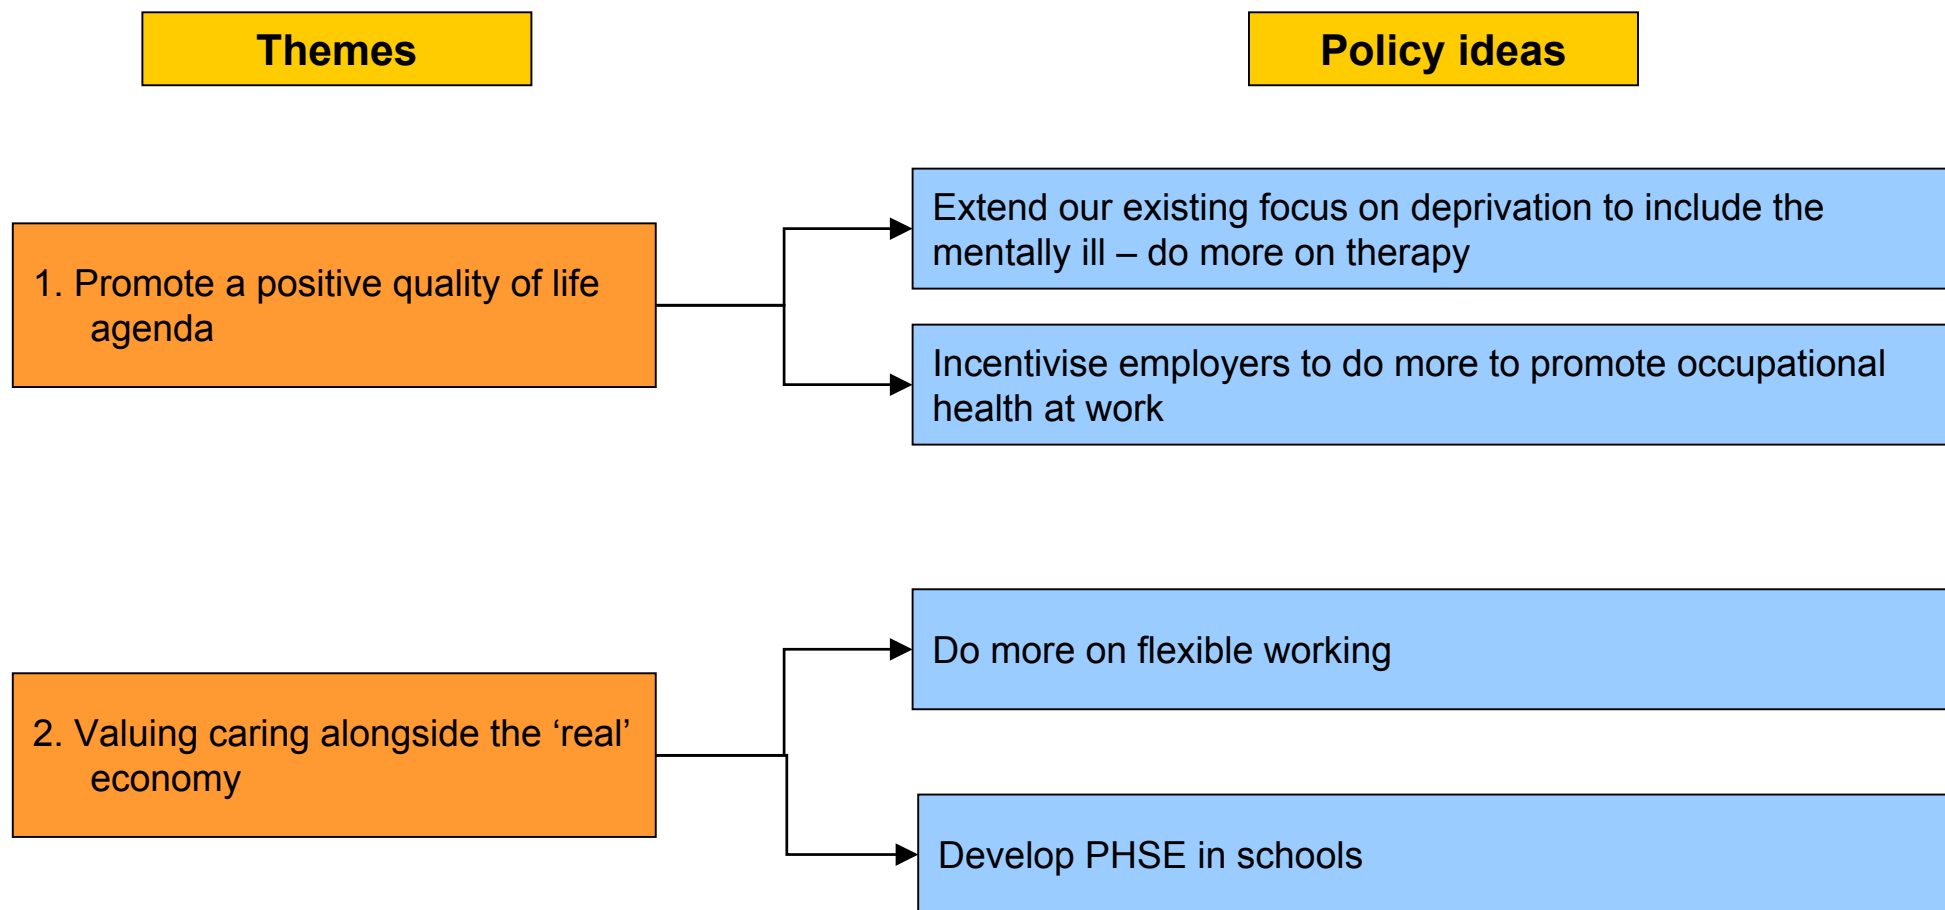

- Many key determinants of life satisfaction are closely associated with local neighbourhoods – such as immediate neighbourhoods and friends, the quality of the built environment and perceived level of safety. In many cases this is about improving local positive effects, rather than stopping local bad effects on satisfaction
- **The mark of success for the Government’s Respect agenda will be when the focus of debate is not mitigating neighbour ‘bads’, but promoting neighbourhood ‘goods’**

3 - Examples from an ESRC Centre for Neighbourhood Research Study

Policy ideas – promoting the wellbeing agenda

Contents

Introduction

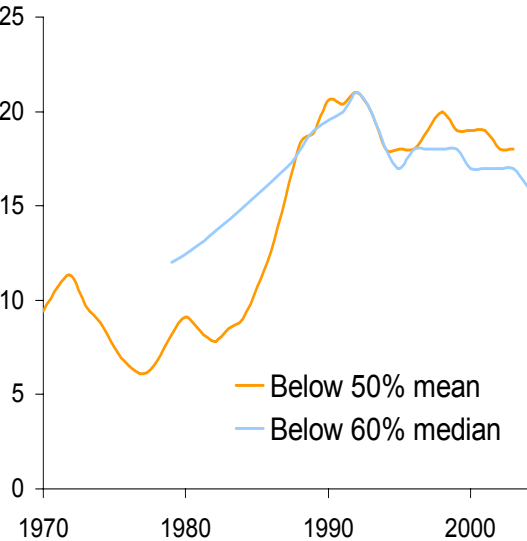

Emerging themes from the Policy Review working groups:

- Empowerment and information
- Quality of life
- **Inequality**
- Culture and behaviour change
- A self confident Britain

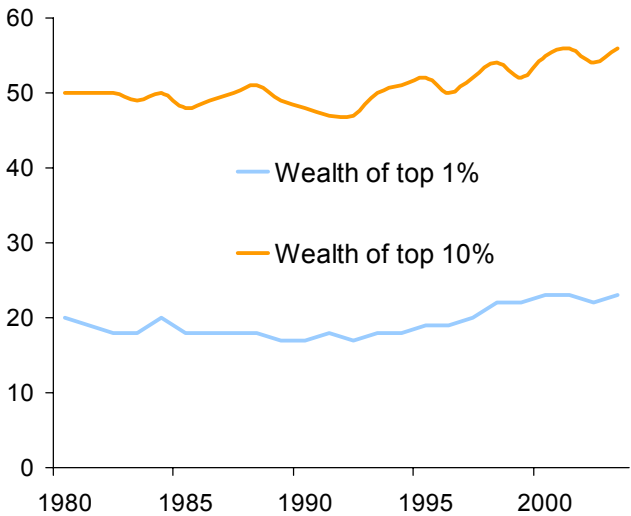

Conclusion

While there has been marked progress on income inequality, capital inequality has grown

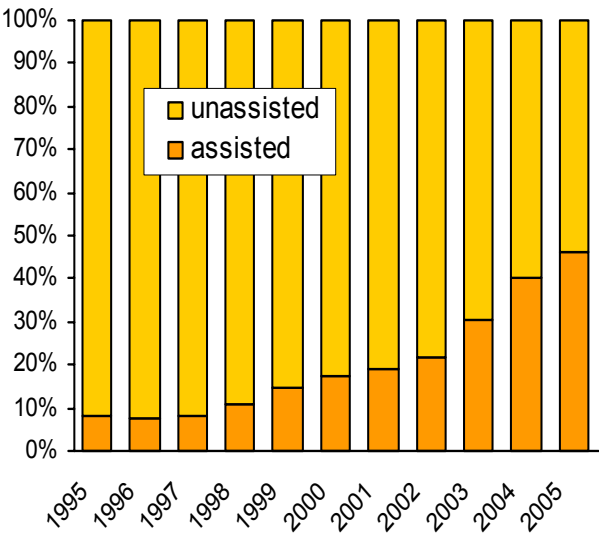

Tax and welfare policy has halted the growth of income inequality, contributing to the fall in poverty
% of population in relative poverty¹

But wealth distribution started widening in the mid-1990s
% of total marketable wealth²

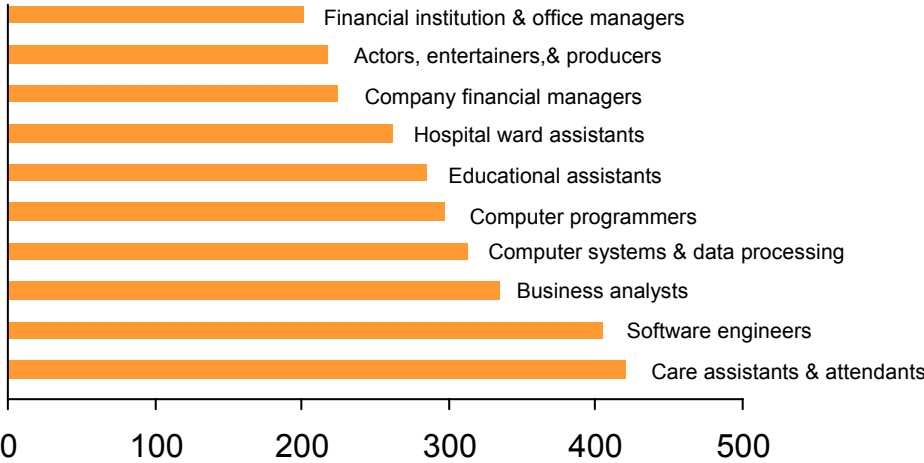

High house prices are making it harder to get on the property ladder without assistance
% first time buyers³

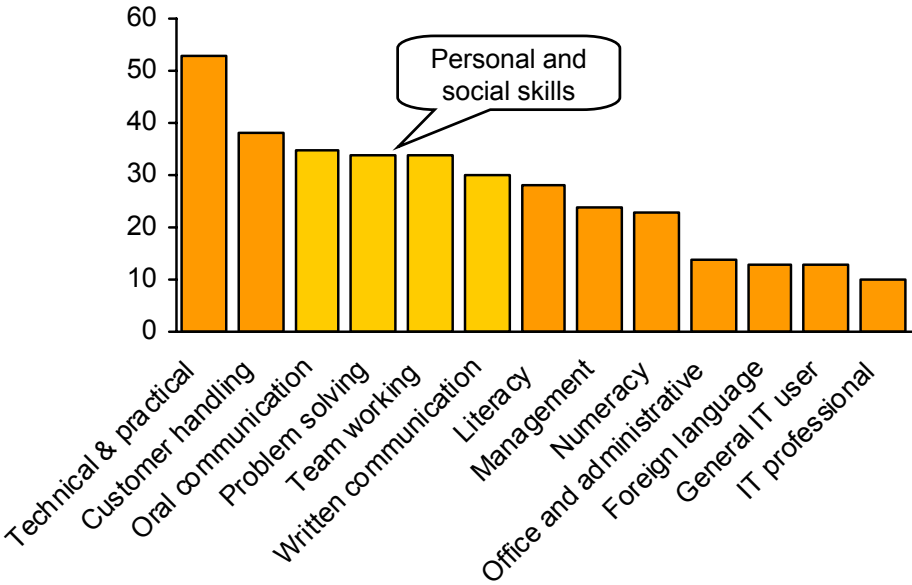

- Half of first-time buyers under 30 now receive assistance – with deposits of £34,000 versus £7,000 for those who are not assisted³
- **These trends, coupled with future pressures on spending, will require some tough choices in order to sustain the progress made in tackling inequality**

Personal and social skills are emerging as a key driver of inequality

Knowledge economy jobs have expanded significantly
% increase in the UK's top ten occupations by growth (79 - 99)¹

Personal and social skills seen as a key gap by employers
% of employers citing as a gap²

- 52% of employers are dissatisfied with school leavers' employability skills²
- But, differences in personal and social skills are affecting social mobility – these are now 33 times more important now than before in determining life chances³
- **Addressing these skill gaps will be vital for success in a global economy**

1 - Goos and Manning, LSE, 2003

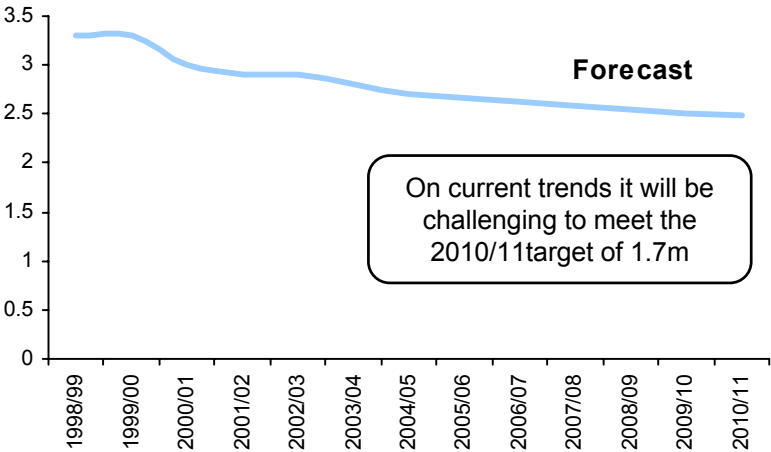

2 – National Employers Skills survey (2005)

3 – CMPO/ British Cohort Study

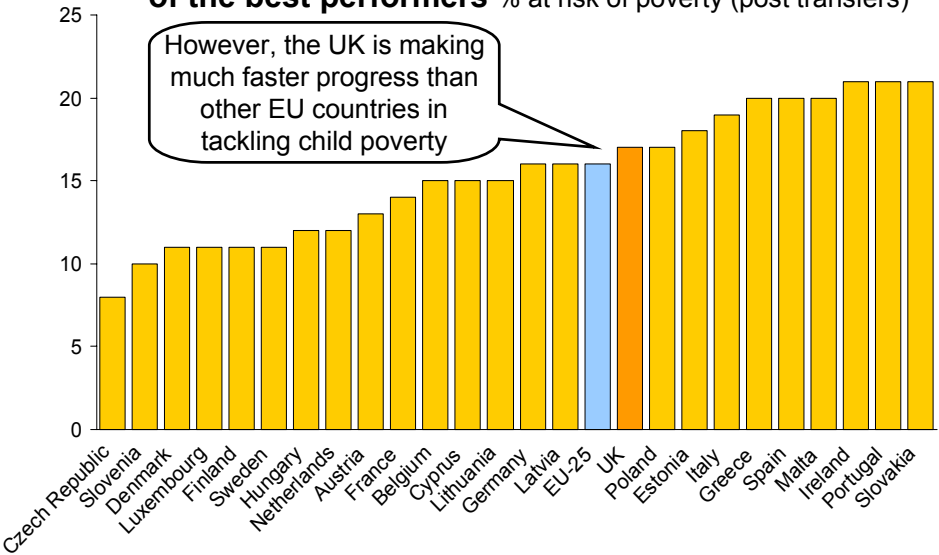

Meeting challenging child poverty targets will be extremely difficult

We've made progress on child poverty but the 2010 target is still challenging

Number of children, million¹

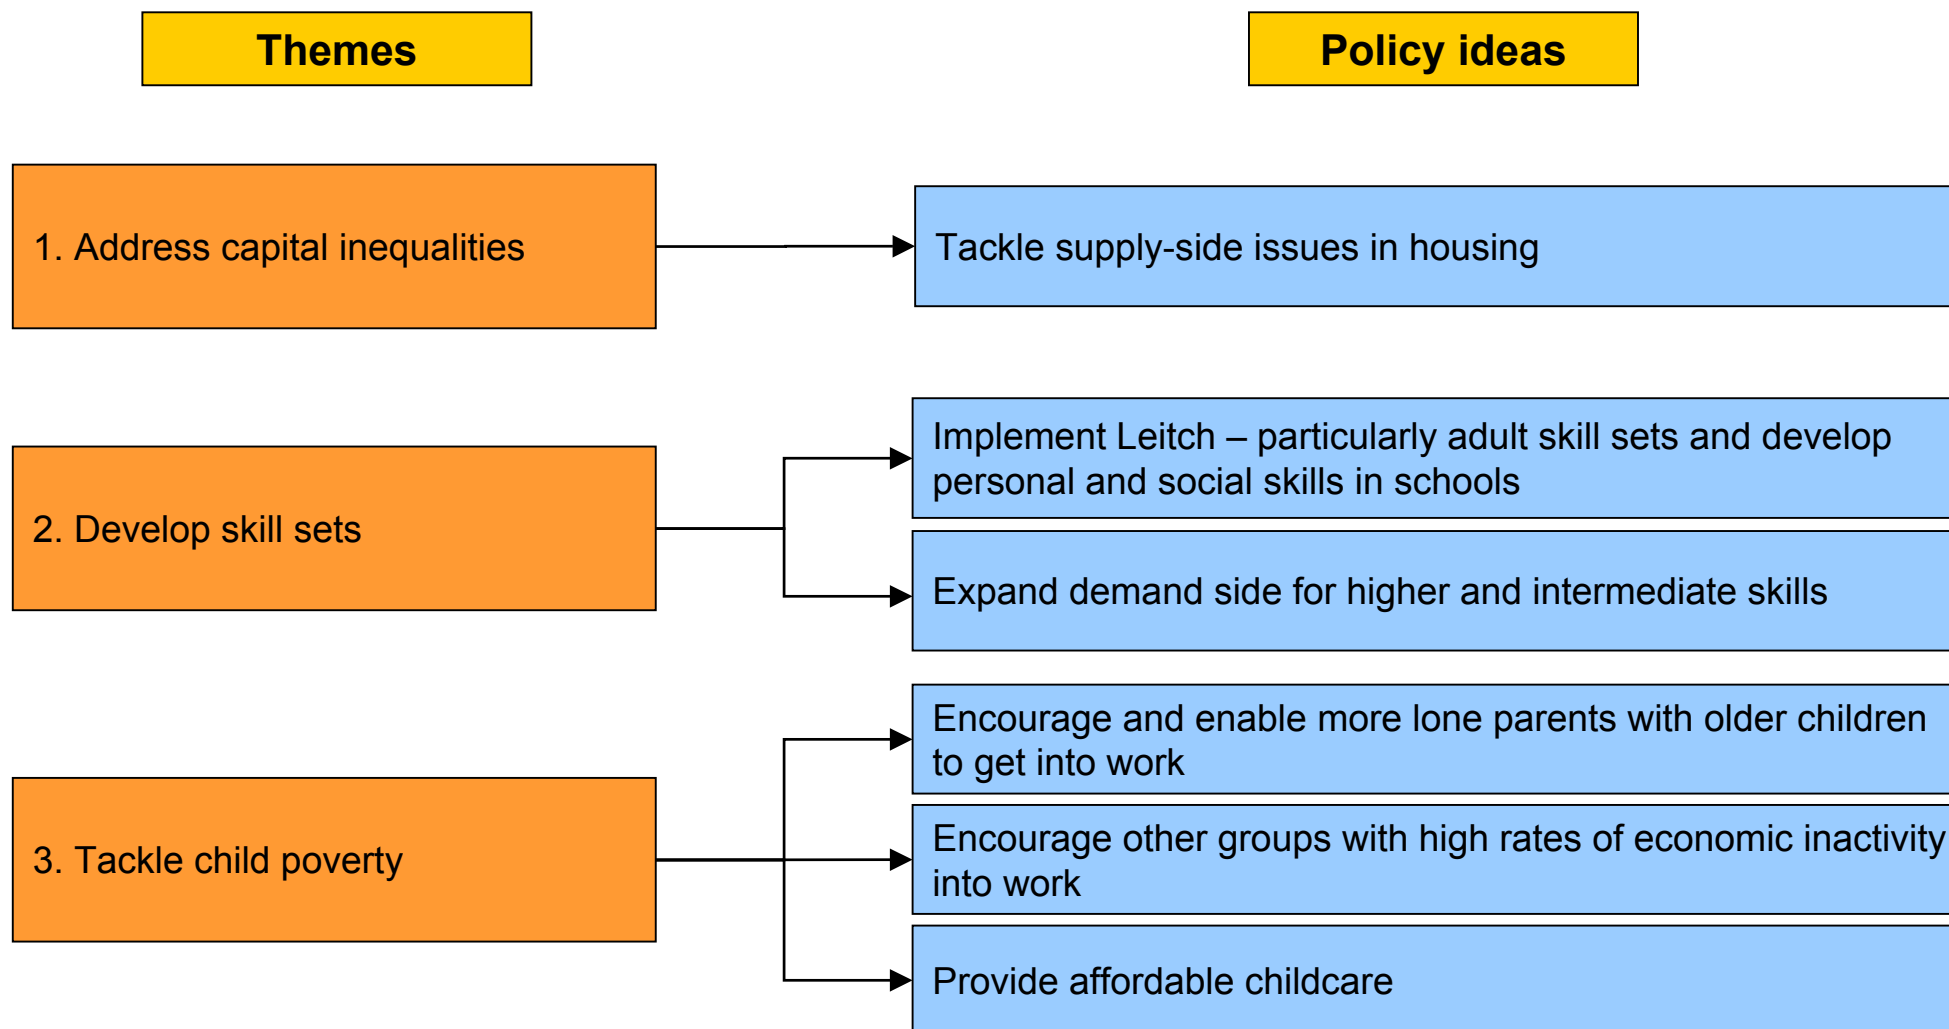

The UK has a marginally higher risk rate of child poverty than the EU average, but almost twice that of the best performers % at risk of poverty (post transfers)¹

- Over 700,000 children have been lifted out of poverty since 1998. But, meeting the 2010 target will be challenging and will require even faster progress¹
- The government has a clear responsibility to tackle child poverty
- **The challenge for Government is to further reduce child poverty, for example through providing affordable childcare and encouraging people into work, within the tight spending outlook**

Policy ideas – renewing the drive on inequality

Contents

Introduction

Emerging themes from the Policy Review working groups

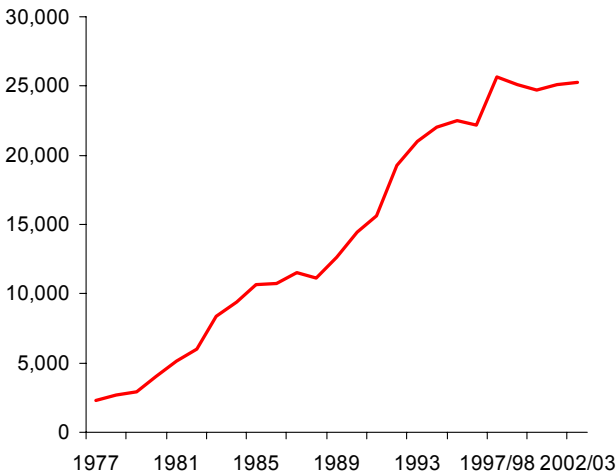

- Empowerment and information
- Quality of life
- Inequality
- **Culture and behaviour change**
- A self confident Britain

Conclusion

Increasingly, achieving positive public policy outcomes rest heavily on public behaviour

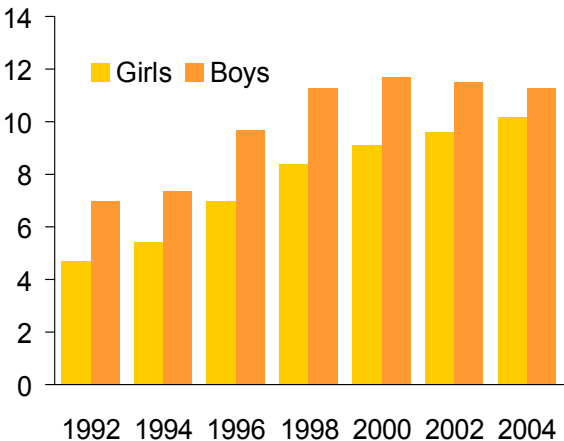

Medical treatment for 'lifestyle' diseases has increased significantly

Coronary artery bypass surgery numbers¹

Many of these lifestyle changes start in adolescence

Average UK alcohol consumption for children aged 11 - 15 who drank last week (units of alcohol)¹

Even when the public are well-informed, they do not always act accordingly

base: c1000 adult³

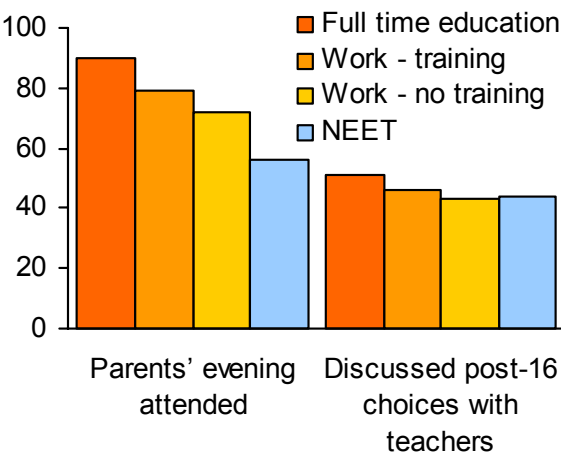

- **70% agree that eating a healthy diet involves eating more fruit and vegetables**
- **51% agree that it involves avoiding too much fatty food**
but
- **67 % of men and 59% of women in England are overweight**

- Chronic care including diabetes, heart disease, lung disease and cancer costs the NHS 80% of its budget – and this is set to grow²
- Obesity has trebled in the UK over the last 25 years²; drug and alcohol deaths are among the highest in the EU
- **Changes in lifestyle, particularly in the health services, will therefore require an increasing emphasis on promoting individual responsibility**

Cultures of ‘low aspirations’ are detrimental to outcomes – particularly health and education – but are becoming more endemic

Parental aspirations and involvement are important drivers of outcomes

Percentage of parental involvement by socio-economic status¹

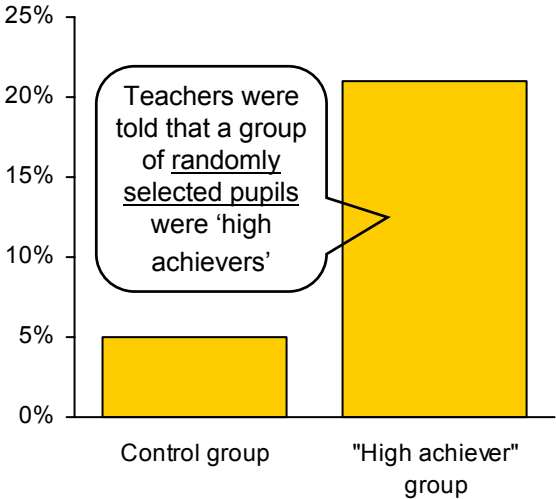

Peer pressure effects are the strongest driver of low aspirations cultures

Increase in the likelihood of a child smoking if the child is² ...

... troubled	+ 14%
... has a parent who smokes	+ 26%
... has 2 friends that smoke	+ 1000%
... has 3+ friends that smoke	+ 2400%

Aspirations of professionals significantly affect outcomes

Increase in attainment gains of thirty or more percentage points over the year³

- Parents from lower socio-economic groups tend to be less involved in their children's learning, which is a key predictor of educational attainment
- Low aspirations cultures are particularly hard to break out of where there are strong countervailing peer pressure effects or professional expectations
- **The challenge for Government today is increasingly about addressing the underlying low aspirations cultures, in addition to providing opportunities to all**

1 - Young People not in Education, Employment or Training: Evidence from the Education Maintenance Allowance Pilots Database. DfES. 2005

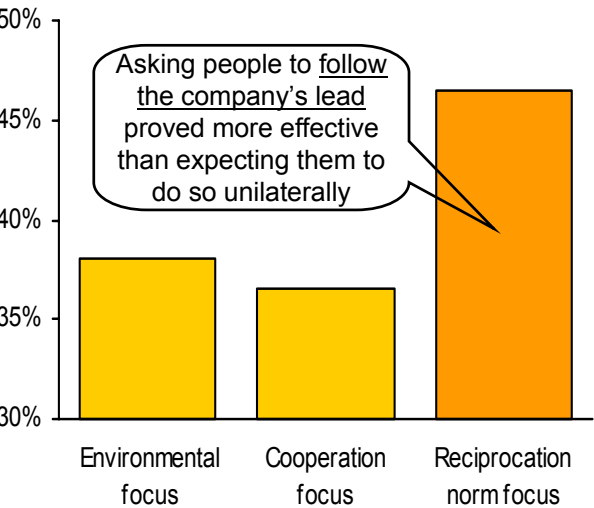

2 – Caldini, R - *The Psychology of Persuasion*

3 – Rosenthal, R – Teachers' Expectations: Determinants of Pupil Gains

How Government presents messages in public information campaigns is extremely important

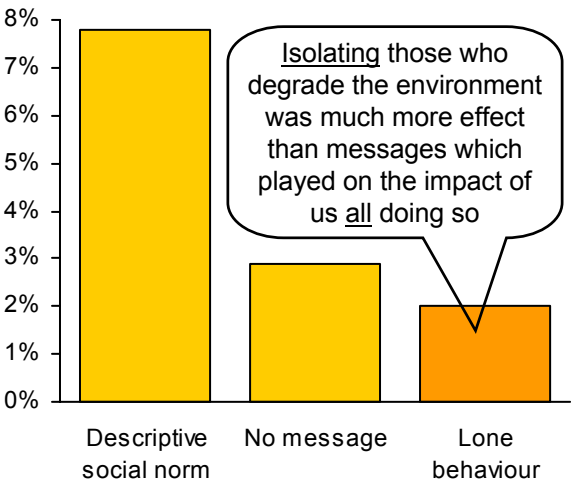

Government can encourage good behaviour by making the first move

Percentage of towel reuse in hotels¹

Government should *not* use messages that leave the impression of the negative behaviour as the social norm

Percentage of petrified wood theft¹

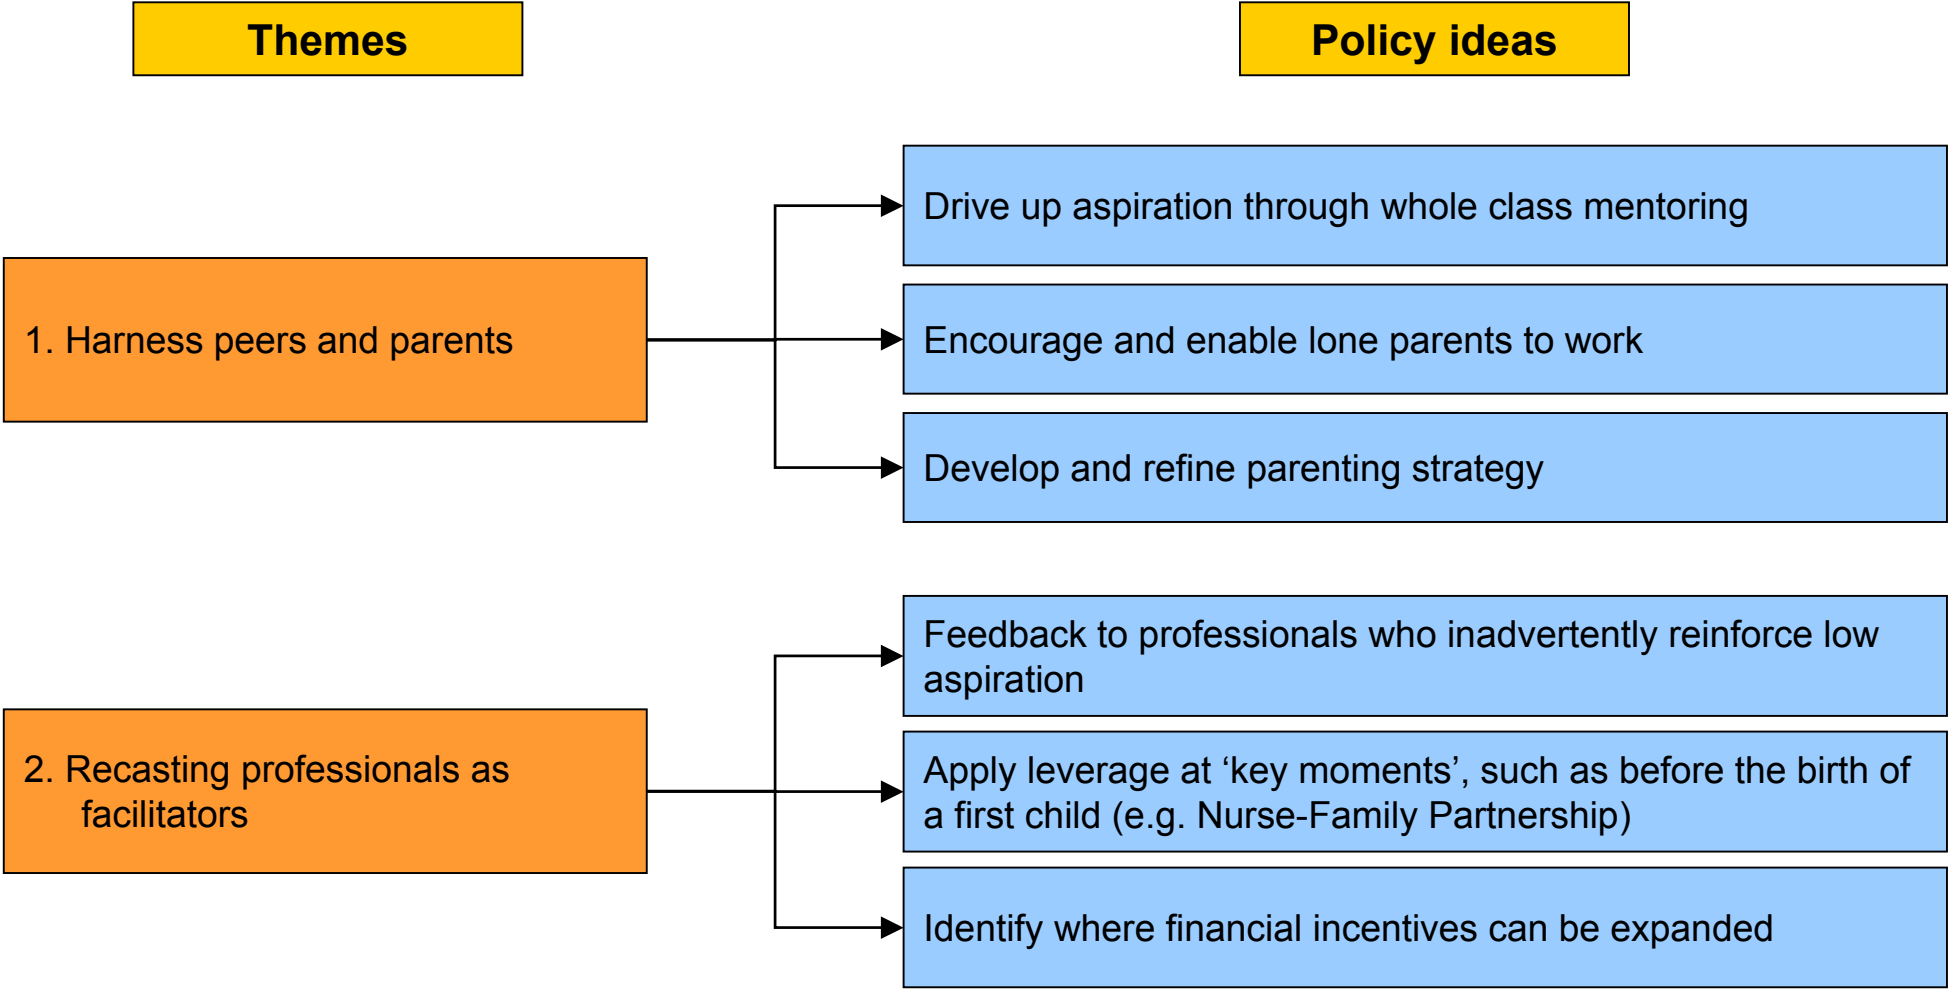

And Government should also ensure messages are *consistent, credible, and use trusted authority figures*

- Seek changes over the *long-term*, using *consistent* and *credible* government action
- Carefully *focus* the message on a target group, and where necessary on a first-mover group
- Use *trusted authority* figures and professionals to promote the message where possible

- These lessons are particularly relevant to areas like the environment and community cohesion
- Social norms can be changed, and, in some areas, citizens are looking to the state to act
- **The challenge for Government is to ensure its messages are credible, consistent, focussed, and ask for reciprocal action – and to mobilise action on a wider scale**

Policy ideas – moving away from the ‘letterbox’ model of delivery

Contents

Introduction

Emerging themes from the Policy Review working groups

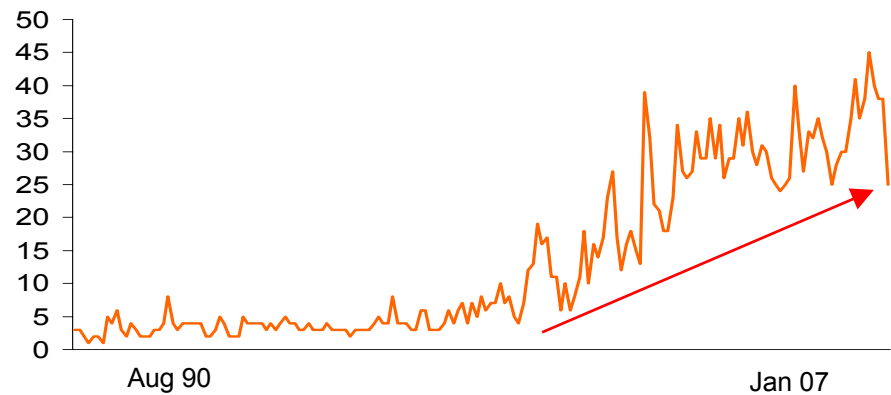

- Empowerment and information
- Quality of life
- Inequality
- Culture and behaviour change

- A self confident Britain

Conclusion

Terrorism continues to threaten the UK, while citizens increasingly consider race and immigration to be an issue of concern

% stating that race/immigration important issue today, MORI¹

Evidence shows levels of bonding within homogenous groups has a positive effect on bridging to other communities

- ‘*Bonding capital*’ means social capital within a community – it is inward looking with a tendency to reinforce exclusive identities and homogeneous groups

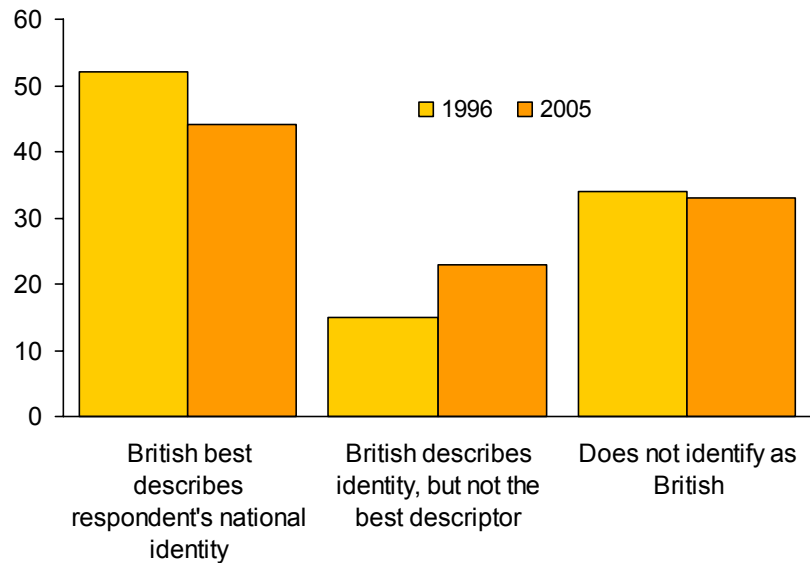

... which is positively correlated with:

- ‘*Bridging capital*’ which means social capital between communities – it looks for external associations and information dispersion

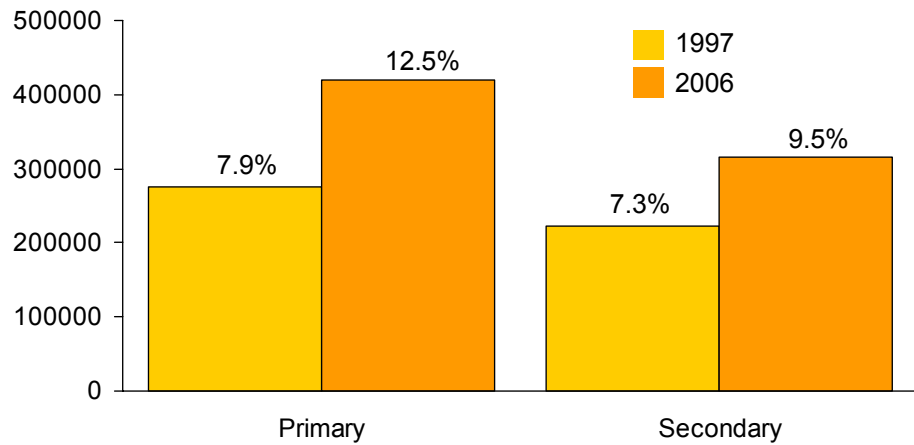

- Citizens consider race/ immigration to be one of the most important issues facing the UK
- The Security Service are tracking some 30 potential terror plots and 200 groupings or networks of interest in the UK, totalling over 1600 identified individuals in the UK². The threat from Al Qaeda and affiliated groups is real and increasing
- **The challenge for Government is to promote commonly held values to strengthen distinct communities so that they are more outwardly confident and resistant to extremism**

Creating a strong and vibrant sense of common and cohesive British values will be difficult in an increasingly pluralistic society

A large percentage of citizens do not consider themselves to be British
British Social Attitudes, 2007¹

English is not the first language of an increasing number of school pupils
Numbers not speaking English as a 1st language²

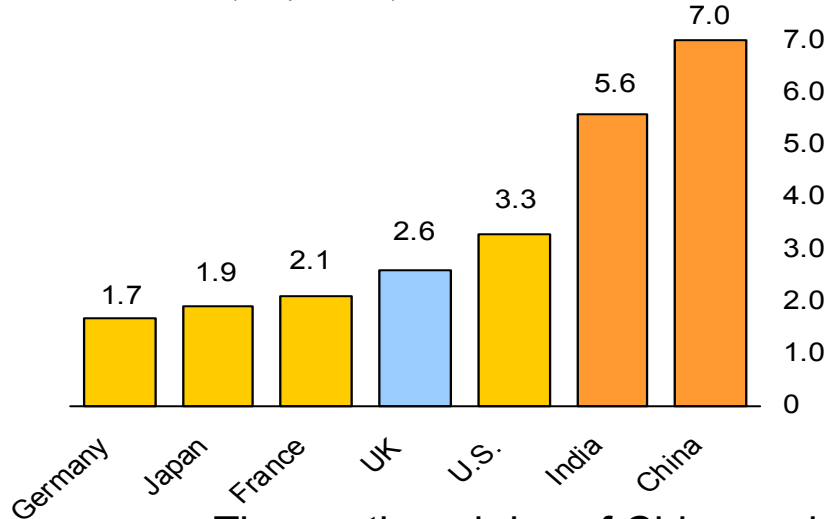

- Britain is becoming an increasingly diverse society: there are now around 4.6 m people currently living in the UK who belong to a non-White ethnic group²
- **The challenge for Government is to ensure that Britain retains a sufficiently cohesive society – which will help to guard against inequalities and prejudice, and lead to other positive outcomes**

The UK stands to gain from globalisation, but needs to recognise the continued rise of China and India

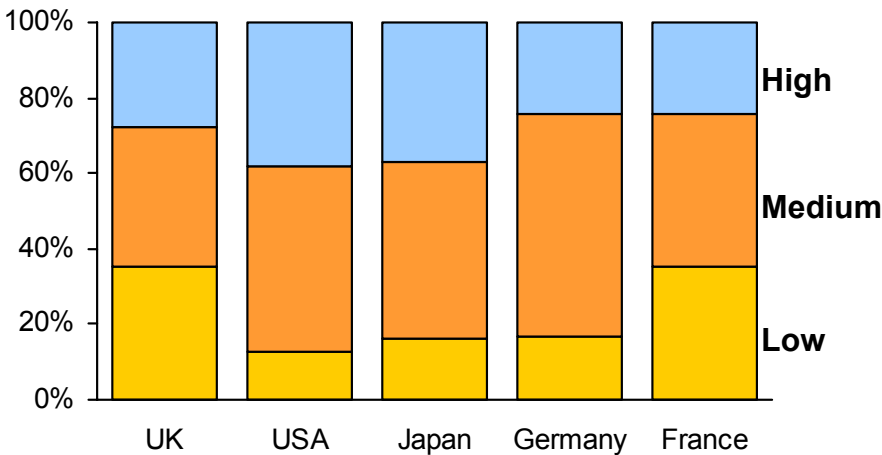

China and India will continue to grow fast over the next decade

Real GDP (compounded)¹

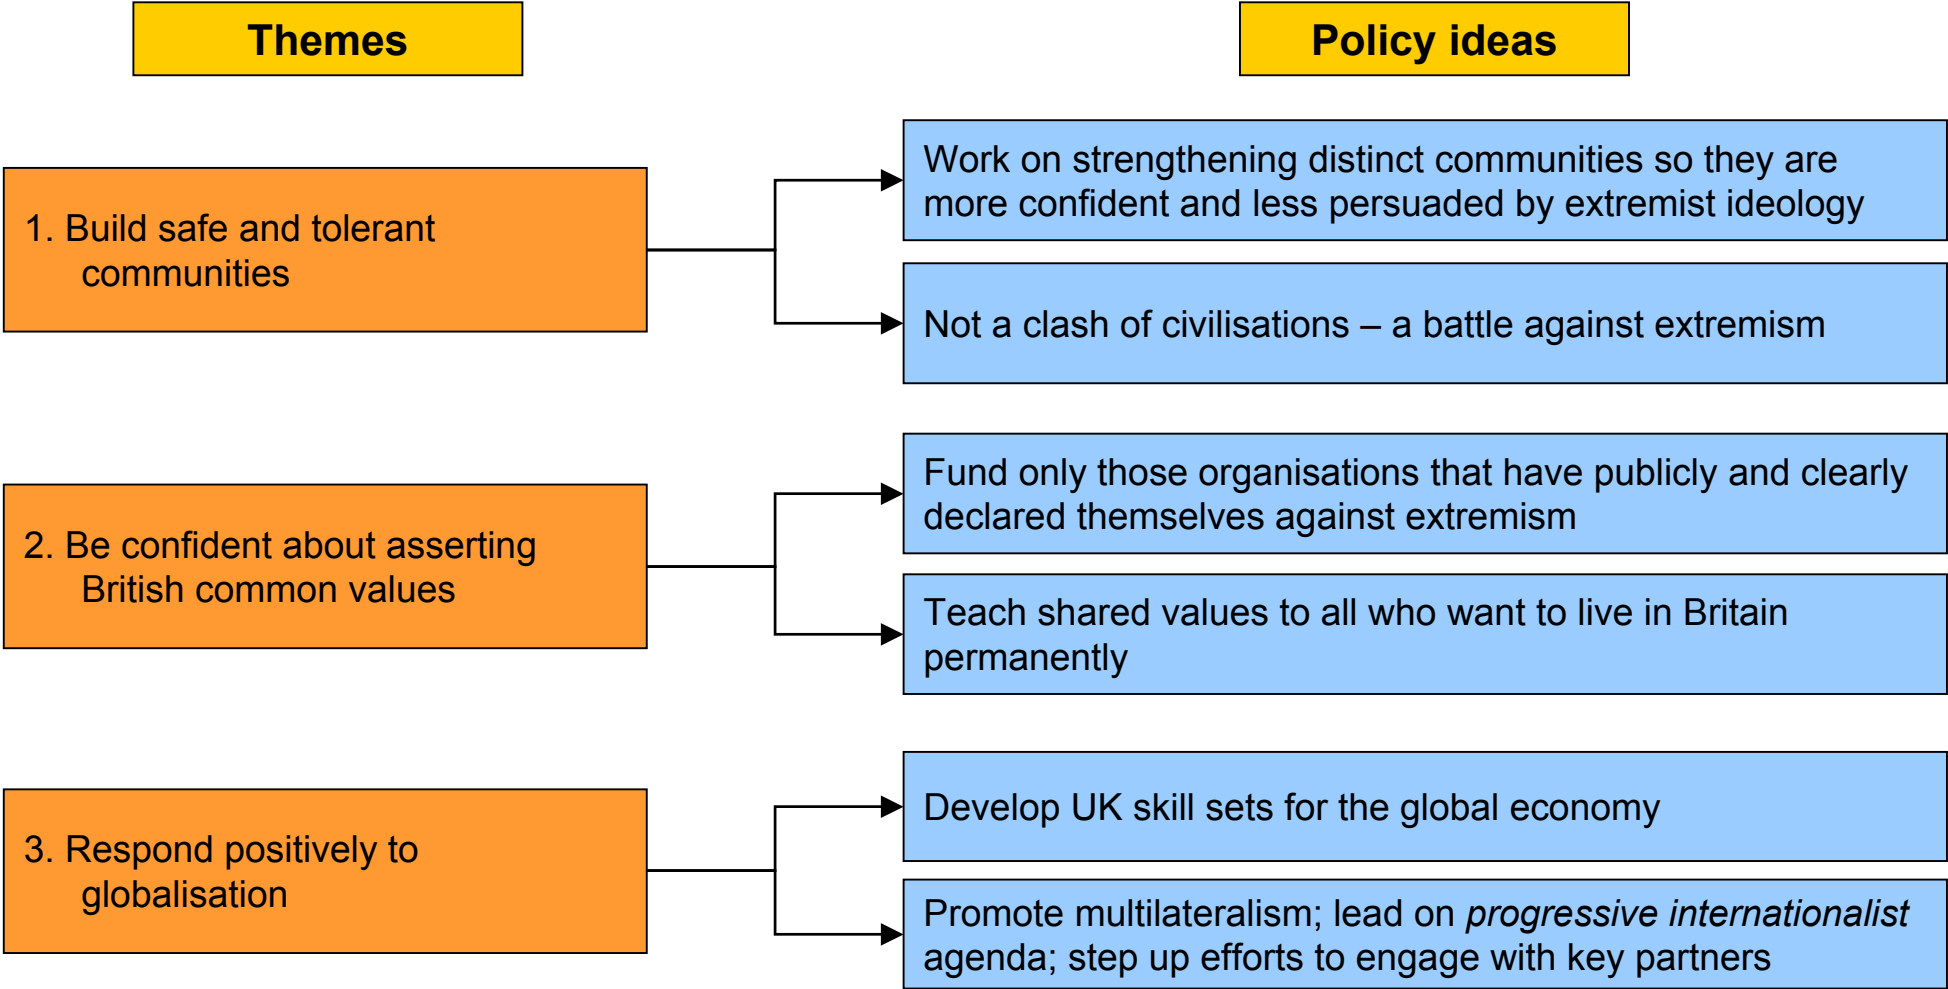

The UK's skills level need to improve to match levels in key comparator nations

Proportion of adults with skills²

- The continued rise of China and India will have far-reaching economic, international and environmental consequences (e.g. China currently generates 18% of the world's CO₂ emissions)³
- Wages in China are less than 5% of those in the UK³. Labour costs in Korea are just over half UK levels, and the proportion of graduates in the working age population is almost identical
- **The challenge to Government is to clearly 'stay the course' on globalisation, maintaining free trade, and investing in education and skills for the global economy**

Policy ideas – a strong and self confident Britain
